REPORT

TO

The Right Honourable HENRY AUSTIN BRUCE, M.P., Her Majesty's Principal Secretary of State for the Home Department, &c. &c. &c.

General Register Office, Somerset House,
1st July 1871.

SIR,

I HAVE the honour to submit to you my Annual Report for the year 1869. All the figures in my Quarterly Reports for that year have been carefully revised, and an extensive series of facts has been added, so as to present a comprehensive analysis of the most important changes in the English population.

It has been deemed right for various reasons to delay the publication of this Report until the population was ascertained, in order to introduce the necessary corrections in the dependent calculations, and it is found that in the first two years of the last decade the required correction is insig-

TABLE 1.—Estimated **Population**, with the Number of **Marriages**, **Births**, and **Deaths** registered in **England**, in each **Year** from **1838** to **1869**.

1869	21,869,607	176,970	353,940	773,381	494,828	278,553

* The Population of each of the years since 1851 is deduced from the ascertained rate of increase observed in the twenty years, 1841-61, an allowance being made for the decrease in the rate during the latter ten years. The estimates for the years subsequent to 1861 will be subject to correction so soon as the revised numbers enumerated at the recent Census, taken on 3d April last, shall be available.

nificant. In 1869, the last of the series now dealt with, the marriage, birth, and death-rates become after correction of the population 16·2, 35·3, and 23·0, instead of 16·4, 35·9, and 23·3. The error only appears in the first decimal, so the correction of the rates in the Tables is deferred until the population returns have been finally revised.

Although this element of error in the estimate of persons living in the last few years is found to be slight, consideration in detail of all calculated rates, having population for a basis, has been deferred, and attention has been principally devoted to an examination of the facts themselves.

The number of persons who married was almost the same as in the year preceding, and it was much higher than any numbers before 1864; but the number of bridegrooms and brides was much lower absolutely, and still lower relatively to population, than the numbers in the extraordinary years 1864–5–6, when the marriage-rate of England was at its maximum. The births were numerous, but not so numerous as in the previous year. The deaths exceeded the numbers in any year since 1860, their causes will be discussed elsewhere.* The excess of registered births over deaths, was 278,553 against 306,236 and 297,276 in 1867 and 1868, and was equal to 763 per day. The prosperity and health of the country suffered some depression in the year.

We cannot be surprised to find under these circumstances an increase in the flow of emigration to our enterprising colonies, and to the United States of America, where some voids had been left by the civil war. The emigrants from the United Kingdom amounted to 258,027, being at the rate of 707 daily; of these 92,555 were of English origin, 23,097 of Scotch, 75,064 of Irish, and 67,311 were foreigners; 5,975 whose birthplaces were not distinguished have been proportionally distributed in this

---

Mean . .	8·26	16·52	33·78	22·41	121	61	30	45

NOTE.—The Table may be read thus:—In the year 1838 to every 100,000 persons living there were 771 marriages or 1542 persons married, 3029 births, and 2238 deaths; the number of persons living to every marriage, persons married, birth or death, was 130, 65, 33, and 45 respectively. A correction for increase of population has been made in calculating the above results; no correction, however, has been made for leap years.

statement. Of the adult emigrants, 60,464 were married; 99,524 were bachelors, 39,392 were spinsters; 21,597 were boys and 19,265 girls, of

* In the case of mixed marriages between Protestants and Roman Catholics some couples are married twice, and are counted twice in the Registers.

the age one to 12 years; 11,849 were infants in arms; while the ages of 3836 males, 2100 females were not distinguished.

While the increase over the previous year in the total number of emigrants was large, amounting to 61,702, it was more especially marked in those of English origin, the number of whom rose from 60,265 in 1868 to 92,555 in 1869.

The United States attracted 203,001 of the emigrants, 33,891 went to British North America, 14,901 to the Australian Colonies, and 6,234 to various other places; 5,463 sailed from ports at which there were no Government emigration officers. Details showing the occupations, sex, and ages of the emigrants are given in tables at pages lxiv–v.

I will now notice more particularly the marriages out of which future births spring, and the facts respecting the 773,381 children that entered England by birth, as well as the 494,828 persons of all ages and classes who quitted its villages and cities by death.

The national registers thus received in 1869 an addition of one million six hundred and twenty-two thousand one hundred and forty-nine names, raising the aggregate number since the commencement of civil registration in 1837 to *forty-three millions six hundred and seventy-five thousand and thirty-five.*

The principal features presented by the meteorology of the year are described in the Summary of the Quarterly Reports, pp. xxxix–lvi, and are exhibited in Mr. Glaisher's Tables, pp. lxx–lxxiii. The mean temperature of the air at the Royal Observatory, Greenwich, was 49°·5 or 0°·1 above the average: 24·0 inches of rain fell, being 0·2 below the average.

* The proportion of Widowers and Widows in the Year 1841 is for the September and December quarters only.

The price of wheat was considerably lower than in the previous year. The fall which commenced in the latter part of 1868 continued in the early part of 1869: in the first three months the price averaged 50*s.* 2*d.* per quarter, in the next three months 45*s.* 7*d.*, in the third quarter

---

41	Westmorland	12·32	90·2	85·5	4·90	16·67	10·78	6·62
	XI.—MONMOUTHSHIRE AND WALES.							
42	Monmouthshire	16·84	64·7	53·3	7·31	26·47	12·83	9·05
43	South Wales	15·30	70·1	53·6	7·45	19·04	13·47	9·93
44	North Wales	12·94	71·2	60·2	4·40	12·46	15·15	8·06

The Table may be read thus by omitting the decimal points:—In England, among every 100,000 persons living 1618 persons were married; of 1,000 men married 801, of 1,000 women 724, signed the marriage register by writing their names; of 1,000 men married 72 were not of full age, of 1,000 women married 224 were not of full age; of 1,000 men married 140 were Widowers, of the same number of women married 95 were Widows.

50*s.* 11*d.*, and in the last three months 46*s.*; the average for the year being 48*s.* 2*d.* per quarter compared with 63*s.* 9*d.* in the previous year. The wholesale price of potatoes also fell from 137*s.* 6*d.* per ton in 1868 to 99*s.* 6*d.* in 1869. The returns of pauperism show a slight increase, the average numbers of persons receiving relief on the last day of each week, being 149,207 in-door, and 815,570 out-door, against 148,511 in-door and 809,336 out-door in the previous year. England is the only country which by its laws insures under defined conditions, the whole population against death by starvation.

Marriages.

The persons married during the year 1869 were 353,940, an excess of 16 over those in the previous year, but less by 4368 than in 1867, and 21,608 below the number in 1866. As the fluctuations in the marriages express pretty accurately the varied condition and prospects of the people, it may be inferred from these numbers that the effects of the commercial depression of the country which began in 1866–7 had not been dispelled.

The average minimum rate of discount charged by the Bank of England was slightly over 2 per cent. in 1868, rose to nearly 3¼ in 1869, exhibiting, as economists inform us, a more healthy condition of trade.

The average price of wheat was 48*s.* 2*d.* per quarter against 63*s.* 9*d.* per quarter in 1868. An increased number of marriages may be expected as the necessaries of life become cheaper.

Mean Annual Rate per 1000 in each quarter - -					6·89	8·39	7·92	9·77

* These rates may be read thus without reference to the decimal points :—In the March quarter of 1838, to 100,000 persons living, there were 618 marriages registered. A correction has been made for the varying numbers of days in the different quarters, see note to Table 18.

Of the 176,970 marriages, the numbers celebrated according to the rites of the Established Church were 135,082, or 76 per cent. The numbers performed not according to the rites of the Establishment were 41,888, or 24 per cent. The proportion in 1868 was 77 and 23 per cent. respectively. Of 100 couples who married in 1869 according to the rites of the Church ·01 were married by special licence, 13 by licence, 82 after banns, and 3 by Superintendent Registrar's certificate, while in 2 per cent. it was omitted to be stated under which of the foregoing heads the marriages should be classed. Of 100 couples who married not according to the rites of the Church of England 17 were Roman Catholics, ·1 were Quakers, 42 were members of various other Christian denominations, ·8 were Jews, and 40 were married without religious ceremony at the Superintendent Registrars' offices.

The marriages of Quakers declined from 73 in 1868 to 50 in 1869. The marriages of Jews on the contrary increasedfrom 306 to 336 in the two years.

Of the 176,970 marriages celebrated in 1869, 144,516 were between bachelors and spinsters, 7724 between bachelors and widows, and 15,722 between widowers and spinsters; and 9008 between widowers and widows. These proportions nearly correspond with the proportions of the former year, except in the case of the marriages of bachelors and widows, which increased 2·7 per cent.

There were 45 marriages in the year 1869 in which one of the contracting parties is stated to have been previously divorced.* The registers of marriages show that 15 divorced men married spinsters, 5 divorced men married widows, 17 bachelors and 8 widowers married divorced women. Two divorced men married divorced women.

Buildings registered for Marriages.—The number of these buildings on the register at the end of the year 1869 was 6212; 1789 of these belonged to the Independents or Congregationalists; 1255 to the Baptists; 1593 to the various bodies of Wesleyan Methodists; 326 to the Calvinistic Methodists; 184 to the Presbyterians; 161 to the Unitarians; 668 to the Roman Catholics; the United Brethren or Moravians have 19 buildings registered for marriages; the New Jerusalem Church has 27, and the Catholic and Apostolic Church has 19. The number of places of meeting certified for public worship to the Registrar General and on the register on 31 December 1869, including the 6212 registered for marriages, was 17,590. The list comprises nearly 100 different religious titles but probably with far fewer distinctions of creed. Some of the communities are so small that they are each represented by only one place of worship.

Re-marriages.—The number of widowers and widows who married was 24,730 and 16,732 respectively; the mean age of the widowers who married in 1869 was 42·6, while the mean age of widows was 39·1.

Marriages of Minors.—12,775 men and 37,813 women married under 21 years of age, so that of 100 men who married 7·22 and of women who married 21·37 were minors. The marriages of minors continue to increase. The proportion of young women under age was 17·6 in a 100 for the ten years 1850–59, while it was 20·1 in 100 for the ten years 1860–69. The proportion of men under age also increased in the same years. The counties which supplied the greatest proportion of males who married under 21 years of age are Bedford 13·6, Leicester 12·4, Huntingdon 11·9, Nottingham 11·1, Staffordshire 11·1, Northampton 10·2; and of females under age were Durham 33·4, Stafford 30·3, West Riding of York 26·7, Monmouth 26·5, Cambridge 26·4, Leicester 26·3. As the total number of marriages in 1869 was only 8 in excess of the number

* The number of absolute decrees of divorce pronounced by Her Majesty's Court for Divorce and Matrimonial Causes, in the year 1869, was 159. (*Judicial Statistics*, 1869, Part II., p. xxxv.)

in 1868 the differences in the various particulars between those years may be seen at a glance.

Ages of persons married.—Of 176,970 marriages in the year 1869 the precise ages of both parties were specified in 121,681 instances. In every 100 marriages the ages of one or both of the parties were omitted to be recorded in 31 cases. This defect is to be regretted, but there is a considerable improvement on former years. It is very desirable that whenever practicable the officiating minister and Registrar should ascertain and record the exact age. It would greatly add in future years to the means of identification in pedigree and other inquiries.

There were three deplorable cases in which men aged 80 and under 85 were married to women of 21–25, 30–35, 35–40, and one case in which a man of fourscore years married a bride of the same mature age.

The mean age of persons who married in 1869, including those who re-married, was 28·0 years for the men, and 25·7 years for the women; excluding widowers and widows, the mean age was 25·8 years for the bachelors and 24·4 years for the spinsters.

Signature of Marriage Registers.—35,199 men and 48,758 women made marks in signing the marriage register in the year 1869. Of 100 men married 20, and of 100 women 28, did not sign their names. The returns continue to afford proofs of slow improvement in the elementary education of the people; in the year under review out of every 100 persons married 17·0 were able to write their names in excess of the number in 1841, 28 years previously. The improvement has been greater in women than in men. In 1841 in 100 marriages the proportion of men and women who signed by mark was 33 and 49 respectively, and in 1869 it was 20 and 28. The ability to write the name is to some extent a test of the state of elementary education, for while there are some who are able to sign their name and nothing more, there are others, who writing with difficulty, even in less embarrassing situations than when surrounded by the spectators of a marriage ceremony, are satisfied with making a mark.

In some parts of England and Wales scarcely more than one half of the women who married were able to sign their names. In South Wales the proportion per cent. was 53·6, Staffordshire 56·0, Monmouth 58·3, Lancashire 59·0, North Wales 60·2. Among men the per-centages who wrote their names were lowest in Staffordshire 64·6, Monmouth 64·7, Suffolk 68·7, Cambridge 68·9, Bedfordshire 70·0, South Wales 70·1, North Wales 71·2, Shropshire 71·3.

The Counties and extra-metropolitan parts of Counties in which the highest proportions of women who wrote their names are Surrey 88·7, Sussex 88·6, Rutland 87·5, Middlesex 87·1. Westmorland 85·5, Hants 85·4, Kent 83·9, Berks 83·0. In London the proportion was 85·0. Among men the per-centages were highest in Westmorland 90·2, Rutland 86·2, Northumberland 85·7, Middlesex 85·3, Surrey 85·1, North Riding of York 84·8, East Riding of York 84·5. In London the per-centage was as high as 91·0.

In the South Eastern and Eastern Counties the proportions of women who wrote their names exceeded that of men; the same rule obtained in nearly all the purely agricultural Counties.

Births.

773,381 children born alive were registered in 1869, less by 13,477 than the number recorded in the previous year.

This is the first year since 1860 in which there is a decrease of births. During the ten years ended 1869 the increase had averaged 8933 per annum. Marriages, which were as high as one in 113 of the population in 1865 and 1866, declined to one in 122 in 1868, and were one in 124 in 1869; hence one cause of the diminution in the number of births.

Sex.—Of the 773,381 children born alive 394,570 were boys, and 378,811 were girls. Thus to every 100 girls 104·2 boys were born.

The proportion ranged in the counties from 100·8 in Shropshire to 113·7 in Rutland. It is worthy of notice that Rutland, which stood highest in the Kingdom in the excess of male over female births in 1869, exhibited in 1868 the exact reverse, the proportion then being 94·3 males to 100 females. This fluctuation in small numbers is fully in accordance with theory.

Seasons.—Births are generally most numerous in the first quarter. They were unusually high in the first quarter of 1869, the numbers were 203,775, 188,618, 190,394, and 190,594 in each quarter respectively.

Children born out of wedlock.—The proportions of males to females born in and out of wedlock present some remarkable variations; thus in Middlesex (extra-metropolitan) only 100·3 males to 100 females were born in wedlock, while no less than 128·6 males to every 100 females were born out of wedlock.

In Shropshire the proportions born out of wedlock were reversed, for 88·1 males only were born to 100 females. The counties showing the greatest excess of illegitimate males to females are Surrey (extra-metropolitan), Northampton, Worcester, Rutland, Northumberland, Cumberland, Dorset, and Middlesex (extra-metropolitan), ranging from 115 to 128·6.

Norfolk, North Wales, Sussex, Hertford, Westmorland, the North Riding of Yorkshire, Hants, Essex, Gloucester, and Kent (extra-metropolitan), exhibit an excess of less than two per cent.

Shropshire, Hereford, Leicester, and Derby show, on the contrary, an extraordinary excess of illegitimate females, ranging from 12 to 6 per cent. over males.

TABLE 8.—**Births** in the **Years 1845–69** in **England**, distinguishing the **Legitimate** and **Illegitimate**, and the Proportion of **Males born** to every 100 **Females born.**

1860	684,048	640,355	43,693	104·7	104·8	102·9	6·4
1861	696,406	652,249	44,157	104·6	104·5	106·1	6·3
1862	712,684	667,462	45,222	104·1	104·1	103·4	6·3
1863	727,417	680,276	47,141	104·7	104·6	106·3	6·5
1864	740,275	692,827	47,448	104·2	104·2	104·4	6·4
1865	748,069	701,484	46,585	104·0	104·0	103·9	6·2
1866	753,870	708,369	45,501	104·3	104·3	104·8	6·0
1867	768,349	723,163	45,186	104·3	104·2	105·7	5·9
1868	786,858	740,520	46,338	103·6	103·5	104·7	5·9
1869	773,381	728,690	44,691	104·2	104·1	105·0	5·8

The causes of the disparity in the facts where the numbers are small may be accidental, but many of the variations depend upon causes which have yet to be explained.

The number of illegitimate children was 5·8 in every 100 births registered.

The true proportion is probably somewhat higher, as in many cases the mother endeavours to evade the registration of her child as illegitimate. The difficulty of concealment in rural districts renders the return of illegitimacy in some counties very complete. In Cumberland the average

Mean Annual Rate per 1,000 in each Quarter					35·41	35·08	32·47	32·20

* These rates may be read thus without reference to the decimal points:—In the March quarter of 1838, to 100,000 persons living there were 3,032 births registered. A correction has been made for the varying numbers of days in the different quarters, see note to Table 13.

TABLE **13.**—**Proportional** Number of **Births** in each **Quarter** to **1000 Births** in the **Average Quarter*** of each Year, **1838–69.**

1869	193,345	1000	1067	978	977	978

* The three months January, February, March, contain 90, in Leap Year 91 days; the three months April, May, June, 91 days; each of the two last quarters of the year 92 days. For this inequality a correction has been made in the calculations.

Deaths.

In the year 1869 the deaths registered in England were 494,828, showing a further increase of 14,206 upon the numbers returned in the two preceding years. After allowing for increase of population the rate of mortality was 23 per 1000 against 22 both in 1867 and 1868. In the 32 years 1838–69 the average annual rate was 22·4 per 1000; the lowest rates being 20·5 and 20·8 in 1856 and 1850, and the highest 25·1 in 1849, the year of the severe cholera epidemic.

The deaths referred to zymotic diseases showed a considerable decrease upon those in 1868; the deaths from diarrhœa had declined nearly 10,000, thus more than counterbalancing the increase in the fatality from scarlet fever. The increase of deaths in the year appears to have been almost entirely due to the greater fatality from diseases of the respiratory organs, including phthisis, which caused 132,667 deaths in 1869 against 114,526 in 1868, or an increase of no less than 18,141. The causes of death in 1869 are considered in detail in Dr. Farr's letter in the Appendix, pp. 215–20.

The Seasons.—The meteorological characteristics of 1869 were not so marked as those of 1868. The temperature in the first quarter of the year, at the Royal Observatory, Greenwich, was 41°·3, or 2°·8 above the average for the same period of 98 years; in the second or spring quarter the mean was 52°·0, almost corresponding with the average; in the third 61°·4 and 1°·9 above the average, although 2°·5 lower than

Average of 32 years, 1838–69	23·36	21·48	104	109

The Table may be read thus:—In the year 1838 to every 1000 males *living* there were 23·42 deaths of males; to every 1000 females living there were 21·46 deaths of females; and to every 100 females who died there were 105 deaths of males. The last column shows the *relative* mortality of *males* and *females;* and that out of equal *numbers living* the deaths of males were 109 to every 100 deaths of females in 1838.

in the same period of 1868 ; in the fourth quarter it was 43°·o, and but slightly below the average. The rain-fall of the year was 24·o inches, and ·4 of an inch below the average in 54 years ; of this 6·6 inches fell in the March quarter, showing an excess of 1·6 inches ; in the last three quarters of the year the quantity measured was 5·5, 4·9, and 7·o inches respectively, each showing a deficiency which was largest in the summer months.

	XI.—MONMOUTHSHIRE AND WALES.												
42	Monmouthshire	24·12	20·26	21·00	21·06	21·25	25·56	23·97	22·57	21·34	20·84	22·29	21·05
43	South Wales	22·89	21·16	20·52	19·97	20·50	23·10	23·89	22·43	19·78	18·89	21·31	19·65
44	North Wales	20·47	22·25	20·98	21·89	21·71	22·14	22·07	23·65	22·02	21·02	21·82	21·84

In the four quarters of the year the annual rate of mortality was respectively 24·8, 21·8, 20·8, and 23·2 per 1000 of the estimated population; in the first three quarters of the year the mortality differed but slightly from the mean rate in the corresponding quarters of the years 1838–69. The excess in the last quarter was due to the fatality from diseases of the respiratory organs. Of 4000 deaths in 1869, 1090 were recorded in the first, 964 in the second, 919 in the third, and 1027 in the fourth quarters respectively.

Sex.—Of the 494,828 deaths registered in 1869, 254,863, or 51·5 per cent., were of males, and 239,965, or 48·5 per cent. of females. The deaths of males were to the deaths of females as 106 to 100.

From various causes the females considerably exceed the males in the English population, but of equal numbers living 114 deaths of males in 1869 were registered to every 100 deaths of females. In the 32 years 1838–69 this proportion averaged 109, and since 1849 has steadily increased from 105 to the 114 shown in 1869. The mortality among males in England always exceeds that of females; in the 30 years 1838–67 the

annual death-rate of males averaged 23·3 per 1000, while it did not exceed 21·5 among females. Except at the child-bearing ages the mortality among males exceeds that among females at each period of life, the largest excess occurring in male children under five years of age, who, in the 30 years above mentioned died at the rate of 72·4 per 1000 living at those ages, while among female children the rate did not exceed 62·5 per 1000. This excessive death-rate among male children is not so easy of explanation as the higher death-rates which also prevail among males at mature and old age, when they are exposed to the unhealthy and dangerous risks of workshops and manufactories, and of excessive bodily toil, inducing a variety of bodily ailments. Females are not exposed to these risks in anything like the same proportion as males, a certain proportion of women, however, die in childbirth.

Locality.—The mortality of England and Wales in 1869, as before stated, was at the rate of 22·6 per 1000 persons estimated to be living; in the ten years 1859–68 the rate had averaged 22·5. The uncertainty attaching to the estimates of population in counties affects their rates, which are, therefore, only given as provisional. Taking them as they stand, in the several

counties of England during 1869 the lowest rates were 17·8 in Westmorland, 17·9 in Rutland, 18·2 in Surrey (*extra-metropolitan*), and 18·4 in Dorset; the highest rates were 24·0 in Leicester, 24·6 in the London division, 24·7 in the East Riding of York, 26·3 in Lancashire, and 26·7 in the West Riding of York. Compared with the average rate in the ten previous years the death-rate in 1869 was considerably below the average in Staffordshire and Northamptonshire, while the largest excess was shown in Berkshire and Yorkshire. It will be seen that the mortality in different parts of England is to a great extent governed by the proportions of large town populations which they contain; and with the increase of those proportions in Lancashire and Yorkshire in recent years the death-rates have steadily increased. The dwellers in large towns not only suffer from the effects of over-crowding in dwellings, and other sanitary shortcomings, but are likewise exposed to greater risk from the various forms of mechanical and other injuries which result in what are classified as "violent deaths," than are those living in the smaller towns and in rural districts.

Towns.—The relative mortality prevailing in towns can only be satisfactorily calculated when the number of the population may be fixed with approximate accuracy. Estimates of population to the middle of 1869, especially in the larger towns, are in so many instances open to suspicion, that it is well to postpone consideration of the death-rates calculated thereon until the revised numbers obtained at the recent Census (1871) are available. It will be safe, however, to observe a few of the results from a comparison of the facts. The deaths in the 11 largest English towns, including London, showed a slight increase upon those in 1868. This increase was largest in Bristol, Salford, and London, while the numbers in Birmingham, Manchester, and Leeds had considerably declined; the sanitary condition of the last two boroughs showed especial improvement.

* For mode of reading this Table, see Note to Table 19.

NOTE.—The Population used in the above calculations is deduced from the ascertained rate of increase observed in the 20 Years 1841–61.

Mortality at different ages.—It is advisable to postpone any detailed consideration of the mortality at the different groups of ages until the results of the 1871 Census furnish the means of ascertaining the proportions of the population living at the several groups of ages. The unusually high temperature during the summer of 1868 caused an exceptional mortality among children from diarrhœa. In 1869, although the deaths at all ages showed an increase upon 1868 of 14,206, the deaths of infants under one were 120,274, and 1801 less than in 1868. Of children under five years of age 203,562 deaths were registered in 1869, or 41·1 per cent. of the total deaths; in the two preceding years the proportion was 40·0 and 42·3 per cent. respectively. The deaths of children over five years showed an

The Table may be read thus:—Of 1000 males living at the ages 35 and under 45, 13·58 died in 1838, 12·65 in 1839, and 11·62 in 1850; the average annual rate in the 30 years, 1838–67, among the aggregate of males in this decennial period of age was 13·03.

† The ages of the people have not been ascertained since the Census in 1861. There are no means, therefore, of determining, with any degree of accuracy, the relation which the deaths now bear to the population at the several ages in the above Table. Under these circumstances it has been considered expedient to discontinue publishing the rates of mortality at the different ages, until the results of the enumeration in 1871 are ascertained. The rates of mortality at each age for the years 1868 and 1869 are therefore omitted in Tables 19 and 21. The *deaths registered* at the several ages are, however, given in Tables 16 and 17.

excess in 1869 partly owing to the fatal prevalence of scarlet fever; while between 15 and 55 the deaths showed a somewhat lower proportion than in 1868. The principal excess of deaths in 1869 occurred among elderly persons; at the ages 55 and upwards 135,229 deaths were registered, or 27·3 per cent. of the total deaths, while in 1868 the number did not exceed 125,522, and the proportion was 26·1 per cent.

The proportions of deaths occurring at the different groups of ages varies very considerably in the two sexes. Of the 254,863 deaths of males registered in 1869, 109,012, or 42·8 per cent. were of children under five years of age; these included 66,691 or 26·2 per cent. of infants under one year of age. The deaths of females in 1869 under five years of age were 94,550 out of the 239,965 deaths at all ages; the proportion of female children under five was therefore 39·4 per cent.; of these 22·3 per cent. or 53,583 deaths were of infants under one year of age. The proportion of deaths of young male children, therefore, considerably exceeded that of females, especially under one year of age. Of male children between 5 and 15 years of age 16,020 deaths were registered in 1869, or 6·3 per cent. of the total male deaths; the deaths of female children at those ages were 15,324 or 6·4 per cent. Between 15 and 55 the male deaths also exceeded those of females, although from 15 to 35, including the principal child-bearing ages, the deaths of females somewhat exceeded those of males. The deaths of males from 15 to 55 in 1869 were 63,389 or 24·9 per cent. of the deaths at all ages; those of females were 61,304 or 25·5 per cent. The males, aged 55 years and upwards, who died in 1869 were 66,442 or 26·1 per cent.; the females 68,787 or 28·7 per cent. of the deaths of females at all ages. The greater longevity among females is especially shown at the extreme ages; at 95 years and upwards only 166 deaths of males were registered in 1869, while the females at those ages were 402. Aged 100 and upwards the deaths of 26 males and 53 females, in all 79 persons, were reported in 1869 against 63 in 1868. The highest ages said to have been attained in 1869 were 106 by a male, and 107 by a female.

* See Note to Table 19.

Deaths in Public Institutions.—During the year 1869 there were 41,263 deaths recorded in 1002 of the largest public institutions of England and Wales. Of these institutions, 689 were workhouses, 241 were hospitals and infirmaries, and 72 were lunatic asylums. Of each hundred deaths registered in England and Wales during 1869, 8·3 occurred in large Public Institutions, of which 5·6 were recorded in workhouses, 2·0 in hospitals, and ·7 per cent. in public lunatic asylums. The proportion of deaths in Public Institutions varied very considerably in the different registration Divisions; in the London Division 15·8 per cent. of the total deaths were returned in the larger public institutions; in the South-eastern Counties, Surrey (extra metropolitan), Kent (extra metropolitan, Sussex, Hampshire, and Berkshire, the proportion was 9·6 per cent. and in the North-western counties, Lancashire and Cheshire, it was 8·5. The smallest proportions were 5·1 per cent. in the Northern, 5·0 in the North Midland, and 3·8 in the Welsh registration divisions. The proportion of deaths recorded in workhouses throws some light upon the varying extent of pauperism in different parts of England and Wales. As stated above 5·6 per cent. of the deaths registered in England and Wales during 1869 occurred in workhouses. In London the per-centage

1869 –	133,096	118,947	114,644	128,141	24·78	21·84	20·77	23·16
Mean Annual Rate per 1000 in each Quarter –					25·02	22·18	20·62	21·85

* These rates may be read thus, without reference to the decimal points:—In the March quarter of the year 1838, to 100,000 of the population there were 2,615 deaths registered. The three months January, February, March, contain 90, in Leap year 91 days; the three months April, May, June, 91 days; each of the two last quarters of the year 92 days. For this inequality a correction has been made in the calculations.

TABLE 23.—**Proportional Number** of **Deaths** in each **Quarter** to **1000 Deaths** in the **Average Quarter*** of each Year, **1838–69.**

YEARS.	NUMBER OF DEATHS IN THE AVERAGE QUARTER.	PROPORTIONAL NUMBER OF DEATHS				
		In the AVERAGE QUARTER (assumed to be 1000).	FIRST QUARTER ending March 31.	SECOND QUARTER ending June 30.	THIRD QUARTER ending Sept. 30.	FOURTH QUARTER ending Dec. 31.
1838	85,690	1000	1145	1061	850	944
1839	84,746	1000	1059	1038	900	1003

1856	97,627	1000	1061	1031	928	980
1857	104,354	1000	1050	955	950	1045
1858	112,414	1000	1134	955	865	1046
1859	110,195	1000	1118	961	938	983
1860	105,680	1000	1166	1054	812	968
1861	108,778	1000	1129	990	923	958
1862	109,142	1000	1133	986	839	1042
1863	118,460	1000	1095	999	942	964
1864	123,883	1000	1159	949	901	991
1865	122,727	1000	1159	946	916	979
1866	125,172	1000	1118	1029	924	929
1867	117,768	1000	1152	956	914	978
1868	120,156	1000	1001	921	1081	997
1869	123,767	1000	1090	964	919	1027

* The three months January, February, March, contain 90, in Leap year 91 days; the three months April, May, June, 91 days; each of the two last quarters of the year 92 days. For this inequality a correction has been made in the calculations.

was 9·1, in Lancashire and Cheshire 6·9, in the South Eastern Counties 6·8, and in the Eastern Counties 6·0; the smallest proportions were 3·7 in Yorkshire, 3·6 in the North Midland Counties, 3·5 in the Northern Counties, and 2·9 per cent. in Wales. In a considerable number of the Welsh Unions there are no workhouses, only out-door relief being given; this in a great measure accounts for the small proportion of deaths being recorded in the workhouses of the principality.

Further details relating to the marriages, births, and deaths in 1869, with remarks upon the sanitary condition of districts, and other matters, will be found in the Quarterly Reports which were published within a month after the expiration of each of the quarters of the year. (See pp. xxxix–lvi.).

The United Kingdom.

The population of the United Kingdom at the middle of the year 1869 was estimated at 30,611,305. After correction for defective registration in Ireland, by authority of the Registrar General of that portion of the Kingdom, the persons married in the year were 487,682, the births were 1,082,537, and the deaths 695,902. The natural increase to the population of the Kingdom during the year, by excess of births over deaths, was 386,635. After deducting 190,716 emigrants of home origin, this number is reduced to 195,919, while in 1868 it was 288,221.

The marriage-rate for the United Kingdom in 1869 was 15·9, the birth-rate was 35·4, and the death-rate 22·7 per 1000 of the estimated population.

Table 24.—Estimated Population, Marriages, Births, and Deaths in the United Kingdom, in the Year 1869.

	Area in Statute Acres.	Area in Hectares.	Estimated Population in the middle of the Year 1869.	Marriages.	Persons Married.	Births.	Deaths.
United Kingdom	77,286,901	31,275,782	30,611,305	243,841	487,682	1,082,537	695,902
Great Britain	56,964,260	23,051,796	25,075,088	199,053	398,106	886,776	570,617
England and Wales	37,324,883	15,104,307	21,869,607	176,970	353,940	773,381	494,828
Scotland	19,639,377	7,947,489	3,205,481	22,083	44,166	113,395	75,789
Ireland	20,322,641	8,223,986	5,536,217	? 44,799	? 89,598	? 195,779	? 125,264

Note.—The *registered* Marriages, Births, and Deaths for Ireland were 27,277, 145,659, and 89,573 respectively. By the authority of the Registrar General of Ireland these numbers have been corrected in the above table for defective registration. It has been assumed that the marriages, births, and deaths in Ireland in the year 1869 were in the same proportion to population as the marriages, births, and deaths in England.

Table 25.—Proportion per 1000 of Marriages, Births, and Deaths to the Population of the United Kingdom, in the Year 1869.

	Acres to a Person.	Hectares to a Person.	To 1000 Persons Living.			
			Marriages.	Persons Married.	Births.	Deaths.
United Kingdom	2·52	1·022	7·97	15·94	35·36	22·73
Great Britain	2·27	·919	7·94	15·88	35·36	22·76
England and Wales	1·71	·691	8·09	16·18	35·36	22·63
Scotland	6·13	2·479	6·89	13·78	35·38	23·64
Ireland	3·67	1·485	? 8·09	? 16·18	? 35·36	? 22·63

Note.—The total area of a country, divided by its population, gives the average area to each person. The reciprocal gives the "density" of the population, or the population to each acre, square mile, or other measure.

The marriage-rate in Scotland was only 13·8 per 1000, against 16·2 in England and Wales. The birth-rates in these two divisions of the country were, however, almost identical, 35·36 in England and Wales, and 35·38 in Scotland. The death-rate per 1000 in 1869 was 23·6 in Scotland, or one per 1000 higher than in England and Wales.

In estimating the numbers of marriages, births, and deaths registered in Ireland, it has been assumed that the respective rates were the same as prevailed in England and Wales.

Note.—The above numbers have been compiled from returns furnished to the Registrar General by Lieutenant-Colonel J. F. Murray, Government Secretary of Jersey, Colonel W. Bell, Government Secretary of Guernsey, &c., and by Mr. S. Harris, Registrar General of the Isle of Man. The returns for Guernsey and adjacent islands are imperfect owing to certain denominations neglecting to register the births and deaths.

* The estimated decrease in the population of Guernsey and adjacent islands between 1869 and 1870 was confined to Alderney, and arose from the partial cessation of the government works in that island.

Foreign States.

In consequence of the disturbed state of France from external and internal wars the usual returns have not been received showing the marriages, births, and deaths returned in 1869 among the population of that country, which was estimated to the middle of that year at 38,481,444.

In the Austrian empire the marriage-rate during 1869—that is, the rate of persons married—was 20·74 per 1000 of the population; this considerably exceeded the rate in recent years, and was 4·56 per 1000 higher than the rate in England and Wales for the same year. The birth and death rates also showed a considerable excess, and were 41·99 and 29·58 respectively in Austria during 1869 against 35·36 and 22·63 in England and Wales during the same year.

Italy with an estimated population of 25,766,217 shows a marriage-rate for 1869 of 15·94; the birth-rate was 36·95, and the death-rate 27·70 per 1000 of the population.

No returns have been received from Spain relating to the marriages, births, or deaths in that country during 1868 or 1869.

Table **27.—Estimated Population of England, France,** and of **Austria,** in the middle of the Years **1853** to **1869.**

Years.	England and Wales.	France.*	Austria.‡

1868	21,649,377	38,342,818†	21,185,021‡
1869	21,869,607	38,481,444	21,412,564

* M. LEGOYT, late director of the Statistical Department of France, favoured the Registrar General with the returns of France for the years 1853–61 and for the year 1866. The population in the four years 1862–65, and in the years 1867–69 has been estimated by means of the average annual rate observed between the two enumerations of 1861 and 1866.

† Including the three last annexed departments, viz., Savoie, Savoie (Haute), and Alpes-Maritimes.

‡ The Registrar-General has, from time to time, been indebted to the Chief of the Statistical Department of Austria for the figures relating to that empire. The population returned above includes Hungary, Croatia, Slavonia, and Transylvania from 1853 to 1862 inclusive. From 1863–68 inclusive the population of Hungary, Croatia, Slavonia, and Transylvania is excluded. From 1853 to 1864 the States of Italy are included; from 1865 to 1869 they are excluded. Baron Hohenbühel, in furnishing to the Registrar-General the figures for 1869, states that they are derived from the Census enumeration carried out on the last day of December in that year, showing that the population of Hungary, and its annexed territories, was 14,326,364, thus giving 35,738,928 as the inhabitants of the entire empire.

TABLE **28.—Number** and **Proportion** of **Marriages, Births,** and **Deaths** in **England, France,** and in **Austria,** per 1000 of the **Population, 1853–69.**

(The returns relating to France were supplied by M. LEGOYT, late Director of the Statistical Department of France. Those relating to Austria have been supplied by the Chief of the Statistical Department of Austria, from time to time.)

* The returns for France in the years 1861 to 1866 include the three newly annexed departments. The deaths of Frenchmen abroad—civil or military—are registered in the books of the commune in which was their last domicile. M. Legoyt revised the population and the numbers of marriages, births, and deaths for the years 1853–65.

† The returns for Austria include Hungary, Croatia, Slavonia, and Transylvania from 1853 to 1862 inclusive. From 1863–68 inclusive the returns are exclusive of Hungary, Croatia, Slavonia, and Transylvania. From 1853 to 1864 the States of Italy are included; from 1865 to 1869 they are excluded. For the years 1860–62 the numbers for Hungary and its annexed territories were estimated. Baron Hohenbühel, Chief of the Statistical Department of Austria, expresses a hope that the Hungarians will no longer neglect the statistics of Marriages, Births, and Deaths in their portion of the empire.

‡ In France in 1865 and 1866 cholera was prevalent.—(*M. Legoyt.*)

§ Dr. Ficker attributed the excessive mortality in the year 1866 to cholera and war.

TABLE **29.—Italy** (inclusive of VENETIA). **Population, Numbers,** and **Proportions** per 1000 of **Marriages, Births,** and **Deaths,** in each of the Years **1863** to **1869.**

(Supplied by Dr. MAESTRI, Chief of the Statistical Department of Italy.)

1867	25,404,723	170,456	340,912	927,396	866,365	6·72	13·44	36·51	34·12
1868	25,527,915	182,743	365,486	900,416	777,223	7·16	14·32	35·27	30·45
1869	25,766,217	205,287	410,574	952,134	713,332	7·97	15·94	36·95	27·70

* The decrease of marriages in 1866 may be attributed to the law which then came into operation removing the civil registration from the parochial authorities to the communes; there had been a marked increase in the previous year resulting from a wish to evade the law about to come into operation. Doubtless many of the marriages solemnized in the churches during 1866 escaped registration.

TABLE **30.—Spain. Population, Numbers** and **Proportions** per 1000, of **Births** and **Deaths** in each of the Years **1861** to **1869.**

(Supplied by His Excellency JOSÉ EMILIO DE SANTOS, Vice-President of the Junta General de Estadistica, Madrid.)

The British Army.

During the year 1869 the average strength of the British Army at home and abroad, as shown by the returns with which I have been favoured by His Royal Highness the General Commanding in Chief, was 186,668.

At home the average strength was 86,278 officers and men; and the deaths from all causes were 903, of which 28 occurred among officers, and 875 among non-commissioned officers and men. The ratio of deaths per 1000 of the mean strength at home was 5·91 in the former, and 10·73 in the latter.

In Great Britain the death-rate of officers was 5·83, and of non-commissioned officers and men 11·62 per 1000, of the mean strength. In Ireland the respective rates were 6·18 and 8·06 per 1000. Compared with the results for the previous year the ratios showed a great reduction in the mortality of all ranks at home, the only increase being among officers stationed in Ireland.

The average strength of the army abroad in 1869 was 100,390; the deaths were 2347, viz., 65 officers and 2282 non-commissioned officers and men, yielding a death-rate per 1000 of the mean strength of 11·88 in the former, and 24·04 in the latter.

Compared with the results for 1868 there is a decrease in the mortality of officers, and a large increase in that of non-commissioned officers and men, of the British army abroad.

1869	600,072	3,533	5·89

Births and Deaths of British Subjects at Sea.

The strength of the mercantile marine decreased from 197,502 in 1868 to 195,490 in 1869. The number of deaths reported to the Registrar General of Seamen during the year was 4832 or 24·7 per 1000 of the strength. A statement of the deaths from different causes, compiled from a return furnished by the Registrar General of Seamen, is given at page lxvi., the following causes accounting for five-sixths of the 4832 deaths:—Drowned by wreck 1770, drowned by accident other than wreck 1069, other accidental deaths not by drowning 277, fever 291, consumption 165, yellow fever 162, dysentery 157, and cholera 137; the deaths from scurvy, which were 52 in 1867 and 26 in 1868, fell to 9 in 1869. There were 21 deaths

---

Table 40.—Number of Births and Deaths of British* Subjects at Sea, exclusive of Soldiers, Marines, invalided Seamen from the Royal Navy, and Seamen on Ships' Articles, in the Years **1856-1869**, reported by the Captains or Commanding Officers of Vessels to the Registrar General of Seamen at the Termination of their respective Voyages in Ports of the United Kingdom.— (Furnished to the Registrar General by the Registrar General of Seamen.)

* British *subjects* are not particularly described in these returns, but foreign names have been excluded. A column headed *Place of Birth* was formerly contained in these returns, for the purpose of distinguishing passengers as British subjects or Foreigners, but in many cases it was not filled up by masters, in consequence of their inability to obtain the information after the death had taken place. British and Foreign *seamen* are distinguished.

† The deaths of soldiers, marines, and seamen from the Royal Navy, who were passengers in British Merchant Ships, were 33 in 1856, 59 in 1857, 156 in 1858, 196 in 1859, 196 in 1860, 69 in 1861, 122 in 1862, 116 in 1863, 96 in 1864, 140 in 1865, 184 in 1866, 97 in 1867, 81 in 1868, and 51 in 1869. The number is 1,593 in fourteen years, which, if added to the 7,699 above, makes 9,295, the total number of deaths of *British subjects* at sea in 1856-69, exclusive of those of merchant seamen.

from murder and manslaughter and 15 from suicide. Of the total deaths 941 occurred at ages under 21 years, 2752 at ages 21 and under 41, 432 at ages 41 and upwards, and 707 at unknown ages.

The number of births and deaths among British subjects at sea reported to the Registrar General of Seamen in 1869, exclusive of seamen, soldiers, and marines, amounted to 258 and 502 respectively.

Marine Register Book.

By the Registration Act and the Passengers Act captains or commanding officers of British vessels are required to transmit to me the particulars of all births and deaths that occur at sea amongst English subjects. The entries for 1869 in the Marine Register Book which is kept by me are 89 births and 240 deaths, the returns, however, as appears from the numbers reported to the Registrar General of Seamen, are by no means complete.

Names on the Registers and Searches.

The names of all persons whose marriages, births, or deaths have been recorded in the registers during the 32½ years, from the middle of 1837 to the end of 1869, amounted on the 31st December in the latter year to 43,675,035, of which 1,622,149 were entered in 1869.

The means thus afforded of obtaining evidence of births, deaths, or marriages are each year used to a greater extent, as is shown (*see* Table 42) by the constant increase in the number of searches made at the Central Office. In 1869 the searches in the indexes prepared under the Registration Act were 13,326, and the certificates given 11,503; the searches for non-parochial registers were 929, and the certificates granted 724. The searches made in 1869 showed an increase of 1400 upon those in 1868. The total

In the 18 years 1852-69	3,244,925	68,531	21·1

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Seamen. Since 1867 the return *includes seamen dying ashore in foreign parts*, whose wages and effects are delivered to the consuls or officers of the hospitals on their discharge from their ships.

If a seaman dies on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel is not to return direct to the United Kingdom. But if a *passenger* dies on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given, and in the accompanying tables the births and deaths are classed according to the years in which they occurred. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occurs in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar General of Seamen.

amount received in fees for searches and certificates, and paid into the Exchequer, was 2031*l.* 11*s.* The numerous certificates of births furnished for purposes connected with the Factory Acts, being given free of charge, are not included in the above.

The return of the Chief Registrar of the Court of Probate shows that the number of probates and letters of administration granted at the principal registry in the year 1869 was 14,674. The value of the effects was sworn under 60,869,055*l.* The returns furnished by the district registrars show that the number of probates and letters of administration granted in the 40 district registries in the same year was 23,388. The value of the property under which these probates and administrations were sworn was 40,025,714*l.* At the principal Registry and the district Registries the total number of probates in 1869 was therefore 38,062, and the value of the effects was sworn under 100,894,769*l.*; in 1868 these figures were 36,292 probates, and the value 94,040,261*l.*

A report on the Causes of Death in England in 1869, addressed to me by Dr. Farr, will be found in the Appendix, pp. 215–20, and accompanying the usual abstracts are detailed tables of considerable interest relating to the violent deaths, and to the deaths registered in the large public institutions during the year 1869.

I have the honour to be,
Sir,
Your faithful servant,
GEORGE GRAHAM,
Registrar-General.

NOTE.—The numbers registered in 1837 are for the Half Year ending December 31*st*.

Summary of the Quarterly Reports, 1869.

First Quarter.—January, February, March.

In the United Kingdom the births of 270,799 children, and the deaths of 179,814 persons of both sexes, were registered in the three months ending on March 31st. The recorded natural increase was 90,985; the native emigrants were 23,612.

The number of persons married in the quarter ending March 31st, 1869, was 106,448.

The death-rate of the Kingdom differs little from that prevailing in England and Wales.

The resident population of the Kingdom in the middle of 1869 is estimated at 30,621,431; that of England and Wales amounting to 21,869,607, of Scotland to 3,205,481, and of Ireland to 5,546,343. The corrected death-rate of the quarter is 24·9 per 1000; the birth-rate 37·7; the marriage-rate 16·4.

The several facts concerning Scotland and Ireland are recorded in the quarterly reports of the Registrars General of those parts of the kingdom.

England.—After a season of depression, which extended over a period of two years, the marriage-rate rallied in the first quarter of the year 1869. The births, allowing for increase of population, were numerous beyond example. The mortality was slightly below the average of the season, but as many places continued to suffer from an epidemic of scarlet fever the quarter cannot be classed as healthy. The death-rate exhibited an increase over the winter quarter of 1868, when the mortality was exceptionally low.

Marriages.—The marriages in the three winter months of January, February, and March, are always less numerous than in any other season of the year, but 75,504 persons married in that quarter of the year 1869, or 2112 more than were married in the same period of 1868. This improvement implies that the people began to think more favourably of their prospects. There was an increase in the number of marriages in each of the eleven great divisions of England, except in the South-western Counties, the North Midland Counties, and the North Western Counties, which exhibited a slight decrease as compared with the number in the corresponding quarter of last year. Marriages in Kent and Lincolnshire were depressed. A remarkable decline was observed in Saffron Walden, Yarmouth, Totnes, Bodmin, Stone, Basford, Bakewell, Liverpool, and Ecclesall Bierlow. The people married at the rate of 14·0 in 1000 of the population, whilst the average of the corresponding quarter of the last 10 years was 14·1. The proportional numbers in the same period in 1867 and 1868, respectively, were 13·8 and 13·6.

Births.—The number of births registered in the first three months of 1869 was 203,775, being 5191 in excess of the number registered in the winter quarter of the year 1868. In London there was a slight decrease, the births having declined from 29,857 to 29,293 in the winter quarters of 1868–9. In all the other great divisions there was an increase in the absolute numbers. Passing on to counties it appears there was a decrease in Sussex, Bedford, Rutland, Lincoln, and Westmorland. The deficiences, however, were small, excepting in the case of Bedford, where it may be the consequence of the removal of families dependent on the straw plait manufacture. The annual birth-rate of England in the quarter was 38·0

per 1000 of population, against an average of 36·9. Arranging the fourteen large towns of the United Kingdom according to their respective birth-rates the following is their order of precedence: Leeds 42·8, Newcastle-on-Tyne 41·5, Glasgow 41·5, Sheffield 41·1, Salford, 39·5, Edinburgh 39·2, Bristol 38·8, Liverpool 38·7, Birmingham 38·4, Manchester 38·2, Bradford 37·9, London 37·5, Hull 33·7, and Dublin 28·7.

Increase of Population.—As the births in the first quarter of the year amounted to 203,775, and the deaths to 133,096, the natural increase of population in England and Wales in the 90 days was 70,679. This addition, however, to the population of the country was reduced by emigration.

The number of emigrants from ports in the United Kingdom was 30,275, of whom about 11,110 were English by origin, 2702 were Scotch, 9800 were Irish, and 6663 were foreigners. Of the total number 26,900 chose the United States for their destination, 2713 the Australian Colonies. Of the 9800 Irish emigrants, 8964 went to the United States. The number of Irish who emigrated during the quarter was 2332 less than in the winter of 1868; in the total number of emigrants in the quarter there was an increase of about 4289, which is accounted for by the excess in the English, Scotch, and foreign emigrants.

Prices, Pauperism, and the Weather.—The price of wheat, thanks to a bountiful harvest, fell from 72*s.* 2*d.* per quarter in the first three months of 1868 to 50*s.* 2*d.* in the first three months of the year 1869, representing a marked decrease of 30 per cent. Potatoes were also 29 per cent. lower in price than in the winter of 1868. The mean price per ton for the best quality at the waterside market in Southwark in each of the three winter quarters of 1867–9 was 137*s.* 6*d.*, 147*s.* 6*d.*, and 105*s.* respectively. Beef as sold by the carcase at Smithfield market ranged from 4¾*d.* per lb. for inferior quality to 7¼*d.* for superior quality. Mutton was from 4¾*d.* per lb. for inferior quality to 7½*d.* for superior quality. Both beef and mutton were dearer than in the winter quarter of 1868.

The pauperism returns for the quarter showed an increase of in-door paupers and a decrease of out-door paupers compared with the same period of 1868.

The months of January and February, with the exception of a short period extending from 19th to 25th of January, were remarkably warm. Up to March 1st the excess of temperature averaged more than 5¼° daily. On March 2d a change took place and a period of cold and wintry weather set in and continued until the end of the quarter. The average deficiency of temperature during this period exceeded 4° daily. The mean daily temperature of the quarter exceeded the average by more than 2°. At Greenwich the mean temperature of January was 41·1°, or 4·9° higher than the average of 98 years. The mean temperature of February was 45·3°, or 6·9° in excess of the average of 98 years; and it is necessary to go back to 1779 for a similar period of high temperature. The mild weather which prevailed in these two months was favourable to the grazier. By the end of February vegetation was remarkably forward, but the land was very moist, which impeded agricultural operations. The rainfall was 1·1 inch in excess of the average in January, and 0·7 inch in excess in February. Four-fifths of the rainfall of the quarter fell in the first two months. The mean temperature of March was 37·5°, or 6·5° colder than that of the same month in 1868, and 3·5° below the average of 98 years. During the greater part of this month there was an advantageous check on vegetation. Agricultural spring operations were generally in a backward state, and a great deal of ploughing and sowing remained to be done at the end of the quarter. The rainfall of the three months was 6·6 inches, or 1·6 inch in excess of the average. Six or seven inches were measured at Hull, Newcastle-on-Tyne, Edinburgh, and Leeds; amounts of from 7 to 10 inches at Sheffield, Birmingham, Dublin, Salford, and Bristol;

while at Glasgow the fall measured 11·19 inches. The highest mean temperatures for the quarter were recorded at Dublin 43·6°, Leeds 42·9°, Bristol 42·1°, and Liverpool 42·0°; the lowest at Newcastle-on-Tyne 38·7°, and Hull 39·1°; at Edinburgh and Glasgow the mean temperature was slightly below that of London, viz., 40·0° and 41·1°.

Deaths; and the State of the Public Health.—The number of deaths registered in the first quarter of the year 1869 was 133,096, against 119,676 in the winter quarter of 1868, the respective death-rates of the seasons being in the annual proportion of 24·8 and 22·3 per 1000 of population. The winter of 1868 was therefore a healthier season to the people of England than that of 1869. The fine weather which prevailed in the first quarter of the year 1868 had a remarkable influence on the mortality; fever and diseases incidental to childhood being much less fatal than usual. The winter of 1869—although the mean temperature was in excess of the average—was not so favourable to the public health, for, in addition to an epidemic of scarlet fever, trying and exceptional climatic conditions prevailed. The weather in the beginning of January—as previously described—was very warm, but suddenly turned cold for about a week, and swelled the number of deaths from bronchitis; then a warm period set in and lasted until the beginning of March, when there was another change to wintry and ungenial weather, which continued up to the end of the quarter, and cut off many of the very young, the weakly, and the aged. The winter of 1869 affords another example of the effect of vicissitude of temperature on the health of the people, and warns those who are very susceptible to such variations to endeavour, in their manner of life, to counteract in some measure the severity of the climatic changes experienced in an English winter. The period of life when the greatest susceptibility to a fatal attack of bronchitis exists is after 65; but at the age 45 and under 55 the increase is remarkable; as also is the high rate of mortality in infancy. The average annual death-rate from bronchitis in six recent years among males, was 4·42 per 1000 of population at the age under 5 years; at the ages 5 and under 45 the mortality was comparatively inconsiderable; at 45–55 it was 1·51 per 1000; at 55–65 it was 3·79; and continued to increase as age advanced, viz., 8·76 at 65–75; 16·14 at 75–85; 22·76 at 85–95; and 23·57 at the age of 95 and upwards.

If the prevalence or non-prevalence of zymotic elements in the metropolis may be taken as an indication that the same conditions exist over the whole of England, then the 648 deaths registered in London from scarlet fever during the first quarter of 1869—against 339 and 368 in the winter quarters of 1867–8—imply that the country was visited very severely by this epidemic in the winter of 1869. Whooping-cough and measles prevailed in many districts. The death-rate of the quarter under review was below the average of the season of the last ten years, and compares favourably with the rate observed in the three years 1864–6.

The annual death-rate of the quarter experienced by the people inhabiting the chief towns, where there were 37·9 persons to every ten acres was 26·55 per 1000 of population, against an average of 27·24, while the death-rate of persons residing in the small towns and country parishes, where the population to every ten acres only averaged 2·7, was 22·56 per 1000, against an average rate of 23·02. But where proper arrangements are adopted for adequate water supply and good drainage the evils which make dense districts so fatal can be mitigated.

As the mortality in the winter quarter is not so much influenced by the activity which a higher temperature gives to zymotic elements, perhaps the comparative salubrity of the fourteen large towns of the United Kingdom is not most strikingly shown by the annual death-rate of the quarter. Arranging them, however, in the order of their respective death-rates the

following is their position on the hygienic scale. Birmingham, with a population of 360,846, showed a death-rate of 20·7 in every 1000 persons; London, with 3,170,754, showed 25·4; Hull, with 126,682, showed 26·3; Bristol, with 169,423, showed 26·6; Bradford, with 138,522, showed 26·9; Leeds, with 253,110, showed 27·5; Salford, with 119,350, showed 27·8; Dublin, with 320,762, showed 29·1; Sheffield, with 239,752, showed 29·4; Liverpool, with 509,052, showed 29·6; Newcastle-on-Tyne, with 130,503, showed 30·4; Manchester, with 370,892, showed 31·0; Edinburgh, with 178,002, showed 33·0; and Glasgow, with 458,937, showed 40·1. Birmingham, in the West Midland Division, and London, enjoyed the greatest amount of health, and Edinburgh and Glasgow the least.

A comparison of the results for the eleven divisions of England shows that the south-eastern, where the mortality for the quarter was at the annual rate of 21·4 per 1000, was the healthiest. In Croydon scarlet fever caused 20 out of 321 deaths.

Mr. George Rigden, M.R.C.S., of Canterbury, to whose exertions that city is much indebted, reports upon its sanitary condition as follows:— During the year 1868 the prevalence among children of diarrhœa and abdominal diseases, which were general throughout the Kingdom in July, August, and September, raised the mortality above that of 1867. It was gratifying, however, to observe that although the deaths registered in each of the three years 1863–5 were as high as 515, 558, and 549, respectively, yet during the three years 1866–8 they were 497, 463, and 500, or less in the aggregate by 162 than in the three preceding years. This improvement may be justly regarded as the beneficial result of increased attention to sanitary arrangements, and cannot be attributed to mere chance. It should, however, be stated that the mortality of Canterbury has been considerably in excess of a healthy standard, and, with every advantage of unlimited water-supply, and great facilities for drainage, it will only be through lamentable neglect if a much lower rate of mortality is not ultimately attained.

The south-western and south-midland counties follow next in order of salubrity; their respective death-rates were 21·8 and 21·9.

The mortality of the eastern counties was 22·4; that of Monmouthshire and Wales, 23·1. At Holywell, the deaths exceeded the births by 30; scarlet fever was the cause of 33 deaths out of 125. This epidemic had raged in the sub-district for 15 months, but was now passing away; it had, however, been followed by measles. In the west-midland and north-midland counties the respective death-rates of the season were 23·6 and 24·4. The mortality was very high in Caistor, Mansfield, Basford, and Radford. In Basford the deaths rose from 394 to 605 in the respective winter quarters of 1868–9; in some parts of the district scarlet and typhoid fevers had been very prevalent. The northern counties show a mortality of 26·1. In the township of Cockfield in Teesdale 17 deaths occurred from typhus fever, which had prevailed to an alarming extent. The registrar stated that the bad sanitary condition of the place was sufficient cause of so serious an epidemic. At Barnard Castle, also in Teesdale, a fatal case of typhus occurred in the Union workhouse. The supposed cause of the disease was sewage matter in the wells that supplied the house with water for domestic use. There had been no further case since the pumps had been fastened up. Yorkshire showed the high death-rate of 28·1. In the sub-district of Brightside, in Sheffield, 30 deaths from small-pox were recorded; of these cases 21 were unvaccinated. In Sheffield, north sub-district, 19 fatal cases of small-pox were returned. The north-western counties also showed the high rate of mortality of 28·1. Rochdale experienced a high rate of mortality, scarlatina, typhus, and small-pox having prevailed. The registrar states that the authorities are actively exerting themselves in improving the sanitary arrangements, which it is hoped will have a beneficial effect on the health of the town.

Second Quarter.—April, May, June.

In the United Kingdom the births of 257,529 children, and the deaths of 162,534 persons of both sexes, were registered in the three months ending on June 30th. The recorded natural increase was 94,995.

The number of persons married in the quarter ending June 30th, 1869, was 108,726.

The death-rate of the Kingdom differs little from that prevailing in England and Wales.

The resident population of the Kingdom in the middle of 1869 is estimated at 30,621,431; that of England and Wales amounting to 21,869,607, of Scotland to 3,205,481, and of Ireland to 5,546,343. The corrected death-rate of the quarter is 22·1 per 1000; the birth-rate 34·8; the marriage-rate 14·9.

The several facts concerning Scotland and Ireland are recorded in the quarterly reports of the Registrars General of those parts of the Kingdom.

England.—The marriage-rate in the second quarter of the year 1869 was the lowest recorded in any corresponding season during the last quarter of a century. The birth-rate was also remarkably low; and the death-rate slightly below the average of the season.

Marriages.—86,404 persons married in the quarter that ended on 30th June. The marriage-rate was 15·8 or 1·4 below the quarterly average, thus the symptoms of increase in the marriage-rate which were noticed in the previous quarter subsided in the subsequent months, and the decrease would seem to indicate, that no steady improvement had at this period taken place in the means of the great bulk of the population of England. The Tables show that the decrease was spread over most of the counties and districts.

Births.—In the three months ending 30th June, the births registered were 188,618, against 202,839 in the same season of 1868. This decrease of 14,221 extended more or less over the whole country; the greatest proportional decrease was observed in the North Western Counties (Cheshire and Lancashire), where it reached 9 per cent. In the West Midland Counties the decrease was 8·4 per cent. In London it was 7·2 per cent. In the Eastern Counties it was 6 per cent., and it was 4·4 per cent. in the Northern Counties. In Canterbury the decrease was 34 per cent.; in Mansfield 31 per cent.; in Northleach it reached 38 per cent., and in Wolverhampton, Dudley, Stourbridge, Ashton-under-Lyne, Barnsley, and Ecclesall Bierlow, where the decline in the number of births was also remarkable, the local registrars reported that the decrease was owing to serious depression in the coal and iron trades. Many of the workmen were compelled to seek new fields of labour. The annual birth-rate of the quarter was 34·6 per 1000 of the population, against 37·6 in the same period of the previous year; the average of ten previous springs being 36·7. The birth-rate is the lowest on record since 1847, and only thrice in the last twenty-one years was there any approximation to it, viz., in 1848, 1853, and 1858; perhaps the chief cause of such an unusual feature in the returns may be sought in the depressed marriage-rate, which prevailed for eight consecutive quarters during the years 1867–68.

Increase of Population.—The excess of births over deaths in the quarter under review was 69,671. The natural increase of the population was, therefore, at the rate of 765 daily; which number, however, was considerably diminished by emigration.

Prices, Pauperism, and the Weather.—The price of wheat fell. The average price in the quarter ending 30th June was 45*s.* 7*d.* per quarter, which was less by 26*s.* 3*d.* than in the corresponding period of 1868; the reduction was 37 per cent. The average of the highest and lowest prices

of beef at Smithfield market was $6\frac{1}{8}d.$ per lb.; and of mutton $6\frac{3}{8}d.$ Both beef and mutton were $\frac{1}{2}d.$ per lb. dearer than in the spring quarter of 1868. Best potatoes were 95*s.* per ton, which was 37 per cent. cheaper than they were at the same time in the year 1868.

The pauperism returns for the quarter show an increase of in-door and out-door paupers compared with the same period of 1868.

The meteorological character of the spring of 1869 is recorded in detail by Mr. Glaisher; he shows that the cold period which set in on the 2d of March continued until the 5th of April. On the 6th there was a change, and the only warm period of any duration during the quarter set in, and extended to the 29th; the mean daily excess of temperature for these 24 days was $5\frac{1}{4}°$. From the 30th of April to 12th of May, there were alternations of cold and warm weather; but the cold predominated. On the 13th of May the weather turned colder, and so continued with trifling exceptions until the 1st of June, the cold being most intense towards the end of May. From May 13th to June 1st the mean temperature was 3·9° in defect daily. The period from the 2d to the 8th of June, with the exception of the 4th day, was warm; on the 7th it was excessively warm, but on the 10th of June a remarkable period of severe cold weather set in, which lasted to the end of the month, some days being marked by exceedingly low temperatures. The average temperature of the month of April was 4·3° in excess; only four instances of warmer Aprils are recorded; viz., in 1779, 1821, 1844, and 1865. The average temperature of the cold months of May and June was 52·9°, or 7° less than that of the same period in 1868. Since the year 1770 there were only ten instances of lower temperature in these two months.

The wintry character of the month of March, with a temperature of 37·5°, checked the progress of vegetation, but the genial weather of April, when the temperature rose to 50·3°, caused vegetation to progress very rapidly, so that by the end of the month the prospects of the harvest were very good. The cold weather of May and June, with mean temperatures of 50·5° and 55·3° respectively, was most unfavourable, and by the end of the quarter all cereal crops were backward, and great uncertainty prevailed as to the yield. Only the early kinds of corn were in ear and blossomed by the end of June, but this was confined to the Southern counties, so there was every probability that the harvest would be late.

Deaths; and the State of the Public Health.—During the quarter ending 30th June the health of the country was good; a mild April followed by a cold May and June did not act very unfavourably on the public health. The deaths were below the average of the season, and the improvement would no doubt have been greater if the preceding March had been more genial, for many bronchial affections which commenced then, terminated fatally in the quarter now under review. The total deaths numbered 118,947 and were at the annual rate of 21·8 per thousand of population against an average of 22·0. The deaths were 8,937 in excess of those registered in the same period of the previous year, but the death-rate then was exceptionally low. In most of the South-eastern, South-midland, Eastern, and South-western counties of England the epidemic of scarlatina almost subsided, but only to be followed by measles and whooping-cough, so the benefit arising from exemption from one epidemic was counterbalanced by the outbreak of others. In the West Midland, North Midland, North-western, and Northern counties, and in Yorkshire and Wales, scarlet fever continued to reign epidemically, and some places suffered from small-pox.

In London small-pox and measles declined, as compared with the corresponding period of 1868, while scarlet fever and whooping-cough increased, as did also the deaths by bronchitis and pneumonia. The deaths in London in each of the two quarters ending 30th June 1868

and 1869 respectively were as follows: small-pox 187 and 55, measles 741 and 315, scarlet fever 352 and 675, whooping-cough 780 and 1177, bronchitis 1366 and 1655, and pneumonia 878 and 1001.

The annual rate of mortality in the population of the country districts was at the rate of 20·6 per 1000, the average rate being 20·3, while in the chief towns, where the inhabitants are in closer proximity to each other, the mortality was at the rate of 22·8 against an average of 23·4,—the benefit of the low death-rate being confined to the denser districts. The general mortality, however, is to a considerable extent made up of the deaths of children, and in comparing the mortality of town and country, without distinction of age, it must be borne in mind that the method is favourable to the towns, where there is an excess of persons at the ages when the mortality is comparatively low.

The returns contain some examples of the efficacy of hygienic measures, but much remains to be done to complete the sanitary defences of the Kingdom. In London and 13 other large towns the annual death-rate of the quarter was 24 per 1000. In Glasgow the mortality per 1000 of population rose from 29·5 in the second quarter of 1868 to 36·4 in that of 1869; in Edinburgh from 23·8 to 33·0; in Liverpool from 25·8 to 27·3; in Hull from 19·4 to 24·0; in Newcastle-on-Tyne from 21·9 to 24·0; in Leeds from 21·3 to 22·4; and in London from 21·9 to 22·3. In the following large towns the mortality fell, viz., in Manchester from 27·7 to 25·0; in Bradford from 25·1 to 24·7; in Sheffield from 26·3 to 24·5; in Salford from 25·9 to 24·2; in Dublin from 22·9 to 22·7; in Bristol from 23·3 to 21·6; and in Birmingham from 20·7 to 18·3.

The high rate of mortality in Glasgow is partly due to epidemic and other diseases, to which children succumbed in undue proportions to the rest of the population. While protection against the diffusion of cholera poison by means of an impure water supply has been secured in this city, the importance of aiming at immunity from other generating elements of disease should not be lost sight of. Glasgow is supplied with an abundance of good water, but other sanitary defences have been practically overlooked. Dr. Gairdner reports that the true causes of the excessive liability of this city to high tides of disease and death are to be sought chiefly in the low standard of domestic comfort, in overcrowding, general squalor, and physical degradation, which are the unhappy characteristics of a large section of the population. The city of Manchester, which is also supplied with an abundance of pure water, shows a high rate of mortality, but it is considerably lower than the Scottish city. Why cannot the administrative abilities, which have been so successful in commanding a pure water supply, be as successfully applied, not only in the demolition of old tenements, but in the erection of new constructions and improved house accommodation for the poorer classes, and also in enforcing the law against overcrowding?

The mortality of London steadily increased from 20·2 and 21·9 to 22·3 per 1000 in the three spring quarters of 1867–68–69. The preservation of the health of this vast city depends greatly upon an uncontaminated water supply; but the Thames and the Lea do not yet flow unpolluted. Recent and frequent analyses have proved that organic matter in the form of nitrates generated from sewage and animal refuse is found in these waters; and when the towns from Oxford downwards have completed the works required by the Act to enable them to discontinue discharging their sewage into the Thames, even then a certain diluted form of liquid sewage, after it has been used for purposes of irrigation, will filter off the land into the river and so render the water unsafe for domestic use unless this contamination can be destroyed in its course.

In 57 seaside sub-districts containing the principal English watering places the annual death-rate during the quarter was 20 per 1000. On the north-east coast Whitby and Scarborough showed a mortality of 23 and 21

respectively. On the east coast Yarmouth showed 23, and Lowestoft 15. On the south-east coast Margate showed 23, Ramsgate 27, Dover 16. On the south coast Hastings and St. Leonards showed 15, Eastbourne 12, Brighton 19, Worthing and Littlehampton 20, Isle of Wight 19, Weymouth 19, Torquay 19. On the south-west coast Ilfracombe showed 18. In South Wales, Tenby showed 20. In North Wales, Bangor and Beaumaris showed 22, Llandudno 27. On the north-west coast New Brighton showed 12, Blackpool 26.

Of 9 inland watering places contained in 17 sub-districts Tunbridge Wells showed a mortality of 20, Bath 22, Cheltenham 19, Harrogate 23. As there are no means of ascertaining with any degree of accuracy the present population of the English watering places, and as they are resorted to in different proportions by the healthy portion of the community as well as by invalids, the results must be taken only as an approximation to the true rate of mortality.

The mortality in the South-eastern counties was at the rate of 19 per 1000 of population. Measles was epidemic in some districts. In the South Midland counties some parts of Cambridgeshire suffered from the same epidemic, and the mortality was at the rate of 19. In the Eastern counties, where the death-rate was 21, measles and whooping-cough prevailed; at St. Matthew, Ipswich, 11 deaths from small-pox were registered. The South-western counties were also visited by measles and whooping-cough; at Lyme, Axminster, there were 500 cases of measles, 18 of which proved fatal; some districts in Devon and Cornwall suffered severely from the epidemic; the mortality from all causes was at the rate of 21. Passing on to the West Midland counties, where the death-rate was 20, the prevailing epidemics were measles and scarlet fever; at Evesham, out of 68 deaths during the quarter, 21 were referred to scarlet fever. In the North Midland counties scarlet fever and measles were prevalent, the mortality was at the rate of 22; at Saltfleet, Louth, small-pox was imported from Hull, but no fatal cases had occurred. In the North-western counties the death-rate was 24 per 1000; typhus, scarlatina, measles, and small-pox were fatal in several town districts. The deaths in the Liverpool workhouse, in the Mount Pleasant sub-district of Liverpool, were above 100 more than in the same period of the two previous years, owing chiefly to an epidemic of measles among children of German emigrants temporarily located in this institution; there were also 101 deaths from typhus, nearly all of which occurred in the workhouse. At Atherton, in Leigh, out of 147 deaths in the quarter 77 occurred from an epidemic of measles of a most malignant kind. At Tonge, in Chadderton, complaint was made of children afflicted with small-pox running in the streets at the time the eruption was discharging from their faces. At Royton, in Oldham, where the drainage was imperfect, typhoid fever was prevalent. Yorkshire still exhibited a high death-rate, viz., 25 per 1000. Scarlet fever and small-pox were the prevailing epidemics. At Brightside, Sheffield, 10 fatal cases of small-pox occurred, vaccination having been much neglected; of the number of children born from September 1868 to the end of February 1869, the Registrar reported that up to the 30th June 1869 some 250 remained unvaccinated. At Brompton and Osmotherley, in Northallerton, scarlet fever was very prevalent; the Registrar was of opinion that the disease might have been arrested if precautionary measures had been adopted; he reported that in one of the townships of Northallerton where scarlet fever broke out in a virulent form, it was, owing to the adoption of sanitary measures, confined to the dwelling in which it began. The mortality in the Northern counties was at the rate of 23; scarlet fever was epidemic in some districts of Durham, and in a village a few miles from Cockermouth, typhoid fever caused 5 deaths, 3 of which occurred in one house; upon inquiry, a cesspool used by a butcher for the deposit of offal was discovered in a

very foul condition. In Wales the death-rate was 22. At Holywell the deaths exceeded the births, owing chiefly to measles following an epidemic of scarlet fever.

Third Quarter.—July, August, September.

In the United Kingdom the births of 252,061 children, and the deaths of 149,673 persons of both sexes, were registered in the three months ending on September 30th. The recorded natural increase was 102,388.

The number of persons married in the quarter ending September 30th, 1869, was 108,380.

The death-rate of the Kingdom differs little from that prevailing in England and Wales.

The resident population of the Kingdom in the middle of 1869 is estimated at 30,621,431; that of England and Wales amounting to 21,869,607, of Scotland to 3,205,481, and of Ireland to 5,546,343. The corrected death-rate of the quarter is 20·8 per 1000; the birth-rate 34·5; the marriage-rate 14·8.

The several facts concerning Scotland and Ireland are recorded in the quarterly reports of the Registrars General of those parts of the Kingdom.

England.—In the third quarter of the year the marriages were below and the births and deaths slightly above the average of the season.

Marriages.—87,956 persons were married in the quarter that ended on September 30th, 1869. The marriages were 43,978, against 43,509 in the preceding summer, and allowing for increase of population, the rate was slightly above that of the corresponding season of 1868. The marriage-rate was 15·9 per 1000, while the average of ten preceding quarters was 16·4; the circumstances, however, which operated to depress marriages in England did not prevent an increase in certain parts. In the South-western, West Midland, North-western, and Northern Divisions, and in Yorkshire, there was an increase. In Staffordshire, Warwickshire, and Durham there was a notable increase; in the district of Dudley the increase in the number of marriages was 28 per cent.

Births.—The births fluctuate less than the marriages, and in each of the three quarters ending 30th September 1867, 1868, and 1869, the numbers were 190,782, 192,583, and 190,394 respectively, or nearly the same. The Eastern division, and Monmouthshire and Wales, show the greatest proportional decrease. A considerable decline was also observed in the counties of Middlesex (*extra-metropolitan*), Northampton, Devon, Salop, Stafford, Lincoln, Northumberland, and Cumberland. The annual birth-rate of England in the three months under review was 34·5 per 1000 of population against an average of 34·0. A comparison of the birth-rates to every 1000 of population in certain large towns in each of the two quarters ending 30th September 1868 and 1869 respectively shows the following results:—Salford 38·6 and 40·0, Newcastle-upon-Tyne 37·0 and 38·2, Glasgow 39·7 and 37·8, Sheffield 38·4 and 37·7, Edinburgh 35·9 and 36·4, Liverpool 37·3 and 35·4, Bristol 33·5 and 35·1, London 34·6 and 34·7, Manchester 37·2 and 34·4, Birmingham 35·9 and 34·4, Dublin 28·3 and 25·3.

Increase of Population.—The natural increase of population in England and Wales in the 92 days, or the excess of births over deaths, was 75,750, or more by 13,649 than the excess in the corresponding quarter of the previous year. This addition, however, to the population of the country was greatly reduced by emigration.

The number of emigrants from ports in the United Kingdom was 70,734, of whom 30,114 were of English, 7873 of Scotch, and 18,855 of Irish origin, while 13,892 were foreigners. The most noticeable feature in the return is the increased activity with which emigration proceeded

during the quarter. Those who sailed from ports where Government emigration agents are not stationed, are not included in the returns. The greatest proportional increase as regards nationality appears to have taken place amongst the English and Scotch emigrating to the United States and to British North America. The number of Irish who emigrated during the quarter is only 3171 in excess of that in the corresponding season of 1868. In the total number of emigrants the increase was 18,109. Of the English emigrants 54,925 sailed to the United States of America, 10,131 to British North America, 4662 to the Australian colonies, and 1016 to other places.

Prices, Pauperism, and the Weather.—The price of wheat rose from 45*s.* 7*d.* per quarter in the three months ending 30th June 1869 to 50*s.* 11*d.* per quarter in the succeeding three months. In the same period of 1868 it had been 59*s.* 1*d.*, and in that of 1867, 65*s.* 4*d.* In the last eight quarters the decrease amounted to 22 per cent. Potatoes were also lower in price than in the summer of 1867 by 14 per cent. The mean price per ton for the best quality at the waterside market in Southwark in each of the three summer quarters of 1867–69 was 127*s.* 6*d.*, 147*s.* 6*d*, and 110*s.* respectively. Beef as sold by the carcase at Smithfield Market ranged from 4¾*d.* to 7½*d.* per lb. according to quality. Mutton ranged from 5¼*d.* to 7½*d.* per lb. Both beef and mutton were about ½*d.* per lb. dearer than in the summer quarter of 1868. The rise is perhaps due to continued interference with the cattle trade.

The returns of pauperism were heavy. The average number of persons relieved on the last day of each week in each of the quarters ending 30th September 1867, 1868, and 1869 respectively, was as follows :—

	In-door.	Out-door.
Quarter ending 30th September 1867	129,860	743,965
„ „ 1868	138,284	778,804
„ „ 1869	137,599	780,398

Mr. Glaisher remarks on the meteorology of the quarter that a remarkably cold period set in on the 10th of June and lasted until the 3d of July, after which a warm period, with very little rain, prevailed until the end of the month. On 1st August the weather suddenly changed, and for 21 days there was an average daily deficiency in the temperature of 2°·8. This was followed by a week of very warm weather with brilliant sunshine, and on the 28th August the excess of temperature was as much as 12°. From the 29th August to the 3d September it was cloudy, bleak, and cold; but on the 4th the temperature again rose above the average, and continued generally warm until the end of the quarter, with frequent heavy gales and storms. The mean excess of temperature for the 92 days averaged 1·9° daily.

In July the mean reading of the barometer was remarkbly high, being 29·928 in. Only two instances in the preceding 20 years are recorded when such high readings in July were observed, viz., in 1859 and 1863, on which occasions 29·937 in., and 29·961 in. were registered. In August the mean reading was still higher, being 29·968 in.; only one reading approximated to it during the preceding 20 years, viz., in 1864, when it was 29·918 in. In September the reading was very low, viz. 29·642 in., and during the preceding 20 years, the only instances when the mean readings for September were about the same, were in 1841 and 1866, viz., 29·624 in. and 29·575 in. respectively. During the periods of great barometric depression in September, violent gales raged from the south-west, which caused great destruction of life and property.

The mean temperature of the quarter was 61°·4 or 1°·9 above the average of 98 years. In July it was 3°·1 higher than the average; in August 0°·1 higher, while in September it was 2·5° higher. The rainfall for the quarter amounted to 4·9 in. or 2·5 in. below the average of the season; in September it was 0·7 in. in excess of the average.

Harvest work began in the south of England early in August, and became general towards the end of the month; by the end of September it was completed except in the north-west of Ireland, and in the Scottish Highlands.

Deaths; and the State of the Public Health.—The number of deaths registered in the third, or summer quarter of the year was 114,644, or 15,838 less than in the same period of 1868, when the prevalence of diarrhœa in London and in other large towns raised the number of deaths considerably above the average. The rate of mortality in the quarter was 20·8 per 1000, and in the same quarter of 1868 it was 23·9, the average of the season being 20·6.

Taking the eleven great divisions of the country as they appear in the tables, it will be seen that in London, 19,306 deaths were registered, compared with 19,248 in 1868, and 16,567 in 1867; the mortality of the quarter was at the rate of 24·3 per 1000. Small-pox caused 62 deaths, measles 337, whooping-cough 869, typhus 534, diarrhœa 2644, summer cholera 192, diphtheria 85, and scarlet fever 1770; this last disease was epidemic and increased rapidly from 75 deaths in the third week of the quarter to 238 in the last week. Few districts were exempt from this disease, but it was most fatal in the East districts, where 642 deaths were ascribed to it; in the West districts it caused 127 deaths, in the North districts 315, in the Central 247, and in the South 439.

In the South Eastern Counties 9538 deaths occurred, being 1280 fewer than in the summer of 1868; the rate of mortality was 18·4 per 1000. Diarrhœa and scarlet fever prevailed in many places; the latter disease causing 32 deaths in Croydon, 22 of the 85 deaths in Alton sub-district, and 29 of the 89 deaths in St. Mary Reading, the mortality in which town greatly exceeded the average, the deaths in summer quarter in the last three years being 121, 163, and 210 respectively.

The South Midland Counties showed a death-rate of 18·9. Typhus and scarlet fever visited several districts, Wycombe suffered severely from the latter disease, and in the West Wycombe sub-district it caused 23 of the 49 deaths.

In the Eastern Counties the mortality was at the annual rate of 18·4 per 1000. The Registrars' notes record several instances of the prevalence of diarrhœa, typhus, small-pox, and scarlet fever. In West Ham there were 527 deaths from all causes, compared with 369 in the same season of 1867, and 473 in 1868; in Yarmouth the deaths were fewer than in 1867 and 1868, the numbers being 232, 306, and 192 respectively.

The South Western Counties had a death-rate not exceeding 17·1, and compare favourably with the other groups of counties. Chippenham suffered from fever, Devizes and Warminster from small-pox, Exeter severely from measles, Tiverton from scarlet fever. Nearly all the large towns in Devonshire experienced a high mortality.

In the West Midland Counties the mortality was at the rate of 18·8 per 1000 annually; all the counties, and particularly Warwickshire, showed a decrease on the same period of 1868; the district of Warwick, however, had an increased mortality, without any cause being assigned by the Registrars. Scarlet fever was very fatal in Shrewsbury, West Bromwich, Dudley, and Coventry, and this disease, as well as typhus, prevailed to some extent in other districts.

In the North Midland Counties, which had a death-rate of 20·0, Butterworth and Basford were reported by the Registrars to have suffered greatly from malignant scarlet fever, which prevailed also, but with less severity, in many other places. Leicester had a rate of mortality of 28·9 per 1000, and it perhaps suffered more severely from diarrhœa than any other large town in England, and the mortality among young children was excessive; to every 100 births registered there were 26·8 deaths of infants under one year of age.

The rate of mortality in the North Western Counties was 23·2, and the Registrars' notes show how severely many of the large towns suffered from zymotic diseases. In Liverpool and West Derby, typhus, scarlet fever, measles, and diarrhœa were extremely fatal. Wigan, Chorlton, Salford, Manchester, and Preston had a high mortality from diarrhœa, and scarlet fever visited with great severity Bolton, Oldham, Rochdale, Haslingden, Clitheroe, and Blackburn.

In Yorkshire, where the mortality was 23·9 per 1000, scarlet fever prevailed in Wharfedale, some parts of Huddersfield, Halifax, and Bradford, in Dewsbury, Barnsley, Sheffield, Lockington sub-district of Beverley, Sculcoates, Hull, Hornsea sub-district of Skirlaugh and Scarborough. The sub-district of Northallerton was in a very unhealthy state, particularly the village of Osmotherley. In Halifax there was a remarkable infant mortality; to every 100 births registered there were 26·9 deaths of children under one year of age.

The Northern Counties had a death-rate of 21·3. Scarlet fever was most fatal in Stockton, some parts of Durham, Chester-le-Street, Gateshead, Tynemouth, and Whitehaven. In Cockermouth the mortality was 33 per cent. lower than in 1868.

Monmouthshire and Wales experienced the lowest rate of mortality, 16·9 per 1000. Scarlet fever caused 25 of the 62 deaths in the Coleford sub-district of Monmouth; the same disease also prevailed at Merthyr Tydfil, Swansea, Holywell, and Denbigh sub-district of St. Asaph.

The eleven millions of persons living in the chief towns experienced an annual rate of mortality during the quarter of 23·3 per 1000 living, as compared with an average of 22·9; while the inhabitants of small towns and country parishes, numbering somewhat more than nine millions, only suffered to the extent of 17·4, the average rate being 17·8 per 1000.

Of eleven of the largest English cities and boroughs, Liverpool exhibited the highest death-rate, 30·5 per 1000; next followed Manchester 29·3, Leeds 27·2, Salford 25·9, Sheffield 25·7, Hull 25·2, Bradford 24·6, London 24·3, Newcastle-on-Tyne 23·7, Bristol 21·7, and Birmingham 21·4.

Among the forty-six towns next in size, instances of high mortality are shown in Gateshead 30·3 per 1000, Leicester 28·9, East Stonehouse 27·4, South Shields 26·5, Halifax 26·2, Tynemouth 26·2, and Exeter 26·0. The lowest death-rates appear in Merthyr Tydfil 15·8 per 1000, Dudley 16·5, Chester 16·6, Walsall 16·8, and Gosport 16·9.

The large amount of preventible mortality has frequently been alluded to in these reports, but the statement sometimes has all the freshness of novelty; as an illustration of this waste of life it may be repeated with advantage that during the ten years between the last two censuses—1851-60—thirty large towns, having a mean aggregate population of 2½ millions, lost *every year* 32,735 persons more than would have died had they been subject only to the rate of mortality prevailing in the healthy districts of England.

The most striking feature of this return was the extensive prevalence of scarlet fever. This highly contagious disease finds in the crowded quarters of our large towns all the conditions favourable to its extension; the skill and energy of the medical profession and more particularly of the officers of health are taxed to the utmost in dealing with the disease, in endeavouring where possible to separate the sick and the dying, and in making generally known the precautions most needful; their humane efforts are however beset with difficulties. Until better habitations are within reach of the labouring and poorer classes, until decent public mortuaries are provided in all populous towns, and perhaps also until the rudiments of physiology are included in the education of our youth, so that all who read may know something of the laws by which we live and have our being, we cannot extinguish with needful rapidity the oft recurring visitations of epidemics like that we are now considering; for ignorance is the foster-mother of disease as well as of crime.

Fourth Quarter.—October, November, December.

In the United Kingdom the births of 252,046 children, and the deaths of 168,169 persons of both sexes, were registered in the three months ending on Debember 31st. The natural increase of population was thus 83,877.

The number of persons married in the quarter ending December 31st, 1869, was 129,106.

The death rate of the Kingdom differs little from that prevailing in England and Wales.

The resident population in the middle of 1869 is estimated at 30,621,431; that of England and Wales amounting to 21,869,607, of Scotland to 3,205,481, and of Ireland to 5,546,343. The corrected death-rate of the quarter is 23·3 per 1000; the birth-rate 34·5; the marriage-rate 17·6.

The several facts concerning Scotland and Ireland are recorded in the quarterly reports of the Registrars General of those parts of the Kingdom.

England.—Marriages, which had been declining every Christmas quarter since the year 1865, evinced a disposition to revive in the last quarter of 1869. The births were slightly and the deaths considerably in excess of the average.

Marriages.—104,076 persons married in the Christmas quarter of the past year. The number exceeds by 1290 the number in the previous Christmas quarter. The marriage-rate of the season remained, as in the two previous autumn seasons, below the average; it was 18·8 to 1000 living. Marriage was below the rate of the previous Christmas quarter in London, Lancashire, and Yorkshire; the rise was chiefly in the Midland and the Western Counties.

Births.—The number of births registered in England in the three months ending 31st December 1869 was 190,594, or more than 2000 less than in the autumn of 1868. The birth-rate of the quarter, however, 34·4 per cent., compares favourably with the average of 10 corresponding seasons, which was 33·8.

Increase of Population.—The births of the last quarter of the year were in excess of the deaths by 62,453, and if emigration and immigration had been equal, this number would represent an average daily increase of population during the three months of 679.

The total number of emigrants who left ports of the United Kingdom where there are Emigration officers, in the quarter ending 31st December 1869, was 38,481, of whom 16,762 were of English, 4123 of Scotch, and 10,305 of Irish origin, while 7291 were foreigners. 31,695 were bound for the United States, 1989 for the North American Colonies, 3826 for the Australian Colonies, and 971 for other places. The emigration was greater than it had been in any autumn quarter since 1865. On an average, emigration carried off 182 emigrants of English origin daily. After deducting this number from the natural increase of population, the daily increase becomes 497.

Prices, Pauperism, and the Weather.—The average price of wheat fell from 67*s.* 11*d.* in the autumn of 1867 and 51*s.* 11*d.* in the autumn of 1868 to 46*s.* 0*d.* per quarter in the last 13 weeks of 1869, so that the reduction in the last eight quarters amounted to 32 per cent. The best beef was a halfpenny a lb. dearer than it was at the end of 1868, while the price of inferior beef was a farthing per lb. dearer. Inferior mutton was a halfpenny a lb. dearer than it was at the close of 1868; superior mutton was three farthings a lb. dearer. Potatoes were cheaper than they were in the autumn of 1868. The wholesale price at Waterside Market, Southwark was 3*s.* 9*d.* to 5*s.* a hundred weight, according to quality.

The returns of pauperism still continued heavy. The average number of persons relieved on the last day of each week in each of the quarters ending 31st December 1867, 1868, and 1869 respectively, was as follows :—

	In-door.	Out-door.
Quarter ending 31st December 1867	145,886	771,754
„ „ 1868	152,733	797,546
„ „ 1869	151,996	813,315

The weather was characterized by alternations of high and low temperatures, circumstances which could hardly fail to injuriously affect the public health. The mean temperature of the whole quarter was 43·3, which is about half a degree below the average of 98 years. The amount of rain measured was 7 inches, a quantity which very closely represents the average fall. There were several very heavy gales of wind during the quarter, and pressures of wind were recorded of 30 lbs. on the square foot.

Deaths; and the State of the Public Health.—In the last 92 days of the year 1869 as many as 128,141 deaths were registered. This number is 7687 more than in same period of 1868, and 11,944 more than in the last quarter of 1867.

The mortality was at the annual rate of 23·2 per 1000 living, whereas the rate in the same season during the ten previous years was 21·9 per 1000; the names of nearly 7000 persons have thus been added to the death registers of England during the last 3 months of the year who would not have found a place there had the ordinary rate of mortality prevailed.

It is noticeable that while the excess in the death-rate of the previous 3 months, ending 30th September, was caused by the high mortality in large towns, in the last quarter of the year the excess was shared by the small towns and country parishes.

The chief towns, inhabited by more than eleven millions of persons, experienced a death-rate during the quarter of 25·8 per 1000 annually, the average of the season being 24·3 per 1000; the inhabitants of the small towns and rural parishes died during the same period at the annual rate of 19·7, the average being 18·9.

The 14 greatest cities and towns among them, peopled by more than six and a half millions inhabitants, suffered a mortality at the annual rate of 27·6 per 1000 living.

Of the English towns in this group, Sheffield showed the highest rate, 30·8 per 1000; Manchester followed with a rate of 30·6; Salford 29·1; Liverpool 28·9; Leeds 27·9. Birmingham had the lowest mortality, 25·7; Hull 26·0; Bradford 26·0; while it is gratifying to notice that the rate of 26·4 per 1000 in Newcastle-on-Tyne indicated a considerable improvement in the health of that town.

In the 46 towns next in importance, having an aggregate population of 2,819,555, the death-rate during the quarter was at the rate of 24·4 per 1000 annually. Among these the following showed the highest rates of mortality; Blackburn 38·0 per 1000; Swansea 31·6; Gateshead 30·9; Exeter 30·0; Derby 29·9; Nottingham 29·8; and Bolton 29·5. Comparing favourably with these are Gosport 16·8 per 1000; Yarmouth 19·1; Norwich 19·2; Merthyr Tydfil 19·2; Plymouth 19·8; Devonport 20·5; and Ashton-under-Lyne 20·6.

Of the eleven great divisions of the country, in the first, London, 21,186 deaths were registered in the last three months of the year, compared with 19,416 in 1868, and the mortality was at the annual rate of 26·7 per 1000. Small-pox caused 87 deaths, measles 473, diphtheria 113, whooping-cough 823, typhus 552, diarrhœa 368, and scarlet fever 2710; this epidemic prevailed with remarkable intensity, increasing from 75 deaths in the third week of July to 245 early in December; from

this maximum number it subsided gradually, and the deaths amounted to 159 in the last week of the year. It was most fatal in the East Districts, where the mortality from the disease was at the annual rate of 51 per 10,000 living; in the North Districts it was 30·1, in the South Districts 39·1, in the Central Districts 29·4, and in the West Districts 14·7 per 10,000 living.

The South Eastern Counties had a death-roll of 10,466, being at the annual rate of 20·2 per 1000. Scarlet fever caused 15 of the 57 deaths in the Carshalton sub-district of Epsom, 35 of the 319 deaths in the sub-district of Croydon, 10 of the 40 deaths in Mortlake, 6 of the 21 deaths in Hoo, 21 out of 77 in Eastbourne, 17 of 63 in the Broadwater sub-district of Worthing, 12 of 31 in the Farnborough sub-district, 10 of 27 in Bramley, Basingstoke, 19 of 84 in Abingdon, and 82 of the 235 deaths in Reading. Measles prevailed in Dartford, Rochester, Ryde, and Hastings, which experienced a high rate of mortality. There were 12 deaths from fever and 4 from scarlet fever in Tonbridge. Scarlet fever and whooping-cough caused many deaths in Brighton; and Portsea Island suffered from measles and scarlet fever.

In the South Midland Counties the mortality was at the rate of 20·8 per 1000. Scarlet fever prevailed in every county and was most noticeable in Willesden, Edmonton, Aylesbury, and Wycombe. Measles was most fatal in Royston, Watford, and the Duxford sub-district of Linton.

Fever caused 10 deaths in Huntingdon, and diarrhœa 7 in Biggleswade.

The Eastern Counties experienced a mortality of 19·8 per 1000, which compares favourably with the other divisions of the country. West Ham was severely visited by scarlet fever, measles, whooping-cough, and typhus. In the parish of Sheering, Epping, 20 persons contracted typhoid fever, of whom 4 died. The Registrar of the Newport sub-district of Saffron Walden reported:—

"Fever of a typhoid nature has prevailed in the parish of Wicken; about 50 cases have occurred up to the present time, and 9 deaths. The impurity of the water is alleged as the principal cause."

Colchester and Witham suffered from scarlet fever; diphtheria was fatal to 3 persons in one family in Melford, Sudbury, and 5 deaths were referred to that disease in the Attleborough sub-district of Wayland. In Docking there were 107 deaths compared with 60 in the same period of 1868.

In the South-western Counties the death-rate was 20·2. Seventy persons have suffered from small-pox in Warminster since its first outbreak in the spring of the year. Measles and scarlet fever prevailed in many districts. Exeter experienced a high death-rate, the number of deaths being 261, compared with 176 in the corresponding period of 1868. In the North Hill sub-district of Launceston 31 of the 60 deaths were from measles, which was very fatal in the parish of Stoke Climsland.

In the West Midland Counties the mortality was at the annual rate of 22·1 per 1000. Bristol, Clifton, Cheltenham, Stafford, West Bromwich, Stourbridge, Droitwich, Kings Norton, Foleshill, and Warwick, are districts in which the deaths largely exceeded the average. Scarlatina and measles prevailed in most of the districts. West Bromwich suffered severely from measles, scarlet fever, diphtheria, typhus, and diarrhœa.

The North Midland Counties experienced a death-rate of 22·1 per 1000. In Leicester the deaths amounted to 599, compared with 492 in 1868, measles, fever, and diarrhœa were fatal. In Nottingham, where scarlet fever and typhus prevailed, the deaths largely exceeded the average of the season. Derby was visited by measles, scarlet fever, and typhus; and Belper suffered severely from scarlet fever, and to a less extent from typhus.

In Cheshire and Lancashire the death-rate was 25·7 per 1000. The mortality was much above the average in Macclesfield, Bolton, Oldham, Rochdale, Haslingden, and Blackburn; this last town was ravaged by scarlet fever, and 154 out of 792 deaths in the Blackburn sub-district, were from this disease, which was prevalent in many other districts.

In Yorkshire the mortality was 26·5 per 1000; in the West Riding the following districts are conspicuous for having an unusual number of deaths, Wharfedale, Huddersfield, Bradford, Dewsbury, Wakefield, Barnsley, Sheffield, and Ecclesall Bierlow; small-pox, scarlet fever, and typhus were prevalent. The Registrar of Ecclesall Bierlow reported:—

"Measles caused 15 deaths, scarlet fever 83, diphtheria 7, fever 27. 40 of the deaths have occurred at Heeley, a suburban village with some 4000 inhabitants, 20 of that number resulting from scarlet fever, which has raged with unusual virulence. The village is badly drained."

In the East Riding, York, Sculcoates, and Hull were visited severely by scarlet fever, which was also fatal in Scarborough, Thirsk, Whitby, and Stokesley in the North Riding.

The Northern Counties had a death-rate of 22·8 per 1000. Darlington, Stockton, Tanfield sub-district of Durham, Chester-le-Street,

Newcastle-on-Tyne, and Tynemouth suffered much from scarlet fever; measles and typhus prevailed in South Shields; typhus and typhoid fever caused 31 deaths in Whitehaven. Several districts in these counties had fewer deaths than usual, in Cockermouth the number was 222 against 328 in the same period of 1867, and 300 in 1868.

Monmouthshire and Wales show the lowest rate of mortality of the eleven divisions, it was 19·60 per 1000 annually in the last quarter of the year. The districts of Bedwelty, Swansea, and Gower have a conspicuous increase of mortality; there were 28 deaths from scarlet fever and 13 from fever in Aberystruth sub-district of Bedwelty; 10 of the 75 deaths in Bridgend were from measles; 12 of 62 deaths were from scarlet fever in Ystradgunlais; scarlet fever was distressingly fatal in Swansea, causing 123 of the 366 deaths in the sub-district; 13 of the 74 deaths in Haverfordwest are referred to measles, which also prevailed in Bridgend, and in the Denbigh sub-district of St. Asaph.

It will be seen from this return that scarlet fever, the prevalence of which was remarked on in the previous quarterly statement, increased in intensity and spread over a larger area. Professor Tyndall has shown that the countless myriads of motes that are seen dancing in every sunbeam are organic particles, and among them are zymotic bodies which are germs of disease. These bodies are in concentrated force in the rooms occupied by persons suffering from or who have died of scarlet fever, hence the absolute necessity of isolating the sick as much as possible and of adopting the precautions for the hygienic management of the invalid chamber which have been drawn up by the medical officers of health, by the medical officer of the Privy Council, by Dr. Budd of Bristol, and other authorities.

By the intelligent observance of these precautions something may be effected in arresting the progress of this fatal epidemic.

Table 45.—Average Annual Rate of Mortality to 1000 of the Population in the 11 Divisions of England in the 10 Years 1851-60, and in the Year 1869.

* The mortality for the *year* 1869 is the mean of the quarterly rates.

Health of London in 1869.*

At this distance of time from the date of the last Census the populations of the great English cities can only be conjectured. They necessarily vary from year to year; as their increase depends upon the births and deaths, and upon the strength of the two opposite currents of migration inwards and outwards. Yet the growth of London, as well as of many of its sister cities, has latterly from decade to decade been constant, and has fluctuated within narrow limits of variation; so the estimated number of 3,170,754 souls for the year 1869 probably differs little from the true figure of the population living on the hills, acclivities, and banks on both sides of the Thames. This population is within the domain of the Metropolitan Board of Works.

Outside this area of 122 square miles is a broad circle every year spreading, and occupied, in the year 1869, within the Metropolitan Police District by full 524,535 souls. The drainage of these outlying parts is excluded from the Metropolitan scheme. The water companies and the gas companies often supply both regions.

The registered births in London were 111,930, and as usual largely exceeded the deaths. The excess of births over deaths in the 52 weeks was 33,997. If the calculated growth is correct, the immigrants must have exceeded the emigrants by some 10,000.

The mortality of the year fluctuates with the seasons, and with the zymotic activity of disease. In the year before us the mortality was exceptionally high: 77,933 deaths were registered, and the mortality was at the annual rate of 24·66 (nearly 25) in 1000; the males dying at the annual rate of 27, the females at the annual rate of 23 in 1000.

* Reprinted from the "Annual Summary" for 1869.

† For the years 1849-59 the results are only approximative, having been reduced to Robinson's Anemometer from observations made with Whewell's.

‡ By Robinson's Anemometer.

12,298 of the deaths took place in 120 public institutions; no less than 7068 in 47 workhouses, 4329 in 26 general and special hospitals, 336 in 19 lunatic asylums, and 83 in 12 prisons.

The greatest number of deaths in single institutions were: 499 in Marylebone workhouse, 502 in Pancras workhouse, 574 in St. Bartholomew's Hospital, 479 in the London Hospital, 495 in Guy's Hospital, and 518 in the London Fever Hospital.

It is evident that if no such provision existed as the Poor Law affords, and the charity of hospitals supplies, great numbers of the people of London would have in old age and in sickness a dread prospect before them. And it is gratifying to note, that with the progress of civilization, that pious reverence which led the Greeks and the Romans to provide, at great sacrifices, the rites of sepulture to the dead, is now extended to provide some mitigation of their sorrows to the sick.

But can no further progress be made? Has everything been done when the old work-worn artizan, or the ratepayer of past years, is mixed in the common wards of the workhouse, with the worst types of humanity? Then what numbers enter the workhouses alive, and are carried out dead! Some explanation is required of the 499 deaths in Marylebone, of the 502 deaths in Pancras workhouse. Yet no reports, by the medical officers, appear to be published.

The hospitals now supply reports by very competent registrars. The question remains; how can the advantages of hospital organization be enjoyed without visiting on the inmates the evil influences of the atmosphere of disease in which they are steeped? The spread of fever is limited by despatching patients to fever hospitals. But 518 deaths in a year in one institution is a startling number.

Howard's devotion to the criminal population rescued them from the hands of fever, and our prisons are now models, which only excite regret that their favourable sanitary conditions cannot be placed within reach of honest labourers.

Scarlet fever, whooping-cough, and diarrhœa have been the reigning epidemics of the year; to them 12,958 deaths were referred. Of the three forms of continued fever, enteric fever was the most prevalent.

More than half of the deaths in London (41,584) occurred under 20 years of age; in the next three vicenniads the deaths ranged from 10,044 to 11,814 and 11,961; only 2530 of the dead had attained the extreme bourne of life, 80 years and upwards. The annual rate of mortality per 1000 in five vicenniads was 30 in childhood and youth, 10 in prime manhood, 21 in full age, 65 in mature age, and 212 in old age.

ANNUAL MORTALITY per 1000 -	22·4	23·9	22·7	22·5	23·2	23·6	24·5	26·5	24·6	26·5	23·0	23·6	24·6

The average mortality for 30 years of the five regions of London ranges from 23 in the North and 23 in the West, to 25 in the South, 25 in the Central, to 26 in the East Districts. In the year 1869 the mortality exceeded these averages everywhere except in the West Districts and in South London where the effects of drainage are manifest. The mortality was at the rate of 28 per 1000 in the East Districts.

The element influencing mortality, which has undergone the greatest changes in recent times, is the system of drainage. The salutary effect of this great engineering work is, as has been already shown, patent; but its full influence can only be experienced when the works are completed and supplemented. On the north side progress has been made with the low-level sewer since last year; but it is not yet finished. A mishap at the Abbey Mills pumping station has also led to some confusion. The smaller drains are in the hands of the district Boards, and the house proprietors: here some progress too has been made. The discharge of the sewage into the Thames at Crossness and Barking is a removal of the dirt of London from the dwellings of its inhabitants to the river, where it is diluted, tossed backwards and forwards below Barking and Crossness; when at the end of a fortnight its residue is found a few miles down the river nearer the sea. The pollution of the river by sewage above London is for the future to be prohibited; but there is no clear evidence of any measure to put the sewage on the land for purification below London. The irrepressible malaria can only be subdued by cultivation and vegetation: how this is to be done is the great engineering and agricultural problem of the day. It is now engaging the attention of a competent Committee of the British Association.

The area in the Police district around London, comprising 361,773 acres, about 94,087 inhabited houses, and a population of 524,535, has now no right of drainage; so that a most deplorable state of things is springing up, which must end fatally unless it is met at an early period.

Here it is in vain that the Royal Commissioners to inquire into the best mode of distributing the sewage of towns, have confidence in submitting their conclusion that: "The right way to dispose of town sewage is to "apply it continuously to land, and it is only by such application that "the pollution of rivers can be avoided."* How is the land for irri-

† This Table is compiled from the Weekly Returns made by the Registrars of London, and relates to the 52 or 53 weeks of each year. The figures for 1869 will not agree with those found on page 196, which relate to the correct year instead of 52 weeks; moreover that the same Institutions are not in all cases included in each list.

* Cited by Mr. Rawlinson in Appendix (p. xi.) to his important Barking Report.

gation to be procured? At what cost? And what will be the consequence of a series of exhaling damp beds on which the sewage of half-a-million, a million, or more people is distributed in all the seasons of the year? What people will accept the proximity of such rich moist meadows? To remote fields the sewage of large isolated towns like Croydon may be carried. But by some other methods this engineering problem of the London suburbs must be solved, and assuredly it is soluble. The mechanism to bring products to the London market, and to distribute them is provided; and so may be the mechanism to return their residue to the earth from which they came.

Every successive year shows the increasing importance of a vigilant supervision of the qualities of the water supply, by a chemist in whose integrity and skill implicit confidence can be placed.

Average Number living to One Death annually (1840–69)	41	44	44	40	38	40

NOTE.—The Annual Rate of Mortality in this Table is deduced from the Population at the Censuses of 1841, 1851, and 1861, and from the Deaths registered in London in each of the several years.

The Mortality for LONDON in each year, 1840–69 is calculated on the Deaths for the complete years, instead of for 52 or 53 weeks.

1870 -	**31,232,013**	15,121,679	16,110,334

* In estimating the number of men in the Army, Navy, and Merchant Service abroad, a certain proportion belonging to foreign countries and the colonies has been excluded. In 1811 the troops and seamen were 640,500, but as this number included natives of colonies and foreign parts, only 502,536 were taken.

[The above numbers (1801–61) have been deduced by raising the enumerated population of the United Kingdom, including the islands in the British Seas, (*see* Table 9. p. 84. of Vol. III. Census of England and Wales, 1861,) up to the middle of the respective Census years. In 1866–1870 the numbers have been estimated by adding the population enumerated in the islands in the British Seas in 1861, and the number of men in the Army, Navy, and Merchant Service abroad, (*see* Tables 3. and 16. pp. 81. and 87. Vol. III. Census 1861,) to the population for 1866–70, returned in Table 61. pp. 68–69.]

junction with the Registrars General of Scotland and Ireland. The population of the islands in Census taken 3rd April 1871 are available, new estimates for the years 1861–70, based upon the be substituted for those given above.

REMARKS on the METEOROLOGY of 1869; compiled from Tables, &c., furnished by JAMES GLAISHER, Esq., F.R.S., &c., *Secretary of the Meteorological Society.*

In the year 1868 the meteorology was remarkable for long continuance of high temperature, for unusual distribution of rain, and for a generally early season of vegetation. In 1869, however, the several meteorological conditions differed but slightly from the average of 21 years, excepting perhaps that the mean weekly movement of the air was still greater than in 1868, and averaged 2,043 miles, exceeding the average by 299 miles. The annual means of the various elements at the several stations between Guernsey and North Shields are shown below, in Table 59.

These results naturally varied considerably at these several stations, but, so far as concerns the excess or deficiency above or below the average, the observations at the Royal Observatory, Greenwich, may be taken as generally applicable to the whole country.

Atmospheric Pressure.—The readings of the barometer showed considerable fluctuations early in January, but with a few exceptions were constantly above the average from 6th to 25th. From this date to 3rd February the readings were low, and at noon on 1st 28·83 was recorded. No remarkable fluctuations then occurred until a steady increase commenced on 21st, which reached its maximum, 30·12, on 23rd March, after which a rapid decrease set in, and the readings were below the average during the rest of the month. The readings during April were generally above the average, but a depression to 29·06 occurred between 15th and 17th. In May a steady fall took place to 29·01 on 6th, after which an increase culminated in a maximum of 30·06 on 13th. Frequent fluctuations occurred from this date to the end of June, and throughout this month, with but few exceptions, the readings were either above or very close to 30 inches. The mean readings throughout July and August were unusually high, 29·93 and 29·97 respectively. In September the mean reading

was, however, very low, 29·64. The highest reading in these three months was 30·26, on 1st September. During October the readings were generally high, and remarkably steady between 4th and 14th; by the 16th they had fallen, however, to 29·13; from 20th to the end of the month they, with two exceptions, again showed an excess. Early in November the readings were low, while from 10th to 21st they were above the average; a sudden fall then took place from 30·18 on 21st, to 29·03 on 22nd; although the readings subsequently increased they were generally in defect until the end of the month. The fluctuations in December were frequent and considerable; on 6th 30·40 was recorded; on 13th the lowest reading was 29·02; on 16th a rapid fall took place from 29·65 to 28·77; the range of readings in this month was so great as 1·62 inches.

Temperature.—With the exception of the seven days from 19th to 25th January the whole of the months of January and February were remarkably warm; during March, however, weather of a decidedly wintry

character prevailed, and continued until 5th April. From 6th to 29th April the weather was warm, but during May, and especially towards the latter end of the month, the mean temperature was considerably below the average. After a short period of warm weather from 2nd to 8th June, a severe period of cold again set in, and with scarcely a day's intermission continued until 3rd July. From 4th July until the end of the month a warm period prevailed. Between 1st and 21st August the mean temperature was below the average, followed by a week's warm weather; from 29th August till 3rd September the weather was cloudy, bleak, and cold, but after the 4th the remainder of the month was generally warm, and so continued until 16th October. After the 16th the weather suddenly changed, and was cold and wintry until the end of October. During the first half of November remarkable alternations of temperature occurred; from 13th to 16th high temperatures with heavy gales of wind prevailed. Cold weather again set in on 17th November and continued to the end of the

year, excepting only a warm period from 10th to 20th of December. The mean temperature of the year at the Royal Observatory, Greenwich, was 49°·5, and 0°·1 above the average of 21 years; it was however two degrees lower than the mean of 1868. At the several stations at which observations were reported the mean temperature of the year ranged from 47°·0 in Hull, to 54°·4 in Barnstaple. The coldest day of the year was 23d January, when the mean temperature was 29°·8; the warmest day was 17th July, when the mean was 73°·5.

Rainfall.—In both January and February the rainfall was somewhat above the average, while there was a slight deficiency in March. In April only one inch of rain was measured, which was but two thirds of the average quantity; in May the 3·4 inches showed a considerable excess, while June again was unusually dry, as were both July and August. In September the rainfall showed an excess, in October a considerable deficiency, while in November the amount measured corresponded with the average; in December again there was a slight excess. The rainfall of the year at the Royal Observatory amounted to 24 inches, which was two tenths of an inch below the average of 21 years, and 1·2 inches below the fall in 1868. At the several stations for observation, furnishing reports, the rainfall of the year varied from 21·4 inches at Cardington and 21·6 inches at Eastbourne, to 47·9, 54·3, and 54·6 inches respectively at Lampeter, Stonyhurst, and Allenheads. Rain fell on but 123 days of the year at Strathfield Turgiss, and on 267 days at Allenheads; at the Royal Observatory, Greenwich, rain was measured on 147 days.

ANNUAL ABSTRACTS

* The *Registration Counties* consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

the Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1869.

† Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. This column also includes 47 cases of marriage after divorce, viz., 15 *divorced men* who married spinsters, 5 divorced *men* who married widows, 17 bachelors who married *divorced women*, 8 widowers who married *divorced women*, and 2 *divorced men* who married *divorced women*. For the districts in which these marriages took place, see subsequent pages.

ABSTRACT OF MARRIAGES.—Marriages registered in England, pursuant to the

(*a*) The *Districts*, which are arranged according to their local position, are collections of contiguous Parishes or Places, generally identical with the Poor Law Unions of the same names.

(*b*) For the changes made in the constitution of the Superintendent Registrars' Districts during the year 1869, see pages 170-1. The marriages in the districts of Clerkenwell and St. Luke prior to 2d August have been added to Holborn.

* Includes a bachelor who married a *divorced* woman.

† Includes two *divorced* men who married spinsters and also a *divorced* man who married a widow.

‡ Includes a bachelor who married a *divorced* woman and also a *divorced* man who married a spinster.

§ Includes two bachelors who married *divorced* women and also a *divorced* man who married a *divorced* woman.

* For the changes made in the constitution of the Superintendent Registrars' districts during the year 1869, see pages 170–1. The marriages in the district of Kirkdeighton prior to the 30th June have been added to Wetherby; those in Kirkstall prior to the same date, to Leeds.

† The district of Aysgarth was, prior to *March* 1869, known as "Askrigg."

‡ Includes a bachelor who married a *divorced* woman.

§ Includes a bachelor who married a *divorced* woman and also a widower who married a *divorced* woman.

* The *Registration Counties* consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

† Some of the births—especially of illegitimate children in London and large towns—escape registration.

* The *Districts* are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages; and are generally identical with the Poor Law Unions of the same names. The Districts, 633 in number, are arranged according to their local position under the Registration Counties. The presence of Institutions in any District is indicated in this column of the Table by *H* for Hospital or Infirmary, *L* for Lunatic Asylum, and *w* for Workhouse situated out of the District to which it belongs; and repetitions of these letters show the number of such Institutions in any District. The smaller Institutions are not noticed.

† Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated.

‡ For the changes made during the year 1869, in the constitution of the Districts of Holborn, Guildford, Farnham, and Farnborough, *see* page 170.

* The Sub-districts are sub-divisions of the Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse belonging to *another* District or Union is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

† Wherever the minus sign (–) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated. The Excess of *Deaths* over Births in several of the Sub-districts of London is attributable to the mortality in Hospitals.

ENGLAND.—SUPPLEMENTARY TABLE of the

[The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all the Diseases, either having a distinct character, or fatal to any considerable number of persons, are classified under 116 heads; some of which, however, include groups of very distinct diseases,—such as are fatal to only a *few persons*, or *diseases* which are often confounded with other diseases. The rule has been to refer the distinct diseases to heads under which the cases were so numerous, that the additional numbers would not interfere with the calculated proportions. Where it is desired,

(*continued at page* 126.)

CAUSES of DEATH at different Periods of Life, in the Year 1869.

partial correction, however, can now be made by means of the following Supplementary Tables, containing many of the deaths from distinct diseases, such as chicken-pox, mumps, epistaxis, dry gangrene, polypus, rickets, bronchocele, &c. &c., and deaths from other forms of disease, such as softening of the brain (necrencephalus), which are returned in many cases under other heads, as paralysis, &c.

These Tables are an extension of the Tables of Causes of Death in England, pp. 118–123.]

* NOTE.—In calculating the average annual rate of mortality from all causes in London, a correction has been made by distributing the deaths in *hospitals* proportionally over every district. The second rate of mortality (in figures of different character) is the *result of a* further correction,—in Chelsea and Greenwich for the Military and Naval Hospitals, in Wandsworth for the County Lunatic Asylum, and in the other London Districts for Workhouses situated out of the Districts to which they belong.

In all the other Districts of England the second rate of mortality is the result of a correction for either a Naval or *Military Hospital* or Camp, a County Lunatic Asylum or a Workhouse situated out of the District to which it belongs. The particulars of *these corrections* are given in the Supplement to the 25th Report, pp. xl-lviii.

† For the changes made in the constitution of the Superintendent Registrars' Districts, *see pages 170-1.*

Population 1861, Average Annual Rate of Mortality from All Causes in the Ten Years 1851-60, and Deaths from several Causes in the Year 1869, in the DISTRICTS of England—*continued*.

* The following poisons were each fatal in one instance:—chrysanthemums, at age 2; muriatic acid and white bryoney berries, at age 3; nightshade, at age 10; sulphate of copper, at age 15; essential oil of almonds and chlorodyne, at age 25; potash, bella donna, and ammonia, at age 45; bichromate of potash, at age 55; and Burnett's disinfecting fluid, at age 65.

† Three deaths from suffocation by the following means were recorded:—Swallowing a nail, at age 3; swallowing a bead, at age 5; and the fumes of charcoal, at age 15.

‡ One death resulted from each of the following causes:—Swallowing—a bone, at age 2, a dress-hook, at the same age, and a button, at age 3; eating unripe gooseberries, at age 4; swallowing—an orange pip, at age 5, and a cherrystone at the same age; excessive smoking, at age 35, and bite of a dog, at age 65.

DEATHS IN LARGE PUBLIC INSTITUTIONS,

1869.

THE FOLLOWING PAGES contain the numbers of deaths registered during 1869 in each of the largest public institutions of England. These figures will afford the means of correcting the mortality of sub-districts and districts where affected by the situation therein of these large institutions, through the deaths recorded in them. The following list will not be found to contain all the public institutions in England and Wales, but only those which might reasonably be supposed to disturb (by the number of deaths recorded in them), the mortality of the sub-districts in which they are situated. All workhouses and large hospitals, infirmaries, or lunatic asylums are included, while prisons, almshouses, schools, as well as small private lunatic asylums, cottage hospitals, and benevolent asylums, are generally excluded, unless from exceptional circumstances they have been deemed of sufficient importance to demand special notice. The list, as settled, includes 1,002 institutions; of which 689 are workhouses, workhouse infirmaries, or workhouse schools; 241 hospitals or infirmaries; and 72 lunatic asylums, mostly public county asylums, but also including some large private asylums, many of which receive pauper patients.

Deaths registered in the principal **Public Institutions** of **England** in the **Year 1869.**

LETTER to the REGISTRAR GENERAL on the CAUSES of DEATH in ENGLAND in 1869, by WILLIAM FARR, Esq., M.D., F.R.S., D.C.L. . . . 215–220

TABLES 221–238

Letter to the Registrar General on the Causes of Death in England, by William Farr, Esq., M.D., F.R.S.

Year 1869.

Sir,

It is shown in your Report that the population of England increased somewhat more rapidly between 1861 and 1871 than it had increased in the previous decenniad; and that the rate of mortality has consequently been slightly overstated.

This correction being made, the year is found to be healthier than usual; and the mortality, in fact, from the class of zymotic diseases was below the average of the fifteen preceding years, although the formidable scarlet fever was both prevalent and fatal. The diseases of the respiratory organs owing to the cold weather in winter were unusually fatal.

I.—Zymotic Diseases.

Small-pox was not generally active; in London it was incubating, in Lancashire it was more active, and in Yorkshire the registers contain 610 deaths by the epidemic, of which 100 were recorded in the Sheffield, and 218 in the Dewsbury districts. In Hull and Sculcoates 71 deaths by small-pox were registered. Ipswich, in the Eastern Division, saw 32 die of small-pox. The prevalence of these outbreaks was chiefly on the East side of the Island. Measles, croup, and whooping-cough levied their customary toll, chiefly on children. Measles was most fatal in the North-Western, South-Western, and West-Midland Divisions, and London. Scarlet fever was terribly fatal: 27,641, chiefly children and young people, died of this disease (see Table 3, p. 221), 5841 in London, and 5234 in Lancashire and Cheshire.

Continued fevers have been for the first time distinguished in conformity with the decision of the Nomenclature Committee; and enteric fever (*typhia*) is found to be the prevailing form of the year, as to it 8659 deaths were referred against 4279 deaths by typhus; 5449 deaths were registered under the rather vague name of simple continued fever.

Diarrhœa, cholera, and dysentery, were as is usual, prevalent, but to a less degree than usual: yet to diarrhœa 19,903 deaths were referred, it being still one of the most fatal of zymotic diseases.

Though ague and rheumatism are less fatal, they cause much protracted sickness, to be diminished by drainage.

Under syphilis 1859 deaths were returned; the number of such deaths is rapidly increasing. The mortality thus designated has in 17 years risen in the ratio of 35 to 85. Some more effective steps are required to stop the ravages of this insidious disease which lies concealed by its remoteness but is the primary cause of many deaths returned under its ultimate transformations. The bones, the brain, the bowels are all infested by it. Innocent children are the chief but not the sole sufferers. Stricture of the urethra is inserted in this class because it is commonly the consequence of contagious disease.

Hydrophobia had been reduced to a low ebb until in the years 1865–6 it made a sudden start, and this canine infection was the death of 19 and 36 persons; the deaths in the two following years were 10 and 7; in 1869 they rose to 18.

Glanders is fatal to rather more than 4 persons annually; and 6 and 3 were the deaths ascribed to this equine infection in the two last years.

Under the system of Poor Laws only 52 deaths by privation chiefly adults were recorded in 1869: the deaths under this head have happily declined during the last three years from 109 to 96 and to 52. The annual mor-

tality to 1,000,000 was 5 and 4 and 2: the average of the last three years has been 3·7. Want of food in its various forms causes indirectly a variety of diseases under which its agency is masked in the registers: but it may be safely affirmed that in no country in Europe is death by starvation less common than in England under its Poor Laws, imperfect though they be. Even statists are misled by an obvious fallacy. It has been often inferred that because many people are relieved to a more or less extent, and figure as paupers in official returns, England has a greater proportion of starving people than other countries. Now to make a pauper in the official sense two things are required; suffering or poverty in one class, sympathy or wealth in another: in the absence of a legal system of relief, though there are no paupers, beggars and starvation abound.

The accompanying Table shows several important particulars respecting the deaths under this head. The deaths of females (137) are fewer than the deaths of males, 194. One third of the deaths occurred in London. The greatest number of deaths in any period of life is between 45 and 55.

The natural food for children is the breast-milk of the mother; and its want is justly considered a cause of death; to it and inanition of infancy 1408 deaths are referred.

Scurvy is warded off by the abundance of potatoes and other vegetables, but it has latterly increased in prevalence.

To delirium tremens, usually a form of alcoholic poisoning, 433 deaths were referred, to intemperance in drinking 331; making in the aggregate 764 deaths by one form or other of alcoholism: within the last three years the annual deaths by the poison of drink have happily declined to a considerable extent. We may hope ere long to see these cases further decline until drunkenness and excess in drink are no longer indulged in by any but the unfortunate monomaniacs who, for their own protection, and for the sake of society, require restraint.

Parasites, including hydatids, itch insect, tape worms, and worms of all descriptions still cause a certain number of deaths, which will probably diminish as the water-supply becomes purer, and the meat-supply is watched. The deaths by these creatures are induced by trains of maladies which are not always discriminated from other affections. The means of personal cleanliness, soap and abundance of pure water, should be placed within the reach of the whole population; at many factories workmen may be well supplied with water; and some means of personal coercion, if necessary, might well be employed, to prevent unclean vagrants carrying and spreading infection among their race. They do incalculably more mischief than scabby sheep.

II.—Diathetic Diseases.

This class is divided into two orders; at the head of the first is gout, at the head of the second scrofula. They are connected to some extent with the dietetic order of the first class: for gout is usually caused by luxurious living, and scrofula by defective dietary. But in other diseases of this class such as cancer and phthisis, the seeds of disease appear to be often inborn; and it is certainly impossible to trace, at present, their origin to external agencies. All these inquiries, however, are still in their infancy. Gout is, like syphilis, becoming more fatal; the deaths registered to its account are rapidly increasing and loudly proclaim the necessity of beginning at least some reform in the dinners and habits of the wealthier classes, if they would avoid not only the pangs of this painful disease, but its disorganizing ravages of their vital organs. Refined gluttony is as fatal as intoxicating drink. When will the culinary art be kept within its due limits, by simple elegant means please the taste, satisfy appetite, and sustain health? Who will take the lead in this cultivated temperance, and make an effort to put a stop to the annual sacrifice of so many precious lives? Women have hitherto, and we may hope, will still continue, to set men good examples; for the deaths of 352 men, and of but 96 women were referred to gout.

There is an increase of deaths ascribed to cancer, a decrease in the deaths by dropsy and by mortification.

Tubercular diseases are still heavy, but phthisis, hydrocephalus, and scrofula were less fatal than in former years.

III. Local Diseases

Diseases of nervous system.—The nervous system, especially in its brain development, plays so important a part in man, that its diseases in their intense forms put an end to life. The deaths under this head are 61,550; which, after deducting 26,015 by convulsions, including probably many vague undeveloped maladies, leave 35,535 referable severally to cephalitis, apoplexy, paralysis, insanity, chorea, epilepsy, and some other affections

of the brain, spinal marrow, nerves, and senses. The progress of Pathology reveals an organic change of the structure of the brain, which has only in these later years found a place in the tables: the deaths in the year by *necrencephalus*, or by softening, which is a sort of mortification of the brain, were 2135; of men 1317, of women 818. These organic changes of the organ of the mind are attended by functional derangements of various kinds, such as imbecility and paralysis of the nerves suppressing the muscular energy.

Diseases of the organs of circulation.—The blood plays so important a part in the individual life, that interference with the general current of its circulation from any cause is often fatal; under this head 24,899 deaths were classed. By pericarditis 676 deaths are said to have been caused; by aneurism 595. The great peculiarity in respect of aneurism is that 457 men and only 138 women died of it.

The influence of sex is felt at every age; but no children under 10 and no man or woman above the age of 85 died of aneurism in the year.

	10—	15—	25—	35—	45—	55—	65—	75—
Deaths by Aneurism—								
Of men - -	1	9	83	144	104	72	36	8
Of women - -	—	5	19	34	30	23	19	8
Excess of men -	1	4	64	110	74	49	17	—

This disparity may throw some light on the causes of aneurism, which has been associated by some observers with gout and syphilis.* The deaths referred to aneurism increased, and no effect of the improved methods of treatment by compression are apparent in the returns. Angina pectoris, syncope, and hypertrophy caused a considerable number of deaths in both sexes. To the newly discovered cause of death, *embolism*, the deaths of 27 males and 66 females were referred; only 2 males and one female were under 5 years of age; 46 of the women, 13 of the men, were of the ages 20–55; so that the excess in women is probably connected with the period of child-bearing. Previous to 1866 this cause of death was not returned separately; in 1866 the number was 18, which increased to 32, 28, and 93 respectively in the three following years 1867–9.

Diseases of respiratory organs. — The delicacy, the extent, and the exposure of these organs to atmospheric vicissitudes, as well as the vital importance of respiration, prepares us to expect to find them the seat of many fatal diseases; and in fact the deaths under this head amount to 80,397, including 43,180 males and 37,217 females of all ages. Young children under the age of 5 years are the greatest sufferers from pneumonia, and people of 65 and upwards from bronchitis, which is the greatest enemy they have to encounter. They die of the disease especially when the temperature falls below the freezing point of water. Phthisis predominates in the earlier periods of manhood. The mortality from bronchitis has gradually risen since the year 1852, from 1·0 in 1000 living to 1·7, and in the year 1869 it became 2·0. Pneumonia and phthisis grew a little less fatal; but not to an extent to compensate for the increase of bronchitis. It is probable that the dust and smoke in the air of cities and workshops irritates irreparably the living member of the air tubes, and thus lays the foundation of bronchitis in the chronic form. Could not manufactories and kitchens largely consume their

* *See* Science and Practice of Medicine, by W. Aitken, M.D., 3rd ed., vol. II., *pp.* 721–2.

own smoke, and thus diminish the smoke nuisance, which begrimes the faces of the people, their clothes, and their furniture?

Diseases of digestive organs.—The death-toll paid in these diseases is very constant. The deaths by rare diseases, such as hernia, ileus, and intussusception, showing little variation. Liver disease increased.

Diseases of urinary organs.—Not only nephria (Bright's disease) but nephritis became a more frequent entry on the death register; so the annual death-rate rose in 17 years from 191 to 337 deaths in a *million* living.

Diabetes is rare in childhood, but it is a mistake to suppose that it never occurs; and it is twice as fatal in men as it is in women. The deaths in the year 1869 show this.

Diseases of reproductive system.—Sixty-five deaths only occurred in men, 1218 in women; ovarian dropsy killed 234, notwithstanding the bold new operation, which has been practised successfully in so many cases. At the hospitals it may everywhere now be brought home to the poor women who suffer. The disease is probably one that is too long concealed by the patient, while the operation is too long deferred by the surgeon; within the last five years an encouraging diminution in its fatality has been observed.

The organs of locomotion are not often affected by spontaneous fatal diseases; they suffer more from injuries.

The integumentary system is the seat of many troublesome but of few fatal affections. Of the deaths here registered, it is worthy of note, that 355 were caused by pyæmia. Eczema is now the most fatal of the skin diseases.

IV.—Developmental Diseases.

The reproduction and growth of the human race are interrupted in various ways, and the interruption proves fatal in a certain number of cases. The first order of fatal causes concerns children: Still-born children are not registered; but many of the infants that are born before term are born alive, and some survive. In the year, 8666 children born alive prematurely died, and are so returned, without any reference to any specific disease; 1454 deaths are referred to malformations. The teeth are cut with pain and difficulty; and in weakly children the consequent irritation is sometimes fatal; but it is probable that some of the 4083 deaths referred to teething are due to latent causes at work during the period of teething.

Of women, 122 are stated to have died of paramenia; while 2102 died of childbirth, exclusive of 1181 who died of metria, sometimes called puerperal fever.

The mortality, calculated by comparing the deaths from childbirth with the population, was lower in 1869 than the average; but metria showed no decline.

The question of the mortality of mothers in child-bearing is of the highest importance, and it is further illustrated by the series of Tables 14, 15, 16 (pp. 235–7). On comparing the annual deaths of mothers to children born alive it will be noted that the deaths of mothers averaged 49 to 10,000 children born alive in the 23 years 1847–69; the highest proportion, 61, was in the year 1848, the lowest, 42, in the last year of the series; thus it rose 12 above the average, and fell 9 below it. The range above the average exceeds the range below. This is a characteristic of death by epidemic disease.

Deaths of child-bearing women are sometimes caused by diseases, such as small-pox, under which heads they are then classed.

This subject is now undergoing investigation by a most competent inquirer, and the issue will lead to the diminution of this fatality, the most deplorable of all that happens to us. Senility has its special diseases; but of old age 27,932 persons are said to have died.

V.—Violent Deaths.

16,497 deaths are referred to several evident causes which it has been usual to classify as violent. The proportion to population is much what it was in the year 1852; but it is much lower than it was some years ago, when the forces at man's disposal, employed recklessly, raised the number of deaths by violence every year, until in the year 1865 they attained the high pitch of 835 to a million living.

To the deaths by burning I have every year called attention, as the number can be controlled to a considerable extent, and the number of victims of fire has been lessened; the deaths by burning and scalds were 3166 in the year 1860 and 2545 in the year 1869. Still further reductions in these deaths may be made, and are required.*

Railways and mines are still the causes of many deaths which may be prevented.

I have the honour to be,
Sir,
Your obedient servant,
WILLIAM FARR.

To
The Registrar General.

---

* Note.—Subjoined are the suggestions for preventing death by fire, which I reprint from the letter in your 24th report, published in 1863:—

"1. *Open fires*, lights, and kettles of hot water should be surrounded by good guards. This precaution is of capital importance.

"2. Children and young people, and old women, should be systematically taught the danger of fire.

"3. The dresses of young children and old women should be made as much as possible of worsted or wool; which will protect them against cold, as well as against fire.

"4. The muslin dresses, and cotton and linen clothes, might very properly be starched with the chemical materials which are found by experience to render them, to a certain extent, incombustible.

"5. Private houses should all be provided on each floor of the sleeping apartments with the means of escape, in the event of the lower apartments taking fire during the night. Especial provision to be made for women and children.

"6. Fireworks, powderworks, and chemical manufactories require special precautions.

"7. Persons falling asleep near the fire, or near lights, in a state of intoxication, or in fits, are frequently burnt to death.

"8. Young children drink scalding water out of the spout of the tea kettle, or fall into scalding water. This happens often in the lower classes, when the mother is out at work, and the young children are left at home alone. The means of obviating this danger are evident.

"9. Special arrangements are, it is scarcely necessary to add, required for preventing the explosions of mines or of steam engines."

TABLE 1.—**Deaths** in **England** from **Scarlet Fever, Cynanche Maligna,** and **Diphtheria,** for each of the **Years 1855** to **1869.***

YEARS.	TOTAL.	SCARLET FEVER.	CYNANCHE MALIGNA, and DIPHTHERIA.	CYNANCHE MALIGNA.	DIPHTHERIA.

† Order 2, comprising Violent Deaths in Battle is inapplicable to the civil population.

‡ The number of persons executed in the several years will not necessarily correspond with that in the same years of the "Criminal Returns," inasmuch as the executions recorded in each year in the latter are derived from the dates of conviction, while the numbers in this Table are classed under the years in which the deaths are registered.

§ The cases of angina membranacea which would now be put to diphtheria were formerly classed under the same head as scarlet fever, but were distinguished in the notes.

TABLE 9.—**Causes of Death** registered in **England** in each of the **Ten Years 1860-1869**—*continued.*

† In the years 1852-57 cases of so-called "debility" and "premature birth" were classed together; when the new classification was introduced "premature birth" was kept apart, and "debility" and "atrophy" were thrown into one line.
‡ For the years 1858-69 the number of deaths in which the cause was not specified has been distributed pro rata over all the causes in the Table.

TABLE **11.—Causes of Death in England in 1869.** Proportional Numbers dying from each Class of Causes, and from each Cause.

* The Mean Annual Mortality in the 15 years from All Causes and from Specified Causes is the mean of the three quinquennial periods, and does not correspond exactly with the totals of the Orders and Classes; because under certain heads, for example, *Homicide*, *Suicide*, and *Causes not specified*, &c., the complete details cannot be given for the entire period.

† Mean of 3 years.

‡ Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population.

§ Mean of 2 years.

NOTE.—In a certain number of cases in each year the cause of death was not stated. In calculating the proportional numbers, since 1855, they have been distributed pro ratâ over all the causes in the Table.

TABLE 12.—**Mean Annual Rate** of **Mortality** in **England** from each CLASS of CAUSES and from each CAUSE during **Three Periods** of **Five Years**; and **Rate** of **Mortality** in the Year **1869**—*continued.*

* This death was registered on 19th January 1866.

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report, the numbers running consecutively from 1 to 623.* In forming the alphabetical arrangement the principle is adopted of placing compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A, as Ashford, East.]

For names of Towns, such as Chester, Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 243) *and "Index of certain Towns"* (page 253).

A

Aberayron, 596.
Abergavenny, 578 *a*.
Aberystwith, 597.
Abingdon, 123.
Alcester, 405.
Alderbury, 263.
Alnwick, 559.
Alresford, 113.
Alston, 564.
Alton, 114.
Altrincham, 454.
Alverstoke, 97.
Amersham, 148.
Amesbury, 262.
Ampthill, 181.
Andover, 118.
Anglesey, 623.
Ashborne, 447.
Ashby-de-la-Zouch, 414.
Ashton-under-Lyne, 474.
Askrigg, 537.
Aston, 395.
Atcham, 359.
Atherstone, 397.
Auckland, 542.
Axbridge, 324.
Axminster, 279.
Aylesbury, 151.
Aylsham, 232.

B

Bakewell, 449.
Bala, 616.
Banbury, 163.
Bangor, 621.
Barnet, 136.
Barnsley, 505.
Barnstaple, 295.
Barrow-upon-Soar, 416.
Barton-upon-Irwell, 470.
Basford, 438.
Basingstoke, 116.
Bath, 326.
Battle, 77.
Beaminster, 277.
Bedale, 535.
Bedford, 179.
Bedminster, 328.
Bedwelty, 578 *b*.
Belford, 560.
Bellingham, 557.
Belper, 446.
Berkhampstead, 147.
Bermondsey, 28.
Berwick, 561.
Bethnal Green, 21.
Beverley, 518.
Bicester, 159.
Bideford, 297.
Biggleswade, 180.
Billericay, 199.
Billesdon, 410.
Bingham, 443.
Birkenhead, 460 *b*.
Birmingham, 394.
Bishop Stortford, 139.
Blaby, 411.
Blackburn, 480.
Blandford, 270.
Blean, 66.
Blofield, 237.
Blything, 225.
Bodmin, 304.
Bolton, 468.
Bootle, 572.
Bosmere, 220.
Boston, 425.
Bourn, 422.
Brackley, 164.
Bradfield, 126.
Bradford-on-Avon, 258.
Bradford (Yorkshire), 499.
Braintree, 208.
Bramham, 514 *b*.
Bramley, 500 *d*.
Brampton, 566.
Brecknock, 600.
Brentford, 134.
Bridge, 64.
Bridgend, 583.
Bridgnorth, 356.
Bridgwater, 316.
Bridlington, 524.
Bridport, 278.
Brighton, 85.
Bristol, 329.
Brixworth, 170.
Bromley, 49.
Bromsgrove, 392.
Bromyard, 350.
Buckingham, 154.
Builth, 599.
Burnley, 478.
Burton-upon-Trent, 375.
Bury, 469.
Bury St. Edmunds, 215.

C

Caistor, 432.
Calne, 254.
Camberwell, 33.
Cambridge, 187.
Camelford, 300.
Canterbury, 65.
Cardiff, 581 *a*.
Cardigan, 593.
Carlisle, 568.
Carmarthen, 589.
Carnarvon, 620.
Castle Ward, 554.
Catherington, 111.
Caxton, 185.
Chapel-en-le-Frith, 450.
Chard, 318.
Cheadle, 373.
Chelmsford, 200.
Chelsea, 2.
Cheltenham, 344.
Chepstow, 576.
Chertsey, 38.
Chesterfield, 448.
Chester-le-Street, 548.
Chesterton, 186.
Chichester, 92.
Chippenham, 253.
Chipping Norton, 162.
Chipping Sodbury, 331.
Chorley, 481.
Chorlton, 471.
Christchurch, 101.
Church Stretton, 354.
Cirencester, 340.
Cleobury Mortimer, 355.
Clifton, 330.
Clitheroe, 479.

* Thus, the number of Marriages in the Aberayron District may at once be ascertained by referring, in the "*Abstract of Marriages*," to the District numbered 596 (see page 24); and in like manner the number of Births and Deaths, of Deaths at different Ages, &c. will be found by referring to the same district number in the appropriate Tables.

Clun, 353.
Clutton, 325.
Cockermouth, 570.
Colchester, 204.
Congleton, 457.
Conway, 622.
Cookham, 129.
Corwen, 615.
Cosford, 213.
Coventry, 400.
Cranbrook, 60.
Crediton, 292.
Crickhowell, 601.
Cricklade, 251.
Croydon, 46.
Cuckfield, 83.

D

Darlington, 540.
Dartford, 50.
Daventry, 169.
Depwade, 239.
Derby, 445.
Devizes, 256.
Dewsbury, 502.
Docking, 244.
Dolgelly, 617.
Doncaster, 510.
Dorchester, 275.
Dorking, 43.
Dover, 72.
Downham, 247.
Driffield, 523.
Droitwich, 391.

INDEX OF SUB-DISTRICTS.

[In this alphabetical arrangement the principle is adopted of placing the Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G as "Grinstead, East;" St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to the order in which it appears in the arrangement of the Districts in the Tables of Abstracts; thus, Abbey Holme (569; 2) is the 2d Sub-District of the Wigton District, No. 569.]

Sub-District.	District.	No.
A		
Abbey	Bath	326; 3
Abbey Holme	Wigton	569; 2
Abbots Bromley	Uttoxeter	374; 2
Abbotsbury	Weymouth	274; 4

TO

REGISTRAR-GENERAL'S THIRTY-SECOND ANNUAL REPORT AND APPENDIX.

		PAGE
AGES;	of Persons married in 1869	xiii
	Mean Age at Marriage	xiii
	Deaths of Males and Females registered at different Ages in England in each of the Years 1838–69. (Tables 16, 17.)	xxi–xxii
	Mortality of Males and Females at different Ages in England in the Years 1838–67. (Tables 18–21.)	xxiii–xxvi
	of 243,362 Persons married in 1869, distinguishing Bachelors, Spinsters, Widowers, Widows	26–27
	at Death of Males and Females registered in 1869 in Divisions, Counties, and Districts	96–117
	at Death of Males and Females in England registered from different Causes, in 1869	118–123
	at Death of Males and Females in England registered from different Supplemental Causes, in 1869	124–127
	at Death of Males and Females in London registered from different Causes, in 1869	128–133
AREA in Statute Acres of each Division, County, District, and Sub-district		28–82
ARMY;	Strength and Mortality in the Army at home and abroad	xxxiii
	Annual Rate of Mortality per 1000 in Great Britain, England, France, Austria, and Italy, including the Deaths of Soldiers *at Home and Abroad*, 1857–69. (Table 31.)	xxxii
	Average Strength of the British Army at Home in 1869. (Table 32.)	xxxiii
	Mortality of the Army at Home in 1869. (Table 33.)	xxxiii
	Average Strength of the British Army Abroad in each of the Years 1866–69. (Table 34.)	xxxiv
	Number of Deaths in the British Army at Home and Abroad, 1866–69. (Table 35.)	xxxiv
	Annual Rate of Mortality per 1000 amongst Officers and Men in the Army Abroad, 1858–69. (Table 36.)	xxxiv
	Strength at Home and Abroad in 1861, showing the Numbers born in the different parts of the United Kingdom and elsewhere. (Table 37.)	xxxv
	Deaths in Army Abroad of Officers and Men belonging to England and Wales and to Great Britain, 1858–69. (Table 38.)	xxxv
AUSTRIA;	Estimated Population in middle of the Years 1853–69. (Table 27.)	xxx
	Number, and Proportion per 1000 to Population, of Marriages, Births, and Deaths, in each of the Years 1853–69. (Table 28.)	xxxi
	Annual Rate of Mortality per 1000 in the Austrian Army, 1857–69. (Table 39.)	xxxv

PAGE

BIRTHS registered in England, in each Year, 1838–1869. (Table 1.) . v
proportion to Population in each Year, 1838–69. (Table 2.) . vi
Legitimate and Illegitimate in England in the Years 1845–69, and Proportion of Males to Females. (Table 8.) . . . xiv
in Counties, in 1869. Numbers, Legitimate and Illegitimate, of the two Sexes; Proportions of Male to Female Births, Legitimate and Illegitimate; Proportion of Illegitimate Births to Total Births. (Table 9.) xv
in 1869 xiii
proportion of Male and Female Children born in the several Counties of England during each of the Years 1860–69. (Table 10.) xvi
proportion to Population in Counties for each of the Years 1859–69. (Table 11.) xvii
of the two Sexes xiv
proportional Number of Births in each Quarter to 1,000 Births in the average Quarter, 1838–69. (Table 13.) xviii
registered in England, and proportion to Population, in each Quarter of the Years 1838–69. (Table 12.) xviii
in the four Seasons xiv
out of wedlock . . . . . xiv–xvii
in quarter ending March 1869 . . . . . xxxix–xl
in quarter ending June „ xliii
in quarter ending September „ xlvii
in quarter ending December „ li
registered in each of the Divisions, Counties, Districts, and Sub-districts in 1869 28–82
excess over Deaths in each of the Divisions, Counties, Districts, and Sub-districts in 1869 28–82
registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters of 1869 . . . 84–87
of Children born out of Wedlock registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters of 1869 88–91

BIRTH-RATE in Counties in each of the Years 1859–69. (Table 11.) . xvii
in England in each Quarter of the Years 1838–69. (Table 12.) . xviii

BURNS AND SCALDS; Deaths and Mortality at different Ages, in the Years 1848–69. (Table 18.—App.) 237

CAUSES of DEATH of Males and Females in England, at different Periods of Life, in 1869 118–123
(Supplementary Table) of Males and Females in England at different Periods of Life, in 1869 124–127
of Males and Females in London at different Periods of Life, in 1869 128–133
of Males and Females in England, and in each of the Divisions and Counties, in 1869 134–157
(from certain zymotic and other Causes) in 1869, in the Divisions, Counties, and Districts of England 158–169
Dr. Farr's Letter to the Registrar General thereon 215–220
registered in England in each of the Ten Years 1860–69. (Table 9.—App.) 225–227
Mortality from the several Causes in each of the Years 1852–69. (Table 10.—App.) 228–230

CAUSES of DEATH—*continued.* PAGE

proportional Numbers dying from each Cause in 1869. (Table 11.—App.) 231

Mean Annual Rate of Mortality from different Causes during three periods of Five Years, and in 1869. (Table 12.—App.) . 232–233

in England, in 1869, arranged in the order of their fatality. (Table 13.—App.) 234

CHILDBIRTH; fatal diseases of 219

Deaths in 1869, at different Ages, of Women after Childbearing, classed under different Diseases, and neither referred to Childbirth nor to Metria in the Abstracts. (Table 14.—App.) . 235

Deaths of Women in 1869 who were returned as pregnant, classed under certain Diseases. (Table 15.—App.) . . . 236

Deaths of Women from Metria and Childbirth in the 23 Years, 1847–69, and proportional Deaths of Mothers to Children born alive. (Table 16.—App.) 236

CYNANCHE MALIGNA and DIPHTHERIA; Deaths in England at different Ages in each of the Years, 1855–69. (Tables 1. and 2.—App.) . 221

DEATHS registered in England in each Year, 1838–1869. (Table 1.) . . v

proportion to Population in each Year, 1838–69. (Table 2.) . vi

in 1869 xix

registered in England at different ages (Males and Females) in the 32 years 1838–69. (Tables 16, 17.) . . . . . xxi–xxii

registered in England in each Quarter of the Years 1838–69. (Table 22.) xxvii

proportion to Population xix

Meteorology and Mortality . . . . . xix–xx

in the four Seasons xxi

of the two Sexes xxi

Mortality in different localities . . . . . xxii–xxiii

Mortality in the Eleven large Towns xxiii

Mortality at different Ages of Males and Females . . . . xxiv–xxv

proportional Number in each Quarter to 1,000 Deaths in the average Quarter, 1838–69. (Table 23.) xxvii

registered in each of the Divisions, Counties, Districts, and Sub-districts in 1869 28–82

registered in each of the Four Quarters of 1869 (distinguishing Males and Females), in Divisions and Counties 92–95

of Males and Females at different Ages registered in 1869 in Divisions, Counties, and Districts 96–117

in 1869 in the principal Public Institutions 195–212

DEATHS FROM DIFFERENT CAUSES. (*See* CAUSES OF DEATH.)

DEATHS FROM VIOLENCE. (*See* VIOLENT DEATHS.)

REPORT

TO

The Right Honourable GEORGE SCLATER-BOOTH, M.P., President of the Local Government Board, &c. &c.

General Register Office, Somerset House, 7th July 1874.

(1872.)

SIR,

I HAVE the honour to submit to you my Report on the Registration of Marriages, Births, and Deaths for the year 1872.

The registers have all been carefully examined and revised at this office, and I am now able to report very accurately the numbers of marriages, births, and deaths registered during the year. The marriages and the births exceed the numbers recorded in any previous year; and, after allowing for increase of population, their rates are considerably above the average. The rate of mortality was below the average.

As for legal as well as statistical purposes, it is important that these three facts in the life of the people should be all authentically registered, I propose to state here to what extent, in my belief, that result is achieved; and to what causes any existing imperfection is due. All the marriages, since the date of Lord Hardwick's Act,* have been registered in England; and there is no reason to believe that the registers of the last year were incomplete. Not so the births. The Act of 1836† lays it down in clause 19, that the parent of a child, or the occupier of the house in which a child was born, "MAY *within forty days give notice of the birth to the Registrar*"; and in clause 20 enacts, that the parent or occupier shall give the required information, *on being requested so to do by the Registrar*. It was not enacted that the persons who best know shall give the information; and there is no punishment for the neglect; no penalty for refusal. Any one who has administrative experience will see the difficulty of working such an enactment. How can a Registrar who is paid a shilling a case for every birth registered ascertain the occurrence of every birth, legitimate or illegitimate, in every house, in every street of London? In other large towns, or in wide districts, the Registrars encounter similar, or equal difficulties. I have urged the Registrars, through my Inspectors, to adopt the most effective means for getting information from all sources, and it is gratifying to me to state that through their exertions, with the assistance of the enlightened part of the public, the number of births that escape registration has constantly declined. The precise extent of the deficiency cannot be determined; but I am disposed to believe that the annual deficiency in the last ten years does not exceed the estimate in the last Census Report,‡ and that was 13,614 out of 763,623. The probable annual deficiency in the ten years 1841–50 was 38,036, in the next ten years 19,323, and in the last ten years, as has been already shown, 13,614. The deficiency thus rapidly declined: calculated on 1000 births occurring, it was in the three decades, 65 in the first, 29 in the second, and 18 in the third. I have no hope of effecting the

* 26 Geo. 2. c. 33.—1753. † 6 & 7 Will. 4. c. 86, clauses 19, 20.
‡ Vol. 4. Appendix A., p. 55.

registration of all the births until the Legislature arms me with the power of carrying out the intentions of the Act under the pressure of a penalty clause, which in practice would rarely or ever after the first year have to be enforced. If every parent of a child were directed to give early information of its birth to the Registrar, and subjected to a penalty for neglecting this duty to the child and to the State, I confidently believe that few births would escape registration. The record would be complete; the missing links in pedigrees would be reduced to a minimum; children would be under the protection of the law, and they would no longer be under the many disadvantages arising from inability to prove their age and parentage, by a birth certificate.

I have reason to believe that a certain number of children born alive are buried as stillborn, and that of deaths buried without a Registrar's certificate a few are never registered. The officiating clergyman is bound in every such case to give notice of the burial to the Registrar of the sub-district in which the death occurred; but this is not, for various causes, invariably done.

The causes of death are certified on forms which I supply, in the great majority of cases by the medical attendants of the deceased or by the coroners; but I ascertained in the year 1871 that in about 8 per cent. of the deaths the cause was not certified by a qualified practitioner. A certain small number of medical practitioners refuse to fill up the certificates for various reasons; in about 2 per cent. of the cases there was no medical attendant; and in the residue of the cases the sick children and adults were attended by chemists and druggists, by herbalists, by bonesetters, by quacks, and by various orders, of unqualified people. In a considerable number of sub-districts every death is certified; in a few sub-districts, especially of Wales and Cornwall, the certificates fall to a very low proportion.

I am of opinion that the grant of the certificate, which is now voluntarily given by the great majority of practitioners, should be rendered compulsory to meet the exceptional cases, and that some means should be adopted to secure the best returns of the cause of death procurable in every case. While asking power to meet exceptional cases I feel bound to express my thanks to the College of Physicians and to the medical profession generally for their friendly co-operation in carrying out the Act.

Increase of Population.—From the rate of increase observed in the thirty years 1841–71, the population of England and Wales enumerated on 3d April 1871 is estimated—by the middle of 1872—to have increased to 23,067,835.

The estimated population at the middle of 1871 was 22,782,812, so the estimated increase from the middle of 1871 to the middle of 1872 was 285,023.

The *natural* increase of population as represented by the excess of births over deaths, in the year ending 31st December 1872, was 333,642; but this number will always be in excess of the *actual* increase of population owing to the outflow by emigration.

295,213 emigrants left the ports of the United Kingdom, at which there are Government Emigration Officers, in the year 1872, including 120,780 English, 19,918 Scotch, 73,959 Irish, and 80,556 Foreigners. 5,696 emigrants whose birthplaces were not stated are proportionally distributed in this statement. Deducting the English emigrants from the *natural* increase of population, a balance of 212,862 remains to which a certain proportion of emigrants from Scotland, Ireland, and other parts must be added in order to obtain the *true* increase of population.

It had not been observed before that great numbers of the emigrants to the colonies, and to the United States return to England until this was proved in the Census report of 1871. The numbers of returning emi-

grants in the ten years 1861–70 were estimated at 251,984. Upon inquiry after this estimate was made, the fact that great numbers returned to England was proved by information in the possession of the Emigration Commissioners. Something of the same kind was going on in 1872 but probably not to the same extent.

The emigration Reports show that there has been a large increase in the number of *English* emigrants during the last four years, as will be seen by reference to the annexed Table showing the nationality of the emigrants from the United Kingdom during the last ten years :—

Years.	English.	Scotch.	Irish.	Foreigners.	Not distinguished.	Total.
1863	61,243	15,230	116,391	7,833	23,061	223,758
1864	56,618	15,035	115,428	16,942	4,877	208,900
1865	61,345	12,870	100,676	28,619	6,291	209,801
1866	58,856	12,307	98,890	26,691	8,138	204,882
1867	55,494	12,866	88,622	31,193	7,778	195,953
1868	58,268	14,954	64,965	51,956	6,182	196,325
1869	90,416	22,559	73,325	65,752	5,975	258,027
1870	105,293	22,935	74,283	48,396	6,033	256,940
1871	102,452	19,232	71,067	53,246	6,438	252,435
1872	118,190	19,541	72,763	79,023	5,696	295,213
Total in 10 Years	768,175	167,529	876,410	409,651	80,469	2,302,234

In proportion to population the number of Irish emigrants is greater than the English or Scotch, but it is worthy of notice that previous to 1869 the *absolute* number of Irish emigrants had exceeded the English, whereas, in each of the years 1869–72 the reverse was the case.

The number of Foreign emigrants—chiefly Germans, Norwegians, and Swedes, passing through this country on their way to the United States and to British North America, has rapidly increased ; in 1864 they numbered 17,347, whereas in 1872 they amounted to 80,556, or 27 per cent. of the total number of emigrants who left the Ports of the United Kingdom at which there are Emigration Officers. The war between Germany and France appears to have affected the numbers in 1870.

Meteorology.—The most remarkable feature of the year 1872 was the excessive rain-fall. The land during the last three months of the year was for a time thoroughly washed and purified, and this almost unprecedented fall of rain has in many ways been most beneficial. The mortality was sensibly less than in the two previous years of severe and partial drought. The total fall of rain was enormous, and each of the last three months showed an excess. During the quarter rain had fallen at Greenwich on 67 days, a greater number than had been previously experienced as far back as the year 1815. The total fall in the 67 days amounted to 11·32 inches. The previous instances of large falls at Greenwich were as follows :—

Year.	Amount fallen.			Total Fall in the Quarter.	Number of Days of Rain in			The Quarter.
	Oct.	Nov.	Dec.		Oct.	Nov.	Dec.	
	in.	in.	in.	in.				
1821	2·42	4·33	4·72	11·47	11	20	19	50
1822	3·60	3·66	2·26	9·52	12	16	6	34
1824	2·44	3·88	3·55	9·87	12	14	17	43
1831	3·65	2·70	3·47	9·82	19	15	19	53
1832	4·41	4·48	2·08	10·97	16	15	16	47
1833	2·87	2·51	4·95	10·33	13	11	27	51
1841	5·84	2·75	1·92	10·51	22	13	18	53
1844	4·01	4·74	0·34	9·09	15	13	6	34
1852	3·75	5·66	1·72	11·13	15	22	19	56
1865	5·90	2·39	0·87	9·16	19	18	10	47
1868	2·59	1·16	5·45	9·20	13	12	23	48
1872	4·33	2·92	4·07	11·32	22	24	21	67

It has been shown* that an inch deep of rain weighs nearly 101 tons per acre. For every 100th of an inch, therefore, upwards of a ton of water falls. The rain-fall registered at Greenwich was 11·32 inches, so that upwards of 1100 tons of water fell in the last three months of the year on each of the 37,000,000 acres of England and Wales. It is known that the rain-fall in the greater part of England exceeds the amount registered by the Astronomer Royal; so that this is the minimum quantity that fell. The rain-fall of the year at Greenwich was 30 inches.

The mean temperature of the year at the Royal Observatory, Greenwich, was mild, being 50°·7, or 1°·3 above the average. The meteorology of the year is ably described by Mr. Glaisher, F.R.S., in his remarks on pp. lvii–lix. See also Tables, pp. xcviii–ci.

Prices.—Owing to the frequent fluctuations and severity of the weather throughout the concluding months of the year 1871, and to the heavy rains in the autumn of 1872, which damaged the cereal crops, the yield of the harvest of 1872 was below the average. The weather was also more unfavourable to the potato plant than in any year since 1846–8, and the crop largely failed: the wholesale price of potatoes, which was 77*s.* per ton in 1871, rose to 131*s.* 6*d.* per ton in 1872, representing an increase of 71 per cent.

The official returns show an increase in the number of cattle and sheep, but the foot and mouth disease, and pleuro-pneumonia were unprecedentedly virulent in all parts of the country, and rinderpest broke out in the autumn. Towards the close of the year, however, there was an abatement of these diseases, attributed by some authorities to measures of repression, and by others to the beneficial action of the excessive rain-fall on the soil and atmosphere.

There was a great advance in the price of butchers meat in the three years 1869–71, and in 1872 it was still very high. Beef, as sold by the carcase at the Metropolitan meat market, ranged from 5¼*d.* per lb. for inferior quality to 7¾*d.* for superior quality. Mutton was from 6*d.* per lb. for inferior quality to 8¾*d.* for superior quality. Beef was at the same price as in 1871, but mutton was dearer, indeed, the price of mutton of superior quality was exorbitant, for it was 8¾*d.* per lb.

In the five years 1852–56 the average price of beef was about 5¼*d.* per lb., of mutton 5½*d.* per lb. In the five years 1868–72, both beef and mutton were 1*d.* per lb. dearer, representing an increase in the price of the former of 19 per cent., and of the latter of 18 per cent.

The great increase in the supply of gold during the last quarter of a century has resulted in its depreciation, or in other words, in a general rise in prices. The changes that have been brought about by the somewhat rapid rise in prices and wages in 1872 is one of the most remarkable events of the year. The connection of these economic phenomena with the annual numbers of marriages and births, and with the public health, must be carefully observed.

Pauperism.—The effects of general prosperity and abundant employment are visible in the returns of pauperism for the year. The report of the Local Government Board shows a material decrease in the pauperism of the country. From a return showing the number of paupers—exclusive of lunatics in Asylums and vagrants—it appears that on the last day of the last week in 1871 there were 930,902 paupers including 150,093 in-door, whereas on the corresponding day of 1872 there were only 838,636 paupers, including 147,657 in-door, showing a decrease of 92,266, or 9·9 per cent. in 1872.

The average number of paupers receiving relief on the last day of each week amounted to 137,278 in-door, and 714,970 out-door, against 143,605 in-door, and 803,797 out-door in the previous year.

* See Registrar General's Weekly Return, No. 5, 1865.

Marriages.

The year 1872 is remarkable as a year of defective harvest, cattle-plague, excessive rain-fall, rise in the price of coal and iron, and rise in the prices and wages of labour. The price of wheat was high, viz., 57*s.* 1*d.* per quarter, the average price in the ten years 1862–71 being 51*s.* 2*d.* per quarter; and there was a general rise in the price of various commodities, but as a set-off against the general and rapid rise of prices, the working classes found full employment at good wages, and, confirmatory of previous experience, the prosperity of the people expressed itself in an increased marriage-rate. The country, therefore, may now be said to have recovered from that commercial depression which began in 1866–7, and which had the effect, as shown in the annexed figures, of depressing the marriage-rate, more or less, in each of the five years 1867–71:

Years.	Persons married to 1000 persons living.
1866	17·5
1867	16·5
1868	16·1
1869	15·9
1870	16·1
1871	16·7
1872	17·5

In the year 1872, 201,267 marriages were celebrated, so 402,534 persons were married, a number considerably in excess of those in any previous year, and 22,310 more than in 1871. The marriage-rate (persons married to 1000 population) was 17·5, or 1·0 above the mean of the last thirty-five years, and 0·8 above the rate in 1871.

Comparing the marriages in 1872 with the mean number in the ten years 1862–71, the increase, in proportion to population, is found to be greatest in the manufacturing counties, and in the counties where the iron and coal districts abound. Thus the mean rate in the ten years and the rate in 1872, respectively, in each of the undermentioned counties was as follows:—Northampton 14·7 and 17·5, Stafford 16·9 and 19·5, Warwick 16·2 and 18·4, Nottingham 16·4 and 19·8, Derby 15·5 and 17·0, Chester 16·0 and 17·0, Durham 17·1 and 19·7, Northumberland 18·9 and 21·0, Monmouth 17·1 and 20·4, Cumberland 15·1 and 16·8, Westmorland 13·6 and 14·4, Lancaster 18·8 and 20·6, South Wales 16·1 and 17·8. In the counties of Kent (extra-metropolitan), Sussex, Wilts, Dorset, and Hereford, the rates exhibit a striking decrease.

Forms of Marriage.—Of the 201,267 marriages, 152,364, or 76 per cent., were solemnized according to the rites of the Established Church, and 48,903, or 24 per cent., were performed *not according* to its rites. In the five years 1841–45, as shown in my last Report, the proportions were 92 and 8 per cent. respectively. This decrease in the numbers married according to the rites of the Established Church is chiefly accounted for by the large and increasing number who avail themselves of the form of marriage at the Superintendent Registrars' Offices without religious rites.

In August 1836, by the Act 6 & 7 William 4. c. 85, it was enacted that all places of religious worship "may be registered for solemnizing marriages therein," and by the end of the next year (1837) 946 buildings were registered for this purpose, 396 in the following year, 221 in 1839, and 181 in 1840, until in the year 1855 (when only 98 buildings were registered) the number on the register amounted to 3658.

In July 1855, by the Act 18 & 19 Vict. c. 81, entitled An Act to amend the law concerning the certifying and registering of places of religious worship in England, it was enacted that "all places of religious worship, "not being churches or chapels of the Established Church, should, if the "congregation should desire but not otherwise, be certified to the Registrar "General."

Many places were in consequence certified for public worship, which is a necessary preliminary to registration for the solemnization of marriages. The passing of this Act appears to have led to a striking increase in the number of buildings annually registered for the solemnization of marriage, as is seen in the following table :—

Years ending 31st Dec.	Number Registered less Cancellations each Year.	Number on the Register each Year.	Years ending 31st Dec.	Number Registered less Cancellations each Year.	Number on the Register each Year.
1837	946	946	1855	98	3658
1838	396	1342	1856	153	3811
1839	221	1563	1857	114	3925
1840	181	1744	1858	147	4072
1841	120	1864	1859	156	4228
1842	119	1983	1860	175	4403
1843	160	2143	1861	161	4564
1844	160	2303	1862	190	4754
1845	164	2467	1863	200	4954
1846	148	2615	1864	209	5163
1847	123	2738	1865	189	5352
1848	131	2869	1866	224	5576
1849	125	2994	1867	204	5780
1850	112	3106	1868	212	5992
1851	122	3228	1869	220	6212
1852	112	3340	1870	213	6425
1853	113	3453	1871	215	6640
1854	107	3560	1872	264	6904

Thus the number of places of worship where marriages can be solemnized —not connected with the Establishment—increased, and the number of marriages performed not according to the rites of the Established Church also increased proportionately.

Of 100 couples who married in 1872 according to the rites of the Church ·01 married by special licence, 11 by licence, 85 after banns, and 3 by Superintendent Registrar's certificate, while in nearly 1 per cent. the clergy omitted to state under which of the foregoing heads the marriages should be classed. Of 100 couples who married not according to the rites of the Church 17 were Roman Catholics, 41 were members of various Christian denominations, ·1 Quakers, ·9 Jews, and 41 were married at Superintendent Registrars' Offices.

Marriages according to Quaker rites are decreasing, and the numbers in the last five years were 73, 50, 48, 53, and 44. The marriages among

Jews have increased; the numbers in each of the last five years were 306, 336, 358, 396, and 428.

First Marriages; Re-marriages.—Of the 201,267 marriages in 1872, 164,589 were between bachelors and spinsters. 47,359 persons were married who had been previously wedded. Of the 27,534 widowers who re-married, 16,853 married spinsters, and 10,681 married widows; while of the 19,825 widows who re-married, 9,144 were espoused by bachelors, and 10,681 by widowers. Thus there is an evident tendency in widowers and widows to intermarry. Of every 100 men married in the year 1872 13·7, and of every 100 women 9·9, had been previously married.

The registers of marriage at the central office show that the number of marriages of divorced persons in 1872 was 58, viz., 56 in which one or other of the contracting parties is stated to have been previously divorced, and 2 in which divorced men married divorced women. Of 28 divorced men who re-married, 22 married spinsters, 4 married widows, and 2 married divorced women. Of 32 divorced women who re-married, 21 were married to bachelors, 9 were married to widowers, and 2 were married to divorced men.

The proportional number of *divorced persons* who re-married to every 10,000 persons married was ·61 in the four years 1861–4, 1·00 in the four years 1865–8, and 1·29 in the four years 1869–72.

Ages at Marriage.—The ages of the existing married and unmarried population combined with the ages at marriage furnish the means of determining several very important social questions, and the recent enumeration of the ages and conjugal condition of the people enabled us to show, in the report on the recent Census, that the probable duration of the joint lives of husband and wife in England and Wales was 27 years, and that the probable duration of the longest life was 48 years.†

The proportion of children to a marriage is, to a great extent, dependent on the age at which marriage is contracted, and the marriage registers of a nation furnish the means of determining this age. In England and Wales of 201,267 marriages registered in 1872 the ages of both parties were specified in 145,507 instances, about five sevenths of the total number. The mean age at marriage of these 145,507, including the re-married, was 27·9 years for men, and 25·7 years for women.

The proportion of young people who marry has never been so high as during the year under review, and the proportion has been gradually increasing since the commencement of registration. In 1851 in every 100 marriages 5·02 men and 15·75 women were under 21 years of age, while in 1872, 8·00 of the men and 22·32 of the women were minors, but this increasing tendency to early marriage has not affected the mean age at marriage to any appreciable extent, for while the mean age of bachelors in 1851 was 25·8 years, and of spinsters 24·6 years, the ages in 1872 were nearly the same, viz., 25·7 and 24·3 years.

By means of the Census returns relating to the ages and conjugal condition of the people, I am enabled to show the annual rate of marriage at each year of age under 21, in each of the three periods 1850–52, 1860–62, and 1870–72.

---

* The number of decrees of divorce pronounced by Her Majesty's Court for Divorce and Matrimonial Causes in the year 1872 was, nisi 107, absolute 133.

† See Census of England and Wales, Vol. IV. General Report, pp. xvii–xx, where it is also shown that the mean age of the married population being 41·85 years, and the mean age at marriage 26·70 years, the mean natural term of existing married life is rather more than the difference between these two results (15·15), viz., 17·63 years.

20 & under 21	5·298	4·693	5·298	10·590	8·333	10·584

The Table may be read thus:—In 1861 there were 1,121,155 Bachelors, 188 Widowers, (1,121,343 Unmarried Men,) 1,094,588 Spinsters, 671 Widows, (1,095,259 Unmarried Women,) aged 15 and under 21. The average annual numbers Married in the 3 years 1860–62, aged 15–21, were 10,601 Bachelors, 8 Widowers, (10,609 Men), 32,389 Spinsters, 50 Widows, (32,439 Women,) being in the proportion of ·946 Bachelors to every 100 living, 4·255 Widowers, (Men Married to every 100 Unmarried Men, ·946,) 2·959 Spinsters to every 100 living, 7·452 Widows. (Women Married to every 100 Unmarried Women, 2·962).

* The Population at the above Ages has been deduced from the graduated Tables showing the estimated numbers living at each year of age, published in each of the Census Reports of 1851, 1861, and 1871.

† In a certain number of cases the Age at Marriage is not returned; for example: the average annual number of Minors married in the 3 years 1870-72 was 14,888 Men and 41,978 Women, but an abstract of the instances in which the ages of both parties were stated only produced 13,681 Men and 35,732 Women; the ages of one or both of the couples married in the other cases being distinguished in the marriage registers by the terms "Minor," "Under Age," &c. The numbers of Men and Women whose ages were not stated have been proportionally distributed over the different periods of age.

To ascertain the increased disposition to early marriage more accurately the number of unmarried women living under 21 years of age at different periods must be taken into account. This has been done in Table A., and by dividing the average annual marriages of minors by the numbers unmarried at corresponding ages, the result shows that, among men under 21 years of age, marriage was contracted by 7·6 in 1000 living in 1850–52, by 9·5 in 1860–62, and by 11·8 in 1870–72; and that early alliances among women under 21 years of age were contracted by 24·3 in 1000 in 1850–52, by 29·6 in 1860–62, and by 34·1 in 1870–72.

There is therefore, beyond doubt, an increasing tendency to early marriage among the young people of this country.

The proportion which the population, including the army, navy, &c. abroad, at the ages 15 and under 21 bore to the population aged 15 and upwards at each of the three Censuses of 1851, 1861, and 1871 was 18·38, 17·93, and 17·90 per cent., respectively.

Widowers are more inclined to marry than bachelors. By the annexed Table B., showing the average annual rate of marriage in the three years 1870–72 at each of 14 periods of age, it will be observed that this disparity of disposition is most remarkable in old widowers and old bachelors. At ages 35–40, to every bachelor who married 4 widowers remarried; at ages 40–45, 5 widowers remarried to every bachelor who married. As age advances this disparity increases, and at ages 50–55 the relative proportions were 1 bachelor to 7 widowers; at 60–65, 1 bachelor to 8 widowers; and at 65–70, to every bachelor who married 8 widowers remarried. These are marriages out of equal numbers.

Widows also marry in higher proportions than spinsters, thus at ages 15–20, to every spinster who married 2 widows remarried; at ages 20–25 and 25–30 the disparity was not so great, but at ages 30–35, and up to 65, the relative proportions were about the same as at ages 15–20, for to every spinster who married 2 widows remarried.

NOTE.—Of the average annual number of marriages in the three years 1870-72, the ages of the males and females were stated only of the following numbers; viz., 118,671 bachelors, 123,424 spinsters, 17,183 widowers, and 12,430 widows. In this Table these numbers have been proportionally raised to the total numbers married under the respective classes.

Signature of Marriage Registers.—Now that so much progress has been made in meeting the educational wants of the country, the number of men and women who sign their names in the marriage register will be regarded with increasing interest.

Of the 201,267 marriages in 1872, 39,125 men, or 19·4 per cent., and 52,920 women, or 26·3 per cent., made marks in signing the marriage register, so that only 80·6 per cent. of the men, and 73·7 per cent. of the women who married wrote their names. These results show that out of every 100 marriages, 13·3 men, and 22·5 women, were able to write their names in excess of the numbers in 1841, 30 years previously. The disparity between the number of men and women able to write, though not so great as in former years, is still striking. The ability of the men to write has increased during the last 31 years at the rate of 20 per cent., while that of the women has increased 44 per cent.

The returns of future years will, it may be hoped, afford evidence of still more satisfactory progress, so that the great body of the people of England may no longer lag behind the people of Scotland in elementary education.

Turning to the report of the Registrar General for Scotland just published, relating to the abstracts of 1870, the advantages of the old Scotch system of education over that of England are still apparent. 90 per cent. of the men who married, and 80 per cent. of the women who married in Scotland, signed their names in writing, whereas in England and Wales in 1872 the proportions per cent. who signed in writing were 81 for men, and 74 for women.

The proportions in the different counties and districts show where educational efforts should be more particularly directed. In the counties containing the great centres of mining and manufacturing industries, the proportion of *women* unable to sign was very high; in Lancaster only 62·1 per cent. were able to write their names, in Bedford 64·0, North Wales 64·1, Durham 64·8, West Riding of York 66·2, Cornwall 69·7, Chester 70·1, Nottingham 70·1, Salop 70·6. In some parts little more than half of the *women* who married were able to write, the proportions per cent. being 57·4 in Stafford, 57·6 in Monmouth, and 54·3 in South Wales.

The counties where educational efforts for *men* claim most attention are Monmouth, where the proportion per cent. who signed in writing was 62·6, Stafford 64·0, Bedford 68·9, Hertford 70·2, Suffolk 70·9, South Wales 71·3, Norfolk 72·1, North Wales 72·5, Salop 72·6, Cambridge 73·4, Hereford 75·0, Cornwall 75·7, Hunts 76·2, Wilts 76·4, Bucks 77·1, Durham 77·1, Worcester 77·1, Dorset 77·9, Nottingham 78·1. In London the proportion for men was 91·2, for women 86·1.

Buildings registered for Marriages.—The number of these buildings registered in 1872 was 264, bringing up the total number on the register at the end of the year to 6904. Of the 264 registered during the year 3 belonged to Presbyterians, 38 to Independents, 42 to Baptists, 1 to the United Brethren or Moravians, 20 to Roman Catholics, 6 to Unitarians, 111 to the various sects of Wesleyan Methodists, 14 to Calvinistic Methodists, 1 to the Countess of Huntingdon's Connexion, 2 to the Catholic and Apostolic Church, and 26 to other places of worship. For the distribution of the 6904 buildings now on the register, under the various denominations, see Table 9.

Certified Places of Worship.—The number of places of meeting certified for religious worship during the year 1872 not being churches or chapels of the Established Church was 607. The number on the register on 31st December 1872 was 19,134. The following is a list of the various titles by which religious denominations have been certified to the Registrar General. The names printed in italics have been added since the publication of the list in the last Report.

Adventists.
Apostolics.
Armenian New Society.
Baptists.
Baptized Believers.
Believers in Christ.
Bible Christians.
Bible Defence Association.
Brethren.
Calvinists.
Calvinistic Baptists.
Catholic and Apostolic Church.
Christadelphians.
Christians who object to be otherwise designated.
Christian Believers.
Christian Brethren.
Christian Eliasites.
Christian Israelites.
Christian Mission.
Christian Teetotallers.
Christian Temperance Men.
Christian Unionists.
Church of Scotland.
Church of Christ.
Church of the People.
Church of Progress.
Countess of Huntingdon's Connexion.
Disciples in Christ.
Disciples of Jesus Christ.
Eastern Orthodox Greek Church.
Eclectics.
Episcopalian Dissenters.
Evangelical Unionists.
Followers of the Lord Jesus Christ.
Free Catholic Christian Church.
Free Christians.
Free Christian Association.

United Christian Church.
United Free Methodist Church.
United Brethren or Moravians.
United Presbyterians.
Welsh Calvinistic Methodists.
Welsh Free Presbyterians.
Wesleyans.
Wesleyan Methodist Association.
Wesleyan Reformers.
Wesleyan Reform Glory Band.
Working Man's Evangelistic Mission Chapels.

Births.

The births registered during the year 1872 amounted to 825,907, and exceeded by 28,479 the births during the previous year. Allowing for increase of population, the birth-rate per 1000 of population was 35·8, or 1·9 above the mean of 35 years. The number of births has never been so high as it is in the year under review, and, with the exception of the year 1868, the proportion to the population has never been so high.

The increase in the rate from 31·6 per 1000 of population, or one birth to every 32 persons living in the five years 1838–42, to 35·3, or one birth to every 28 persons living in the five years 1868–72, is in some measure due to the progress of registration. In former years the birth-rate of England was less, but during the last six years the birth-rate of England has been higher, than that of Scotland, as shown in the annexed statement.

Years.	Births to 1000 persons living. England.	Scotland.
1867	35·4	35·1
1868	35·8	35·3
1869	34·8	34·3
1870	35·2	34·6
1871	35·0	34·5
1872	35·8	35·0

By the operation of a clause in the Scottish Registration Act registration of both legitimate and illegitimate births within 21 days after birth is enforced by a penalty not exceeding 20*s.*, the penalty not being exacted in cases where it is proved that the neglect to register did not arise from wilful failure. As regards the English Act, the provisions for the registration of births are rather voluntary than compulsory.

A certain proportion of the births that escape registration in England are doubtless illegitimate; but it is to be feared that some thousands of legitimate births also escape registration every year, and I have no expectation of being able to secure the registration of every birth until the parents or other qualified informants are bound under penalties to give the Registrar notice.

On account of the interference of emigration and immigration it is difficult to determine accurately the number of births that escape registration, but it was estimated in the Census Report at 13,614 *annually* in the 10 years 1861–70.

As noted in previous years, the highest birth-rates, in 1872, are observed in the counties of Durham and Stafford, the proportion of births to 1000 of population being 44·0 and 41·9 respectively; the lowest rates, excluding Rutland, where the facts are few, are recorded in the counties of Devon (30·4), Dorset (30·5), and Hereford (30·6).

The recent Census returns confirm previous deductions, and show that counties with a high proportion of married women at the child-bearing ages have the highest birth-rate; thus of every 100 women living at the ages 15–45 in Durham, 59·9 were married, and in Stafford 56·3, while in Devon the proportion was only 45·2, in Dorset 47·0, and in Hereford 47·3. Of every 100 women living in England and Wales, at the ages 15–45, 49·6, nearly half the number, were married.

The Appendix to the Census Report of 1871 contains some interesting results bearing upon this point,* and shows that in the counties containing the agricultural districts the birth-rate is generally low, while in those counties where the great mining industries of the country are carried on the birth-rate is high; thus the proportional number of legitimate births annually in the ten years 1861–70, to every 100 married women aged 15–55, in the counties of Durham and Stafford, was 25·3 and 24·8 respectively, while in the counties of Devon, Dorset, and Hereford, the proportions were only 21·2, 21·7, and 19·7 respectively.

If the ratio of *illegitimate births* to spinsters and widows aged 15–55 be compared in these counties, the results are nearly equally striking; the average annual number of illegitimate births to every 100 unmarried women being 2·2 in Durham and 2·4 in Stafford, while in Devon, Dorset, and Hereford, the proportions were 1·3, 1·5, and 2·0 per cent.

Sex.—The births of 421,307 boys and 404,600 girls were registered in 1872, so to every 100·0 girls 104·1 boys were born. The proportions varied in the different counties: in Bedford (97·6 boys to 100 girls), in Huntingdon (98·6), and in Leicester (99·8), fewer boys than girls were born: the counties in which the largest proportional number of boys was born were, Wilts 107·1, Hants 107·7, Westmorland 108·8, and Hertford 111·4.

Taking the mean of the ten years 1862–71, the highest proportions of boys were in Cumberland, Cornwall, North Wales, Northumberland, and Northampton; the lowest in Huntingdon and Hertford. The smallest numbers fluctuate most, in conformity with a mathematical law.

Children born out of Wedlock.—The number of children born, in any country, out of wedlock is not exactly known. Of the 825,907 births registered in England and Wales in the year 1872, 44,766, or 5·4 per cent., were recognised as illegitimate. The mean of the ten years 1862–71 was 6·0. The per-centage of registered illegitimate births to total registered births has declined from 6·7 in the five years 1846–50 to 5·7 in the five years 1868–72, while the marriage-rate has increased, the number of

* See Vol. IV. Census of England and Wales, 1871.—General Report, Table 81, p. 68.

persons married to every 100 of the population in the seventeen years 1838–54 being 16·3, while the rate in the eighteen years 1855–72 was 17·6.

In those counties which are notorious for a high rate of illegitimacy little or no improvement is observed in the returns for recent years, but a glance at the results for a series of years reveals a striking decrease in the following counties.

	Average Annual Per-centage of Illegitimate Births to Total Births.	
	10 Years 1853–62.	10 Years 1863–72.
Hereford	9·2	8·2
Nottingham	9·0	8·3
Suffolk	8·2	7·3
Leicester	7·9	6·9
Chester	7·9	6·7
Derby	7·5	6·8
Berks	7·3	6·3
Cambridge	7·3	6·7
Wilts	7·0	6·2
Sussex	6·8	5·8
Bucks	6·7	6·0
Lancaster	6·6	5·7
Dorset	6·6	5·8
Worcester	6·5	5·8
Somerset	6·2	5·4
Hants	5·8	5·1
Kent (*extra-metropolitan*)	5·7	4·9
Surrey (*extra-metropolitan*)	4·8	4·1
Middlesex (*extra-metropolitan*)	4·6	3·8

The mean number of unmarried women in England and Wales aged 20–40 at the Censuses of 1861 and 1871 was 1,370,178; and the average annual number of children born out of wedlock in the ten years 1861–70 was 45,701, so if the mothers of these children were all of the ages 20–40, then 3·34 in every 100 unmarried women bore children annually; but a certain proportion (about 11·967 per cent.*) belonged to women under 20 and above 40. Deducting this proportion, it would appear that the number of illegitimate children to unmarried women aged 20–40 was 40,232: so 2·94 in every 100 unmarried women bore children annually, or to every 34 spinsters and widows aged 20–40 one child was born annually.

Deaths.

492,265 deaths were registered in England and Wales in the year 1872, a number less by 22,614 than in the previous year, and less by 23,064 than in 1870. Some of the severe epidemics which so unduly increased the mortality during the last three or four years have subsided, and the year exhibits a comparatively low death-rate, as will be seen by the annexed figures.

Years.	Deaths to 1000 persons living.
1867	21·7
1868	21·9
1869	22·3
1870	22·9
1871	22·6
1872	21·3

The mortality was 1·0 per 1000 below the mean rate of 35 years, and we must refer back as far as the year 1860 to find a death-rate as low as that now recorded.

* See the 14th Annual Report, p. xiii.

An inquiry into the *causes* of the deaths of the year, by Dr. Farr, —showing which of these have prevailed with mitigated severity—will be found in the Appendix to this Report, pp. 219–229.

The year 1872 will be memorable as the commencement of a new era in the promotion of health and the prevention of certain forms of disease, for one great obstacle to sanitary progress has now been removed by the passing of the Public Health Act. The confusion which existed, prior to its passing, as to who was the responsible *local* authority for sanitary purposes is to some extent removed, and a definite authority upon whom devolves the administration of the laws relating to public health is now designated.

The Act requires that England and Wales shall be divided into sanitary districts designated "urban sanitary districts" and "rural sanitary districts." The urban sanitary districts to consist of (1) boroughs, (2) Improvement Act districts, and (3) Local Government Act districts, constituted such either before or after the passing of this Act; the *urban sanitary authority* being (1) the Mayor, Aldermen, and Burgesses acting by council, (2) the Improvement Commissioners, and (3) the Local Board, respectively. The rural sanitary districts to consist of Poor Law Unions, the *rural sanitary authority* being the Board of Guardians.

The Act also requires that every sanitary authority shall appoint, as medical officer or officers of health, legally qualified medical practitioners, an inspector or inspectors of nuisances, and other necessary officers.

The working of the Act has to be established and its administrative machinery perfected before we can see its beneficial operation reflected in a marked improvement of the public health. Successful efforts have been made to improve the sanitary condition of some of the large towns, but the great work of removing causes which are so prejudicial to life—arising from overcrowding, want of proper ventilation, bad drainage, and impure water supply—still remains unaccomplished or incomplete in the towns and villages scattered throughout the length and breadth of the land. Town populations are increasing without equivalent sanitary arrangements, and although any improvement is commendable, still, when such arrangements are but partially carried out, and when only spasmodic efforts are made for the removal of agencies unfavourable to health, they cannot be expected to go far in diminishing the general mortality.

When, through experience, the administrative functions of the local officers are less imperfect, and the sanitary works of the country are no longer partial, the good effects of improvements will be as visible in the death-rate of England and Wales as they are in the reduced mortality of some of our large towns since they have been well drained and supplied with wholesome water.

Until such progress has been made, as the town populations are rapidly increasing, there will be no striking reduction in the death-rate of the country.

Sex and Age.—Of the 492,265 deaths registered in 1872, 255,135, or 51·8 per cent., were those of males, and 237,130, or 48·2 per cent., were those of females, so the deaths of males were to those of females in the proportion of 108 to 100. More boys than girls are born; but, owing to the emigration of males exceeding that of females, the female exceeds the male *population.* On the supposition that the numbers of each sex living were equal, then the deaths of males to every 100 deaths of females would be 113, but the female population is in excess of the male, and notwithstanding the risks of childbirth the mortality of females is less than that of males, the deaths of males to 1000 males living in 1872 being 22·7, while the deaths of females to 1000 females living was only 20·0. The annual rate of mortality of males is ·6 per 1000 less than the mean of 34 years, and 1.2 per 1000 less than in 1871. In the female rate the reduction is still more striking, the annual rate of mortality

in 1872 being 1·5 per 1000 less than the mean of 34 years, and 1·3 less than in 1871.

There are laws governing the rise and decline of diseases which have yet to be discovered, but the sanitary inquiries which have been carried on in connection with the returns of this office for a period of 35 years have done much to disclose the agents which tend to produce epidemic diseases. In the year 1872 the returns of the causes of death show that diseases of children were for the most part the disorders which assumed anything like an epidemic form; and if it be true that children are always the greatest sufferers from epidemics, and that they suffer in proportion to their low sanitary condition, then the agencies that are prejudicial to childhood merit the deepest study of the sanitary reformer.

Of the 255,135 deaths of males registered in 1872, 105,846, or 41·49 per cent., occurred at ages under 5 years. At ages 5–10 years the proportion was 3·78 per cent., and at 10–15 years it was 2·02 per cent., so that to every 100 deaths of males at all ages nearly one half, or 47·29 per cent., occurred at ages under 15 years. Of the 237,130 deaths of females at all ages, 91,593, or 38·63 per cent., were those of children under 5 years. At ages 5–10 the proportion was 3·80, and at 10–15 it was 2·07; the proportional number under 15 years of age, 44·50, was rather less than that for males.

The rate of mortality per 1000 living in the first five years of life was 67·8 for males, and 58·8 for females; at ages 5–10 years 7·0 and 6·5, and at ages 10–15, 4·2 and 4·0 respectively.

A comparison of the mortality in 1872 with the mean annual rate in the 34 years 1838–71 shows that the reduction in the death-rate is in great part due to a lower rate of mortality among children under 15 years of age, as will be seen by the following results, traceable to the decline of some zymotic diseases. Small-pox, whooping-cough, and diarrhœa, however, were especially fatal to children in the year 1872.

The mortality of females in 1872 was lower than their average at all the periods of life except the last: in men the exception covers the middle period of life; the mortality of men of 25–65 exceeds the average. The mortality at the several ages has to be studied in connection with the causes of death.

Seasons.—Great fluctuations in the temperature generally bring about a high rate of mortality, but the meteorological conditions of the year 1872 were favourable to the public health. In the *first quarter* of the year the mean temperature of the air at Greenwich was 43°·6, or 5°

above the average of 101 years, and the rain-fall measured 6·5 inches, or 1·4 inches above the average: owing partly to the clemency of the season the mortality was low, being at the annual rate of 23·5 per 1000 of population, or 1·4 per 1000 below the average of 35 years. In the *second quarter* the mortality was at the annual rate of 21·0 per 1000, or 1·1 per 1000 below the average: the mean temperature of the season was 52°·8, or 0°·5 above the average, but the weather during the quarter was very changeable; the rain-fall at Greenwich was about the average, viz., 5·7 inches. In the *third quarter* the rain-fall was below the average quantity at Greenwich, but in the country generally as much as 10·1 inches fell; the annual death-rate was equal to 20·5 per 1000 of population against an average rate of 20·7: the weather was warm, the mean temperature being 61°·1, or 1°·5 above the average. In the *last quarter* of the year the extraordinary amount of rain which fell—11·3 inches, or 4·2 inches above the average—and the high temperature of 45°·3, or 1°·7 above the average, apparently exercised a beneficial influence on the public health, the annual rate of mortality being only 20·2 per 1000 of population, or 1·7 per 1000 below the average. Detailed information respecting the meteorology and evidences of the registration returns in the four quarters of 1872 is contained in the "Summary of the Quarterly Reports" given in subsequent pages (xxx–xlviii), and in Mr. Glashier's remarks on pages lvii–lix.

Locality.—In reviewing the mortality in different localities the occupations and density of the population, together with other elements, have to be taken into consideration. The results recorded year by year show that a much larger number of deaths in proportion to population occurs in towns than in rural districts; special causes are at work in the denser districts of England and Wales most injurious to life. In the year under review the deaths were singularly below the average in the districts and sub-districts comprising the chief towns; the average annual death-rate among these, in the 10 years 1862–71, was 25·0 per 1000 of population, whereas in the year 1872 it was only 23·4. Turning to the eleven great *divisions* into which the country is divided, two—the North Midland, and the Northern—are observed where the mortality was high, but with these exceptions the mortality was below the average in the 10 years 1861–70 in every division. In Leicester the rate of mortality was above the average by 1·3 per 1000, in Durham by 1·5, in North Wales by 1·6, and in some other counties there was a slight rise in the death-rate. London was much healthier than usual, and the other divisions in which the greatest reduction in the mortality is observed, as compared with the mean annual rate in the 10 years 1861–70, are the South Eastern, North Western, Eastern, South Midland, and South Western. In *Counties* the reduction is greatest in Hereford, where the fall was 3·4 per 1000, Berks 2·8, Hunts 2·5, Gloucester 2·5, Dorset 2·3, Surrey (extra-metropolitan) 2·3, Middlesex (extra-metropolitan) 2·2, Bedford 2·1, Wilts 2·0, and Sussex, Bucks, Oxford, Essex, and Lancaster, each 1·9.

In the "Summary of the Quarterly Reports" subsequently given (pp. xxx–xlviii) will be found detailed remarks upon the sanitary condition of different localities as indicated by their death-rate in each quarter of 1872, together with such conclusions relative to the marriages and births as seemed to be deducible from the observed facts. And with regard to the large cities and towns, of which a selection of seventeen has been made, with London at their head, I have nothing now to add to the comments in the Annual Summary of the Weekly Returns for 1872, hereto appended (pp. xlix–lvi).

Deaths in Public Institutions.—It appears that of the total deaths registered in England and Wales in 1872, 42,806, or 8·7 per cent., occurred in 1245 principal public institutions. Of these 42,806 deaths,

27,374, or 64 per cent., occurred in 712 workhouses, 11,638, or 27 per cent., in 450 hospitals, and 3794, or 9 per cent., in 83 lunatic asylums. The large increase (104) in the number of hospitals since last year is chiefly owing to the general erection of Cottage Hospitals throughout the country.

As explained in an introductory note (p. 99) the Table of deaths registered in the principal public institutions situate within the several districts and sub-districts (pp. 100–117) will afford the means of correcting the death-rates, and so will be invaluable for purposes of local inquiry. Obviously, there is great disparity in the facilities the populations of different parts of the country have of access to institutions for the relief of their necessities. In London 16·7 per cent. of all the deaths registered in 1872 took place in workhouses, hospitals, or lunatic asylums, in the South Eastern Counties the proportion was 11·7 per cent., in the South Midland 9·2, in the Eastern 8·2, in the South Western 7·0, in the West Midland 7·8, in the North Midland 6·0, in the North Western 8·2, in Yorkshire 5·6, in the Northern Counties 5·1, and in Monmouthshire and Wales 3·9.

Progress of Registration.

Names on the Registers, and Searches.—The names of all persons whose marriages, births, and deaths, have been recorded in the registers during the last 35½ years are, for the convenience of public reference, inscribed in alphabetical Indexes deposited at the Central Office.

From the middle of the year 1837 to the end of the year 1865 the Indexes are in *manuscript* and extend over 1,741 volumes. For the years 1866–72, the Indexes are *printed*, and are consequently less voluminous; they comprise only 84 volumes. The 48,759,698 names—of which 1,720,706 were entered in 1872—are, therefore, contained in 1825 volumes. The Index for the year 1872 consists of 12 volumes.

That the public are alive to the increasing utility of the registration of marriages, births, and deaths, may be inferred from the fact that the annual number of searches in the five years 1843–7—exclusive of searches in non-parochial registers, and of searches for purposes connected with the Factory Acts—averaged only 778, whereas in the five years 1868–72, the average annual number was 15,057 at the Central Office. The amount of fees received and paid into Her Majesty's Exchequer for searches and certificates in the year 1872 was 2,867*l.* 5*s.* 6*d.*

For a complete list of all the public registers and records in my custody I refer to my 34th Annual Report (pp. xxi–ii).

United Kingdom.

The enumerated population of the United Kingdom, excluding the islands in the British seas and Army, &c. abroad, at the Census of 1871 was 31,484,661,* and it is estimated that by the middle of the year 1872 the population had increased to 31,839,260, of which 23,067,835 belonged to England and Wales, 3,399,226 to Scotland, and 5,372,199 to Ireland.

The estimated increase of population in England and Wales, from the middle of 1871 to the middle of 1872 was 285,023, and that of Scotland 31,304, but in Ireland the population continued to be reduced by emigration and the estimated decrease of population in this part of the United Kingdom in the twelve months ending 30th June 1872 was 22,808.

In the year 1872, 78,102 *Irish* emigrants left the Irish ports, being an increase of 6862 over the number in 1871. The diminution in the population of Ireland since 1851 has been caused by emigration alone, no fatal epidemic having prevailed during that period, and the official returns

* This will be found to differ slightly from the population returned in the 34th Annual Report p. xxiii. owing to the numbers for Ireland, at the date of publication, not being finally revised.

show that no less than 2,162,596 emigrants left Ireland during the period from 1st May 1851—the date when the collection of the returns first began to be made at the several Irish Ports—to 31st December 1872. These numbers include not only emigrants as hitherto understood, but all the Irish who leave their ports to go to England, Scotland, and the Channel Islands.

The registration of marriages, births, and deaths in Ireland continues defective; and the Registrar General of Ireland* regrets that there is but little improvement in recent years. Notwithstanding the institution of several prosecutions which have been attended with some advantages, he still has to report numerous cases of neglect to register births and deaths. The registration of marriages is also unsatisfactory owing to the clergy in some districts declining to sign the necessary certificates.

The marriage-rate in England in 1872, 17·5 per 1000 of population, is higher than that of Scotland 15·1; the English birth-rate is also higher, 35·8, whereas in Scotland it was 35·0. The respective death-rates were 21·3, and 22·3, the mortality of Scotland exceeding that of England by 1 per 1000.

The Army.

The returns relating to the British Army for the year 1872—with which I have been favoured by His Royal Highness the Field Marshal Commanding-in-Chief, show that the mortality of the Army at home was below the average, while the mortality of the portion of the Army serving abroad was above the average. The average strength of the Army at home and abroad in 1872 was 192,007, and the number of deaths was 2649, the rate of mortality being 13·8 per 1000, against 12·1 in 1871.

At home, the average strength was 104,154, the deaths were 940, and the rate of mortality per 1000 of mean strength was 9·1 among officers, and 9·0 among non-commissioned officers and men, against an annual average of 10·5 and 11·2, respectively, in the six years 1866–71.

Abroad, the average strength in 1872 was 87,853, the deaths were 1709, and the rate of mortality per 1000 of mean strength was 14·2 among officers, and 19·7 among non-commissioned officers and men, against an annual average of 12·6 and 18·3, respectively, in the six years 1866–71.

The Navy.

The official returns for the year 1872 show that the total force afloat was 46,830, and the deaths 385, so the rate of mortality was 8·2 per 1000. Compared with the previous year this represents a reduction of ·3 per 1000.

The number of deaths from disease was 266, and from wounds, injuries, and drowning 119. The mortality from disease was 5·7 per 1000, and from wounds, &c., 2·5 per 1000, against 6·3 and 2·1, respectively, in 1871.

Out of the 266 deaths from disease, 11 are referred to small-pox, 23 to enteric fever, 53 to consumption, 25 to heart disease, and 31 to pneumonia. In every 100 deaths 30·9, or nearly one-third were from wounds, injuries, or drowning.

The lowest ratio of sickness in 1872 was on the South-east Coast of America; the highest on the Mediterranean Station. Only 4 unimportant cases of scurvy occurred, a rare disease so far as the royal navy is concerned.

The mean force employed in 1872 on the *Home* Station was 23,000, and the deaths were 144, being in the proportion of 6·2 per 1000, and representing a reduction of ·4 per 1000 compared with 1871.

* See the 7th Annual Report of the Registrar General of Ireland recently published, relating to the Abstracts for the year 1870, pp. 14–15.

The annexed Table shows the mortality at the different Stations during the year 1872 :—

Stations.	Deaths per 1,000 Force.			
	In the Year 1872.			Annually in 16 Years.
	From Disease.	From Wounds, Injuries, and Drowning.	Total from All Causes.	Total from All Causes.
Home	4·9	1·3	6·2	8·1*
Mediterranean	5·8	1·6	7·4	9·9
North America and West Indies	6·4	3·1	9·5	17·7
South-east Coast of America	7·5	1·5	9·0	16·1†
Pacific	4·0	4·5	8·5	9·3
West Coast of Africa & Cape of Good Hope	13·7	2·2	15·9	24·4
East Indies	8·6	4·0	12·6	15·3
China	2·9	2·6	5·5	35·5
Australia	6·3	1·8	8·1	11·7
Irregular	6·7	5·6	12·3	10·1
Total	5·7	2·5	8·2	—

* Including the deaths by the loss of Her Majesty's ship Captain the rate was 9·5.
† Including the deaths by the loss of Her Majesty's ship Bombay the rate was 21·2.

The following Table shows the number of men and boys in the Royal Navy, and the number of deaths from disease and injury in the five years 1861–5, at different periods of age :—

Ages.	Number of Men and Boys enumerated five times in the 5 Years 1861-65.	Number of Deaths in the 5 Years 1861-65.			Deaths per 1000 Strength *annually* in the 5 Years 1861-65.		
		Disease.	Injury, including Drowning.	Disease and Injury.	Disease.	Injury, including Drowning.	Disease and Injury.
All Ages	223,135	1,830	971	2,801	8·2	4·4	12·6
15–25	124,361	890	543	1,433	7·1	4·4	11·5
25–35	69,701	555	308	863	8·0	4·4	12·4
35–45	21,059	261	96	357	12·4	4·6	17·0
45–55	5,982	100	17	117	16·7	2·8	19·5
55–65	2,032	24	7	31	11·8	3·4	15·2

From this Table it will be seen that the average annual rate of mortality from disease in the Navy, in the five years 1861–5, increased from 7·1 per 1000 strength at ages 15 and under 25, and 8·0 at ages 25–35, to 12·4 at ages 35–45, and 16·7 per thousand at ages 45–55. The proportional number of deaths from violence is nearly the same at the periods of age 15–25, 25–35, and 35–45.

Births and Deaths of British Subjects at Sea.

Marine Register Book.—By the Act 6 & 7 Will. IV. cap. 86. sections xxi. and xxvi., and by the Merchant Shipping, and Passengers' Acts, it is required that captains or commanding officers of British vessels shall send to me a copy of the particulars touching births and deaths that occur at sea among English subjects, but the particulars of only 73 of such births and 219 of such deaths were reported to me in 1872 and entered in the Marine Register Book at this office, whereas the number of births

and deaths of British subjects at sea reported to the Registrar General of Shipping and Seamen during the year was 289 and 547 respectively.

Mercantile Marine.—The Registrar General of Shipping and Seamen reports the number of mariners at sea, exclusive of masters, in the year 1872 to be 203,720. Out of this number 4123 deaths occurred, and though still excessively high, the mortality, 20·2, was below the average of the previous 20 years, 21·1.

The number of mariners in the Merchant Service, exclusive of masters, whose deaths are referred to drowning by accident and by wreck in 1872 was 2297 out of a total force of 203,720: the number of deaths in the Royal Navy from drowning in the same year was 67, out of a force of 46,830, so the respective rates of mortality from this cause of death were 11·3 per 1000 in the Mercantile Marine, and only 1·4 per 1000 in the Royal Navy. There can be no doubt that the dangers of the sea are greatly aggravated by the neglect of required precautions.

Wills.

Printed Calendars of all grants of probates and administrations from the year 1858 to the present time, showing the names and descriptions of the testators and intestates alphabetically arranged, together with other particulars, are deposited for public reference at this office.

Mr. Leslie in his annual report of Judicial Statistics for 1872 publishes a return from the Chief Registrar of the Court of Probate, which shows that the number of probates and administrations granted at the Principal Registry during the year was 15,455. The value of the effects was sworn under 63,421,915*l.*

The returns furnished by the district Registrars record the number of probates and letters of administration granted in the 40 district registries during the year as 24,850. The value of the property under which these probates and administrations were sworn was 52,012,993*l.*

The results for the Principal and District Registries combined were—probates and administrations 40,305—value of effects sworn under 115,434,908*l.* The average value for each being 2864*l.* against 2826*l.* in the previous year. The proportion of the cases in which people above the age of 21 left wills, or left estates on which letters of administration were taken was 1 in 6·2, or 16·2 per cent.

Sub-districts of England and Wales.

The registration of births and of deaths is performed either at the houses of the people or at the offices of the 2,195 registrars. As each informant has to go to the office of the registrar of his sub-district, or the registrar has to go to the house in which the event occurred, it is evident that the size of the sub-district is one important element in the administration of the Act. A second element is the population, for the births and deaths bear a certain though variable relation to the existing numbers. A third element is also important, and that is the mode in which the population is distributed over the area as the population may be dispersed pretty evenly in farms and cottages over a wide area of country, or a dense ward of a city; again it may be, and is often concentrated chiefly in a town, but with wide suburbs, and with open country parishes associated with the town for registration purposes. The original church registration of baptisms and burials, as well as marriages, was parochial; it was performed at the church; so the informants had to go to the registering clergyman, but had not to travel further than the limits of the parish which, however, might be great or small. That system of registration was, as it is well known, incomplete, as regards both births and deaths.

The sub-district was substituted for the parish as the registration administrative area; and containing a variable but an average number of

7 parishes, it increased the distances to be travelled; with this alleviation to the public, but aggravation to the labor of the registrar, that the registration of birth or death might be performed in the house where the event occurred.

There were countervailing advantages: where the registrars were paid by a fee for each event registered, an extensive population might supply them with sufficient employment, and such an income as would command the services of educated men.

The division of the country into sub-districts in the first instance was made by the Poor Law Commissioners and Guardians, apparently without any very definite rule as to size or population; but the general result is, that there are seven parishes on an average to each; that the average area of a sub-district is 26½ square miles, the average population in 1871 *ten thousand three hundred and forty-seven:* while the average number of persons married in a sub-district in that year was 173, of births 363, of deaths 235. Then the weekly number in an average sub-district was 7 births, and 4 or 5 deaths; making about 11 births or deaths weekly. If the registrars visit every house to register births and deaths, they cannot on *an average* travel more than *two* miles in each case, nor probably much less than one mile unless they arrange to register the births periodically in beats. Their pay is at the rate of a shilling an entry, and 1*s.* 6*d.* additional for the first 20 births or deaths.

While the average area and population are as given above, the extremes are very wide from the average. The sub-district of Berwick-street, St. James's, London, comprises only 24 acres (0·0375 mile), while Bellingham in Northumberland, round the tributaries of the North Tyne comprises 175,131 acres (274 square miles).

The annexed Table (A.) shows that 11 sub-districts have less than 1000 inhabitants; and 11 have populations ranging from 71,319 to 123,915. The table shows a striking contrast.

TABLE (A.)—The **11 least** and the **11 most Populous Sub-districts (1871).**

DIVISION.	DISTRICT.	SUB-DISTRICT.	POPULATION.	AREA IN ACRES.

X.	Bellingham	Bellingham	175,131	3,790

Note.—A square mile consists of 640 acres.

As it is evident that both area and population have to be taken into account in forming districts of suitable size, I have shown in the sub-joined Table (C.) the populations of sub-districts of every degree of magnitude.

TABLE (C.)—The **Sub-districts** of **England and Wales,** showing their **Area** and **Population.**

[The Mean Area of a Sub-district is 26·566 square miles (=17,002 acres), and the Mean Population is 10,347.]

Mean Distance of Population from Centre.*	Radius of equivalent Circle in Miles.	AREA. Square Miles.	AREA. Acres.	Total Sub-districts.	POPULATION. Under 500.	500–	1000–	2000–	3000–	4000–	5000–	10,000–	20,000–	30,000–	40,000–	50,000–	60,000–	70,000–	80,000–	90,000–	100,000 and upwards.

3·47	5·20	80·0–	51,200–	24	–	–	–	–	1	–	8	12	3	–	–	–	–	–	–	–	–
3·67	5·50	90·0–	57,600–	18	–	–	–	–	1	1	14	2	–	–	–	–	–	–	–	–	–
4·21	6·31	100 & up to 274.	64,000 & up to 175,131.	22	–	–	1	–	5	1	13	2	–	–	–	–	–	–	–	–	–

NOTE.—The Table may be read horizontally thus:—Of 475 Sub-districts having an area of 20 and under 30 square miles (=12,800 or less than 19,200 acres), 1 has a Population of under 500; 1 a Population of 500 and under 1,000; 26 a Population of 1000 and under 2000; 63 a Population of 2000 and under 3000, and so on. Or the Table may be read vertically thus:—Of 800 Sub-districts having a Population of 5000 and under 10,000, 32 have an Area of less than a square mile; 31 have an Area of 1 square mile and less than 5 square miles; 50 an Area of 5 and less than 10 square miles; and so on.

* This is the distance if the Population were *equally distributed* over the area; it is therefore the maximum distance. As the Population is clustered round one or more centres the actual distance is less.

Thus it will be noted that 475 of the sub-districts had an area of 20 and under 30 square miles, equivalent in area to circles with radii ranging from 2·82 to 3·34 miles; that 2 of them had a population under 1000; 244 a population under 5000; 166 a population of 5–10; 54 a population of 10–20 thousand; and 11 a population of 20–30,000.

When a country has once been sub-divided for any administrative purpose in which officers are appointed to distinct portions of territory, any change is attended with some inconvenience, and some disturbance of vested interests. But there can be no doubt that with the experience that has been acquired, a better working division of the country could be made now; so as to retain or secure the services of able registrars, and at the same time to offer the public greater facilities. Thus the sub-districts of 80 square miles of territory, equal to a superficies of 8 by 10 miles are too large; and this is still more the case with sub-districts of 90, 100, and so on up to 274 square miles.

Upon the other hand as regards area, the sub-districts of less than a square mile are below the mark; though many of these very small sub-districts are populous, and five have a population exceeding 50,000.

The large sub-districts of Croydon with 71,319 inhabitants, of Preston with 85,427 inhabitants, including something more than the towns, are conveniently served by one registrar; and the same may be said of the other 9 most populous sub-districts, one of which (Everton in West Derby, near Liverpool) contained in 1871 *one hundred and twenty-three thousand nine hundred and fifteen* inhabitants.

The advantages in towns attainable in ample sub-districts are various; good officers, with due care in the selection can be obtained, as the remuneration is sufficient to pay for the whole of their time, and a place for the registry office can be found in some well known central public building. In the continental cities it is in the Town Hall. As a general rule the largest sub-districts are among those in which the registration is by far the most efficiently performed.

Foreign States.

Through the courtesy of M. V. Falbe-Hansen, Dr. Berg, and M. Von Baumhauer, I am enabled to publish, for the first time, returns of the vital statistics of Denmark, Sweden, and the Netherlands. These interesting returns together with the usual results for other Foreign States will be found in a series of Tables on pp. cxvii–cxxii.

The States are arranged in the order determined by a resolution of the Statistical Congress held at St. Petesburgh in 1873.

The first division represents the North-east of Europe and comprises England, Denmark, Norway, and Sweden; returns from Norway are wanting to complete this division. The Eastern division follows next in order, and is represented by Russia, from which State I hope soon to receive returns. Then follows the Central division comprising Austria (including Hungary), Switzerland, the German Empire, the Netherlands, Luxemburg, Belgium, and France; for this division I have only received returns from Austria, Prussia, the Netherlands, and France. Next in order is the Southern division, comprising Portugal, Spain, Italy, Greece, Turkey, Montenegro, Servia, and Roumania; for this division returns have been received from Spain and Italy. From the United States of America no aggregate returns have been received owing to the regrettable absence of any system of registration under Federal control.

The following Table shows the average annual rates, per 1000 of population, of persons married, births, and deaths in the various States from which returns have been received:—

AVERAGE ANNUAL RATES, PER 1000 POPULATION, IN THE 20 YEARS 1853-72.

COUNTRIES.	ENGLAND AND WALES.	DENMARK.	SWEDEN.	AUSTRIA.	PRUSSIA.	THE NETHERLANDS.	FRANCE.	SPAIN.*	ITALY.*
PERSONS MARRIED	16·7	15·9	14·1	17·3	17·1	15·9	15·9	15·1	15·4
BIRTHS - - -	34·8	31·6	32·0	40·2	39·3	34·3	26·1	37·2	37·3
DEATHS - - -	22·4	20·3	20·4	31·9	28·8	25·7	24·4	29·7	30·1

* The mean annual rates for Spain are for the ten years 1861-70, those for Italy are for the nine years 1863-71.
NOTE.—*See* explanatory note at foot of Table 64 accounting for any remarkable increase in the respective rates.

The marriage-rate, as will be seen in the above Table, is highest in Austria 17·3, Prussia 17·1, and England 16·7. It is lowest in Sweden, 14·1; Spain, 15·1; and Italy, 15·4; and the rate is uniformly in Denmark, the Netherlands, and France, 15·9.

The birth-rate is highest in Austria, 40·2; in Prussia it is 39·3, Italy 37·3, and Spain 37·2. In England, with a defective birth registration, it is 34·8, in the Netherlands 34·3, Sweden 32·0, Denmark 31·6, France 26·1.

The recent Census of France in 1872, after the termination of the war, shows a large decrease of population since the previous enumeration in 1866. The diminution is thus accounted for in the French Census Report :—*

Enumerated Population in 1866 - -	38,192,064
Ditto ditto in 1872 - - -	36,102,921
	2,089,143
Deduct for loss of territories of Alsace-Lorraine	1,597,238
Decrease of Population in the six years 1866-72	491,905

This decrease of population amounting to 491,905 or 1·29 per cent. is mainly attributable to loss of life in the war against Germany, but the report also mentions two other causes, the epidemic of small-pox, which raged in 1870-1, and a decrease in the same years in the number of marriages, and consequently in the number of births. The total loss of population including the territories ceded to Germany is equivalent to 5·47 per cent. If the French increased as rapidly as the English these numbers would be replaced in less than ten years.

It will be seen from the following statement of the numbers, and proportions to population of persons married, of births, and deaths, in France in each of the seven years 1866-72, that after the termination of the war the marriage and birth-rates rose considerably, and the mortality was lower than it had been for some years previous to 1870-1.

FRANCE.

* Statistique de la France, Résultats Généraux du Dénombrement de 1872, pp. xv-xvi.

The death-rates per 1000 of population show that the mortality is highest in Austria 31·9, Italy 30·1, Spain 29·7, and Prussia 28·8. It is lowest in Denmark 20·3, Sweden 20·4, England 22·4, France 24·4, and the Netherlands 25·7.

The mortality in the various States is unduly raised in certain years by pestilence and by war. Thus in 1853 Denmark suffered from cholera and the mortality was raised to 24·3 per 1000, the average being 20·3. Sweden also suffered from the same scourge in 1853, 1857, and 1866, when the respective death-rates were 23·7, 27·6, and 20·0, against an average rate of 20·4. In 1866, Austria and Prussia suffered severely from cholera and their respective death-rates were 33·3 and 35·7, against averages of 31·9 and 28·8. Cholera was epidemic in the Netherlands in 1859 and 1866, and small-pox in 1871; the mortality was 31·2, 28·7 and 29·4 respectively, whereas the average rate was 25·7. France suffered from small-pox in 1865–6 and the rate of mortality in those years was 24·3 and 23·3, the average rate being 24·4; small-pox broke out again in France, as has been mentioned above, in the years 1870–1.

Deaths in war also contributed to raise the mortality in Austria in 1866 to 33·3, in Prussia in 1866, 1870, and 1871, to 35·7, 27·6, and 29·8, respectively, and in France in 1870–1 to 28·3 and 34·8.

I have the honour to be,
Sir,
Your faithful servant,
GEORGE GRAHAM,
Registrar-General.

Summary of the Quarterly Reports, 1872.

First Quarter.—January, February, March.

In the UNITED KINGDOM the births of 279,478 children, and the deaths of 185,611 persons of both sexes, were registered in the three months ending 31st March 1872. The natural increase of population was thus 93,867.

The registered number of persons married in the quarter ending March 31st, 1872, was 113,308.

The marriage, birth, and death rates of the Kingdom differ little from those prevailing in England and Wales.

ENGLAND.—The improvement in the prospects of the marriageable population is shown in the increase of weddings in the first quarter of the year, which exceeded the average, and were considerably in excess of the numbers returned in any winter quarter since 1866. The birth-rate was slightly under the average; the death-rate was low both in town and country. The frosts of the last months of 1871 had proved fatal to many old people, who, like the leaves of autumn, are easily shed; and the survivors enjoyed the mild and exceptional winter that followed, so several thousands of them are alive who must have succumbed had the winter been severe. Small-pox became epidemic at the end of 1870 and raged through the following year; it grew excessively fatal in the spring of 1871 and then declined; but in the past winter it was more fatal than before, and 7720 children and others died of the disease. Scarlet fever and fever were less prevalent than they had been; measles and especially whooping-cough became more active and fatal.

Marriages.—The number of persons married in the first quarter of the year 1872 was 81,078, or 8468 more than in the corresponding quarter of 1871. The marriage-rate which reached its lowest point, 12·9 per 1000, in the March quarter of last year, rose this quarter to 14·1, a higher rate than has prevailed in any corresponding quarter since 1866, and ·3 above the average rate for the winter quarter in the ten preceding years. A comparison of the number of marriages in each county with the average for the three previous corresponding quarters gives the following results worthy of notice. The greatest increase, in proportion to population, is observed in Monmouthshire, Durham, Northumberland, Northamptonshire, and Warwickshire, and may fairly be attributed to the prosperous condition of the population in those counties employed in coal mines and iron works. Lancashire, Leicestershire, Staffordshire, and the West Riding of Yorkshire show a somewhat smaller but still a considerable increase: while Hertfordshire, Huntingdonshire, Norfolk, Wiltshire, Dorsetshire, Herefordshire, and Lincolnshire, the inhabitants of which are for the most part engaged in agricultural pursuits, so far from sharing in the improvement in the marriage-rate, exhibit a positive decrease in the number of marriages registered.

Births.—In the first quarter of 1872, the births of 208,752 children born alive were registered, showing an annual rate of 36·3 per 1000, which is ·8 below the average rate for this quarter of the year. Of the counties, Westmorland, Somersetshire, and Nottinghamshire showed, in proportion to their respective populations, the greatest increase upon the average of the three previous corresponding quarters, and Norfolk, Oxfordshire, and Northamptonshire the greatest proportional decrease.

Increase of Population.—The natural increase of the population, or the excess of births over deaths, amounted during the quarter to 73,800, or 811 per day. The actual increase is affected largely by emigration.

The number of emigrants of British origin who sailed from ports in the United Kingdom at which Government emigration officers are stationed, was 25,660; of whom 15,060 were of English, 1942 of Scotch and 8658 of Irish origin. The total number shows a slight excess over the emigration recorded in the corresponding quarter of last year, the increase being for the most part amongst the emigrants of English origin. Of the above 25,660 persons, 22,931 were bound for the United States, 402 for British North America, and only 1103 for the Australian Colonies, against 2134 in the March quarter of 1871.

Prices, Pauperism, and the Weather.—The price of wheat showed a further slight decline last quarter, the average quotation being 55*s.* 4*d.* per quarter against 56*s.* 3*d.* in the previous three months.

The average price of potatoes per ton at the waterside market, Southwark, which in the four quarters of the year 1871 was respectively 87*s.* 6*d.*, 63*s.* 6*d.*, 68*s.* 6*d.*, and 89*s.* 6*d.*, rose to 100*s.* in the quarter ending 31st March last.

The price of beef and mutton by the carcase at the Metropolitan meat market averaged $6\frac{1}{8}d.$ and $7\frac{1}{8}d.$ per lb. respectively. In the year 1852 the average price per lb. of beef was $4\frac{1}{8}d.$ and of mutton $4\frac{7}{8}d.$ In the year 1854 beef had risen to $5\frac{1}{2}d.$, and from that time until 1868 the average price for each year ranged from $5\frac{1}{8}d.$ to $5\frac{3}{4}d.$ In the three years 1869, 1870, and 1871 it was $6\frac{1}{8}d.$, 6*d.*, and $6\frac{1}{2}d.$ respectively. Mutton rose in 1853 to an average price of $5\frac{7}{8}d.$ per lb., and ranged between $5\frac{1}{2}d.$ and $6\frac{1}{4}d.$ in the following years until 1865, when it reached 7*d.* In the five succeeding years it ranged from 6*d.* to $6\frac{3}{4}d.$, except in 1868 when it fell to $5\frac{5}{8}d.$ In 1871 it was again 7*d.*, and in the first quarter of 1872, as above stated, $7\frac{1}{8}d.$ The increase in price between 1852 and 1872 in the price of beef was 48 per cent. and in the price of mutton 46 per cent.

Upon classifying them according to years in quinquennial periods, there is seen a progressive rise in the prices of both mutton and beef. Beef was never dearer in the London market than it is now; and taking the average of the first five years 1852–56 and the last 1867–71, the rise was 17 per cent.; in the same periods the price of mutton rose 11 per cent. Upon comparing the first with the last ten years, the prices of both meats rose about 9 per cent.; but the prices of wheat and potatoes declined. The price of beef may have been affected by the cattle plague, and the measures of restriction to which it led. Prices too during the whole period have no doubt been enhanced by the depreciation in the value of money circulating in the world. The exorbitant price of butcher's meat might be reduced to some extent by diminishing the consumption, which in many families is excessive; as it is well known that bread, fruit, potatoes, vegetables, and similar diet furnish adequate sustenance to all adults, except to the men employed in severe physical labour, and, among them, agricultural labourers in many counties get little animal food. Greater simplicity in public dinners, where so much food is wasted, might lead to private economy.

Pauperism declined to a considerable extent last quarter. The average number of paupers relieved on the last day of each week was: In-door 149,604; Out-door 777,575. As compared with the winter quarter of 1871, the decrease in the number of paupers receiving in-door relief amounted to 11,364, and in the number of those receiving out-door relief to 101,999. The average numbers for the past quarter were less than in any previous corresponding quarter since 1866.

The warm weather which set in on 13th December 1871, following a period of unprecedented cold, continued with few and slight exceptions till the 18th of March; the mean temperature of these 97 days was more

than 5° above their average; then followed 8 days of severely cold weather, in the temperature of which the average daily deficiency was 7¼°; the remaining five days of the quarter were warm. At the corresponding season in the last 100 years the warmth of the past three months has been but once equalled, viz., in the year 1846, and has never been exceeded. The mean temperature for the quarter was 43°·6 or 5° above the average of 101 years.

The rain-fall during the past quarter amounted to 6·5 inches or 1·4 above the average. In February it was only half the average fall, but in both January and March it was in excess.

State of the Public Health; Deaths.—In the first or winter quarter of 1872, ending 31st March, 134,952 deaths were registered in England and Wales; after making due allowance for increase of population, this number was considerably below the average number in the corresponding quarter of recent years, notwithstanding the epidemic of small-pox which showed a somewhat increased and more general fatality.

The annual death-rate was equal to 23·5 per 1000 of the estimated population, against 25·2, the average rate in the first quarters of the ten years 1862–71; the rate in the first quarters of those years ranged from 21·9 in 1868 to 27·5 in 1864. Temperature exercises a more direct influence upon mortality in the first quarter than in other parts of the year. A severe winter invariably produces a high death-rate. The effect of temperature, however, is partially disturbed by the varying fatality of epidemic diseases. In the ten years, 1862–71, the temperature of the three coldest first quarters averaged 37°·5 Fahrenheit, and the annual death-rate 26·8 per 1000; while in the three warmest first quarters the mean temperature was 41°·8, and the average death-rate did not exceed 23·8 per 1000. The mean temperature last quarter averaged so much as 43°·6, and but for the somewhat counteracting influence of the small-pox epidemic the death-rate would have been unusually low.

In the Eleven Registration Divisions of England and Wales the annual death-rate ranged from 19·2 and 20·8 in the South-eastern and South Midland to 26·6 and 27·3 in the North-western and Northern Divisions. The deaths registered in each of the Divisions were below the average number in the three previous corresponding quarters, except in Yorkshire and the Northern and Welsh counties; the excess in these three divisions was principally due to the small-pox epidemic.

In the principal town districts of the country, comprising all the large towns, and a population of about 13 millions, the annual death-rate last quarter was equal to 25·4 per 1000. The remaining or rural population is about 10 millions, among whom the death-rate did not exceed 20·9 per 1000. The urban rate was 2·0, and the rural rate 1·7, per 1000 below their average rates in the corresponding quarter of the ten years 1862–71. If from the entire urban population be excluded 68 of the largest towns, for which special information is given in Tables VI–IX, it will be found that the death-rate in the smaller towns last quarter was equal to 25 per 1000. Allowance being made for the excessive mortality from small-pox in town districts, it will be seen that the remarkably mild weather which prevailed during the first three months of this year more favourably affected the town than the country death-rates. This result further confirms a fact which has previously been proved from these returns, namely, that it is town populations which suffer most from the rigors of a severe winter.

The 134,952 deaths from all causes, at all ages, in England and Wales during last quarter included 31,123, or 23·1 per cent., of infants under one year of age, and 32,452, or 24·0 per cent., of persons aged 60 years and upwards. The infant mortality showed a slight increase upon that prevailing in the first quarter both of 1870 and 1871, which was 22·6 per cent., while measured by the proportion of deaths under one year to

births registered it was 14·9 per cent. last quarter, against 15·8 and 14·9 in the two previous corresponding quarters. The mild weather exercised a direct influence upon the proportion of the deaths of elderly persons, which, as above stated, did not exceed 24·0 per cent., while in the first quarters of 1870 and 1871 it had been 26·3 and 25·6 per cent. respectively.

To the seven principal diseases of the zymotic class 24,794 deaths were referred in England and Wales during the first three months of this year against 26,997 in the last quarter of 1871; these deaths were equal to an annual death-rate of 4·3 per 1000 of the estimated population, while in the first quarters of 1870 and 1871 the rate from these seven diseases did not exceed 3·6 and 3·8 per 1000 respectively.

The 24,794 deaths from these diseases included 7720 from small-pox, 3121 from measles, 3385 from scarlet fever, 586 from diphtheria, 4699 from whooping-cough, 3544 from different forms of fever, and 1739 from diarrhœa. The fatal cases of small-pox were considerably more numerous than in any quarter since the present epidemic broke out in the latter part of 1870. The deaths from measles were 642 less than the number in the last quarter of 1871, but considerably exceeded the average in the seven previous quarters. The fatality from scarlet fever was lower than in any recent quarter, the deaths from this disease having showed a steady decline from 11,746 in the last quarter of 1870 to 3385 in the first three months of this year. The deaths from diphtheria have varied but slightly in the past nine quarters. Whooping-cough is usually most fatal in the winter quarter of the year, but it was exceptionally fatal in the three months ending March last, causing 4699 deaths against 4451 and 2632 in the corresponding period of 1870 and 1871. The 3544 deaths referred to fever, principally of the enteric or typhoid type, declined from the numbers in the corresponding quarters of 1870 and 1871, which were 4177 and 4073 respectively. The deaths from diarrhœa are never numerous in the first three months of the year.

The continued fatal prevalence of the small-pox epidemic calls for more detailed notice. The deaths from this disease in the first three quarters of 1870 averaged only 450, but in the last quarter rose to 1229; in the four quarters of 1871 they were successively 4903, 7012, 4612, and 6380; last quarter they further rose to 7720, which considerably exceeded the number in any quarter of the past 32 years, and were equal to an annual death-rate of 1·3 per 1000 persons living. Of these 7720 deaths last quarter 1179 were recorded in the three Ridings of Yorkshire, 1075 in the Northern, 900 in the Welsh, 862 in the West Midland, and 831 in the Metropolitan Registration Divisions. The epidemic first became fatally prevalent in London and in the large Lancashire towns; here the numbers of deaths have shown a steady decline in recent quarters. The next most important outbreak occurred in the Northern counties, especially in Northumberland and Durham, and apparently reached its climax in the latter part of last year, as the fatal cases last quarter had considerably declined, although again exceedingly numerous in many town districts of those counties. The deaths from small-pox showed a marked and general increase in each of the eight other Registration Divisions, especially in South Wales. It will be useful briefly to note a few of the places in the different divisions in which the epidemic was most fatal, or in which new outbreaks occurred during last quarter. In the South-eastern counties, 67 deaths from this disease occurred in Dover, and 43 in Portsmouth, while they had declined in Alverstoke. In the South Midland counties the most notable outbreak occurred at Northampton, resulting in 157 deaths against 47 in the preceding three months; Bishop Stortford, St. Albans, Bedford, Biggleswade, Cambridge, and Wisbech also suffered from the disease. The 611 deaths in the Eastern counties included 53 in West Ham, 91 in Yarmouth and Mutford, 273 in Norwich, and 18 in Thetford; the fatality

in Norwich showed a considerable decline in the latter part of the quarter. In the South-western counties Plymouth and the surrounding Districts formed the principal centre of infection in which 233 fatal cases were reported; the epidemic also prevailed in Bridport, Bideford, Redruth, Bridgwater, and Yeovil. Of the 862 deaths in the West Midland counties, 263 were returned in Wolverhampton, which was the first important centre of infection in the Division; these showed a slight decline from the number in the preceding three months, and the violence of the epidemic had considerably abated during March and the early weeks of April; the other towns of this Division in which the disease most severely prevailed were Walsall, Dudley, Stourbridge, Coventry, Wellington (Salop), and to a less extent Bristol and Birmingham. Nottingham was the principal centre of infection in the North Midland counties, in which town 170 of the 588 deaths from small-pox occurred, showing a considerable increase upon the previous quarter; the epidemic also became fatally prevalent last quarter in the neighbouring Districts of Radford, Basford, Mansfield, and Worksop; and also prevailed in Chesterfield, Belper, and Ashby-de-la-Zouch; towards the end of the quarter, and during April, the disease became epidemic in Leicester. In the North-western counties the deaths from small-pox showed a general decline last quarter, which was most conspicuous in Liverpool, Birkenhead and Manchester. In the Yorkshire Division the deaths from small-pox, which had been 69, 98, 129, and 708 in the four quarters of 1871, further rose to 1179 in the first three months of this year; of these, 895 occurred in the West Riding, including 430 and 88 in the boroughs of Sheffield and Leeds, and 63 in Doncaster, 60 in Wakefield, and 48 in Pontefract Districts; of the 169 deaths in the East Riding, 118 occurred in the borough of Hull, and 20 in York district; the 115 in the North Riding included 38 in Scarborough, 36 in Malton, and 18 in Guisbrough Districts, respectively. In the Northern Division the fatal cases which had been 1566 and 1546 in the two preceding quarters declined to 1075 in the three months ending 31st March last, of which 781 occurred in the county of Durham, 262 in Northumberland, 32 in Cumberland, while Westmorland was the only one of the English counties in which no death from small-pox occurred; in Durham county the epidemic, although still fatally prevalent in the mining districts, showed a general decline, especially in Sunderland, South Shields, and Gateshead, but in Auckland District the fatal cases rose from 105 in the last three months of 1871, to 199 last quarter; in Northumberland the decline was general, but most marked in Newcastle and Tynemouth; the deaths from this cause in Cumberland were principally confined to Cockermouth and Wigton, and showed a decline upon those in the preceding three months. In the Welsh Registration Division, including the county of Monmouth, the fatal small-pox cases, which had been 141 and 539 in the two preceding quarters, rose to 900 in the first three months of this year; of these, 334 occurred in Monmouthshire and 420 in Glamorganshire, so that the number in the rest of South and North Wales did not exceed 146; Bedwelty and Newport Districts in Monmouthshire, and Merthyr Tydfil, Neath, and Pontypridd in Glamorganshire, suffered most severely from the epidemic; in other parts of Wales the disease was prevalent in Crickhowell, Holywell, St. Asaph, and Carmarthen.

The annual death-rate from small-pox in England and Wales during the first three months of this year was, as before stated, equal to 1·3 per 1000 of the estimated population, against 1·1 in the last quarter of 1871. In the 18 largest English towns, the 2585 fatal cases were equal to an average annual rate of 1·6 per 1000; while in 50 other large towns 1296 deaths from small-pox occurred, or equal to 2·1 per 1000. In England and Wales, exclusive of these 68 large towns, which are now estimated to contain a population of about 9,000,000 persons, the deaths from small-pox last quarter were therefore 3839, or equal to an annual rate of nearly

1 per 1000 of a population of rather more than 14 millions. The following are a few of the highest death-rates from small-pox per 1000 persons living during last quarter :—among the 18 largest cities and boroughs, 13·5 in Norwich, 9·3 in Wolverhampton, 7·7 in Nottingham, and 7·0 in Sheffield ; among the 50 other large town districts, 12·8 in Northampton, 9·8 in Newport (Monmouth), and 7·6 in Dover ; in other town registration sub-districts, 23·8 in Bideford, 15·2 in Tredegar, 14·9 in Bridport, 14·5 in Bishop Auckland, 14·0 in Cadoxton, 13·5 in Radford, 12·8 in Castleford, 12·4 in Malton, 12·0 in Yeovil, and 11·9 in Llantrisaint.

With regard to the distribution of the fatal cases of the other zymotic diseases it may be briefly remarked that measles was proportionately most prevalent in London, Staffordshire, Lancashire, Durham, and the West Riding of Yorkshire; the districts of Bolton and Cardiff showed excessive numbers. Although the deaths from scarlet fever were less numerous than in recent quarters, the disease was more or less epidemic in parts of Staffordshire, Lancashire, the West Riding of Yorkshire, Durham and Cumberland ; Wolstanton, Stoke-upon-Trent, Bury, Burnley, Todmorden and Whitehaven were among the districts which suffered from exceptional prevalence of this disease. The deaths from whooping-cough were exceptionally high last quarter, and the disease was especially fatal in London, Liverpool, Manchester, and West Bromwich. The death-rate from fever was considerably lower than in recent corresponding quarters, but, as usual, showed an excess in the manufacturing districts of Lancashire and Yorkshire ; in Nottinghamshire the deaths from fever had considerably declined from the high number returned in the last three months of 1871, but they were again excessive; the fatality from fever was exceptionally high in the borough of Sunderland and in Strood (Kent), Whitchurch (Hants), Radford, Yarm, and Llanelly sub-districts. A considerable reduction in the death-rate from fever has occurred in recent years, and has been especially conspicuous in London. There is little doubt but that this result is directly due to an increased efficiency in sanitary supervision. When the whole country shall have been brought under the organised control of sanitary authorities we may hope for a still more strongly marked decline in the fatality from zymotic diseases. So long, however, as the appointment of health officers, even in large towns, is optional, and so long as rural districts are not formed into organised sanitary districts, it is almost futile to hope for a more rapid decrease of the waste of life from these causes which is continually occurring around us.

During the three months ending 31st March last 6193 deaths in England and Wales, or 4·6 per cent. of the total deaths were registered upon the information of the coroners, being inquest cases, against 6789 and 6910 in the corresponding quarters of 1870 and 1871. The deaths referred to different forms of violence during last quarter were 3885, and corresponded with the number in the first three months of 1871 ; the proportion to total deaths was 2·9 per cent.

In the large public institutions of England and Wales, including workhouses, hospitals, and public lunatic asylums, 12,058 deaths were recorded last quarter against 13,394 in the corresponding period of 1871 ; the proportion was 8·9 per cent. of the total deaths, while in the first quarter of 1871 it was 9·7 per cent. ; this decrease occurred principally in the deaths in workhouses, and was due to the mild weather which favourably influenced the death-rate among elderly people.

Second Quarter.—April, May, June.

In the UNITED KINGDOM the births of 279,543 children, and the deaths of 165,933 persons of both sexes, were registered in the three months

ending 30th June 1872. The natural increase of population was thus 113,610.

The registered number of persons married in the quarter ending 30th June 1872, was 124,664.

The marriage, birth, and death rates of the Kingdom differ little from those prevailing in England and Wales.

ENGLAND.—The marriage-rate of the spring quarter of the year has been high, and thus implies that the country has been prosperous. Though the prices of the necessaries of life have risen, or rather though the value of money has fallen, it has not interrupted the progress of the workmen engaged in manufactories, mines, and trades, as their wages have also risen. The births of the April, May, and June quarter were an average number: the deaths were below the average. Although small-pox still prevailed and whooping-cough was fatal, there was a general abatement of deaths from zymotic disease, and notably from scarlet fever and from fever. Thus the returns present generally favourable results; the community has been comparatively healthy and prosperous. Still much remains to be done in the supply of pure water and of pure air; and in the arrangements for the purification of both town and country.

Marriages.—In the second quarter of the year the number of persons married was 100,760, or marriage went on at the annual rate of 17·5 per 1000 living. The increase upon the previous corresponding quarter was 3098 in the number of persons married, and ·4 in the marriage-rate. This increase was unequally distributed amongst the eleven Registration Divisions, the numbers in the North-western and Northern Divisions having largely exceeded their averages for the corresponding quarter in the three previous years, while the excess in the South-eastern and South-western Divisions was very slight. Of the counties, Northamptonshire, Monmouthshire, Bedfordshire, Staffordshire, Durham, Cheshire, Leicestershire, Lancashire, and Westmorland, showed the greatest proportional increase. A decline was exhibited in Berkshire, Buckinghamshire, Cambridgeshire, Devonshire, Herefordshire, and North Wales.

Births.—In the second or spring quarter of the year 1872, the births of 208,790 children born alive were registered. The increase upon the number registered in the corresponding quarter of the previous year was 7625. The birth-rate was 36·3 per 1000, which is identical with the average rate for the spring quarter in the ten preceding years, but ·8 above the rate for the June quarter of 1871. Compared with the average number in the second quarter of the three previous years, the number of births in each of the eleven Divisions showed an increase, such increase being proportionally greatest in the Northern and least in the South-western Division. In the county of Durham the number of births was 14 per cent. above the average; in Dorsetshire it was 3 per cent. below the average.

Increase of Population.—The excess of births over deaths amounted to 87,955 in the three months, being at the rate of 967 per day. This large natural increase of population was, however, to a considerable extent counterbalanced by emigration, 89,213 persons of British origin having sailed during the quarter from ports at which emigration officers are stationed. Of these 89,213 emigrants, 40,423 were English, 9168 Scotch, and 39,622 Irish; in the second quarter of 1871 the number of British emigrants was but 83,399.

Prices, Pauperism, and the Weather.—A slight rise occurred in the price of wheat, the average price per quarter being 56*s.* 8*d.* in the three months ending 30th June last, against 55*s.* 4*d.* in the previous three months. In the corresponding quarter of 1871 the average price was 59*s.* 9*d.*

Potatoes were dear, the average price per ton at the Waterside Market, Southwark, being 137*s.*, or 73*s.* 6*d.* per ton higher than at the same period of last year.

The upward tendency in the price of meat still continued. The average prices of beef and mutton, by the carcase, at the Metropolitan Meat Market were 6⅜*d.* and 7⅜*d.* per lb. respectively, showing a further rise of ¼*d.* per lb. in each kind of meat upon the high prices which prevailed in the previous quarter.

The returns of pauperism were again favourable, showing a decline in the number both of in-door and out-door paupers. The average number of those receiving in-door relief on the last day of each week in the quarter was 134,422, a smaller number than in any corresponding quarter since 1867, and of those receiving out-door relief 724,792, or less than in any corresponding quarter since 1861.

The weather during the quarter was very changeable; periods of excessive and deficient temperature alternated. The mean temperature in April was 2°·3 in excess of the average in 101 years. In May it was 1°·7 below the average, the nights being especially cold. In June the weather was again warm, the mean temperature being 1° above the average. The mean temperature of the whole quarter was 52°·8, or 0°·5 above the average. The lowest reading of the barometer during the quarter was 28·9 in. on 21st April, and the highest 30·3 in. on 6th of the same month. Heavy thunderstorms occurred about the middle of June.

The rain-fall of the quarter at Greenwich was 5·7 in., and was almost identical with the average in 57 years; of this, one inch fell in April, 3·1 in. in May, and 1·6 in. in June. The fall in May was almost an inch in excess, while it was below the average in both April and June.

State of the Public Health; Deaths.—In the second or spring quarter of 1872, ending 30th June, 120,835 deaths were registered in England and Wales; after making due allowance for increase of population this number showed a decline from those returned in the corresponding periods of the three years 1869–70–71. But for the continued and general fatal prevalence of small-pox the mortality during last quarter would have been unusually low. The annual death-rate was equal to 21·0 per 1000 of the estimated population, against 21·8, the average rate in the ten previous corresponding quarters; in the second quarters of those ten years 1862–71 the death-rate ranged from 20·2 in 1868 to 24·2 in 1866.

In the eleven Registration Divisions of England and Wales the annual death-rate last quarter ranged from 17·0 and 17·8 per 1000 respectively in the agricultural counties of the South-eastern and Eastern Divisions, to 23·7 in Yorkshire and 23·8 in the North-western counties, Lancashire and Cheshire. The deaths returned in the three months ending June were below the average numbers for the three previous corresponding quarters in London and in Divisions 2, 3, 4, and 5; an excess was, however, shown in the Midland, Northern, and Welsh Divisions, where the greatest fatality from small-pox occurred.

In the chief town districts of England and Wales, comprising a population of 13 millions of persons, the annual death-rate last quarter was equal to 22·6 per 1000. In the remaining and principally rural population of about 10 millions, the death-rate did not exceed 18·8 per 1000. The urban rate was 0·8 and the rural rate 1·0 per 1000 below the average rates in the corresponding quarter of the ten years 1862–71. Only twice in these ten years (in 1867 and 1868) was the urban death-rate in the second quarter of the year so low as during the three months ending last June; in the second quarter of 1868 the rural death-rate was 17·4 per 1000, but with this exception the rate in this portion of each of the ten years 1862–71 was higher than that which prevailed last quarter.

The 120,835 deaths in England and Wales during last quarter included 27,351 or 22·6 per cent. of infants under one year of age, and 28,466 or 23·6 per cent. of persons aged 60 years and upwards; each of these proportions showed a slight increase upon those which prevailed in the corresponding quarter of last year. Infant mortality measured by the proportion of deaths under one year of age to births registered was 13·1 per cent., against 13·4 and 13·3 in the two previous corresponding quarters.

The seven principal diseases of the zymotic class caused 19,336 deaths in England and Wales during the three months ending June last, against 18,120 and 21,420 in the second quarters of 1870 and 1871; of these 19,336 deaths last quarter 6521 were referred to small-pox, 2530 to measles, 2206 to scarlet fever, 475 to diphtheria, 3415 to whooping-cough, 2745 to fever, and 1744 to diarrhœa. It is worthy of remark that, excluding the fatal cases of small-pox, the deaths resulting from these principal zymotic diseases were 12,815 last quarter, against 17,674 and 14,408 in the corresponding periods of 1870 and 1871. The 19,336 deaths from the seven diseases were equal to an annual rate of 3·4 per 1000 of the estimated population, against 3·2 and 3·8 in the two previous corresponding quarters.

Small-pox is still a fatal and prevailing epidemic in England and Wales. During the ten years 1860–69 the annual deaths from this disease ranged from 7684 in 1864 to 1565 in 1869; and the average quarterly number in the ten years was 873. Last quarter the fatal cases were 6521, a decline it is true of 1199 from those in the first quarter of the year, but with one other exception a higher number than were returned in any quarter of the past 31 years; they were equal to an annual rate of 1·1 per 1000 persons living. The present epidemic, which was first severely fatal in London and Liverpool, reached its climax in those town districts early in 1871, since when it has steadily declined; but with few exceptions all the large towns in each of the Registration Divisions have since suffered more or less severely. Norwich and Ipswich have experienced severe epidemics in the Eastern counties; Plymouth, Portsmouth, Southampton, and Dover in the South; Wolverhampton, Nottingham, Leicester, Northampton, and Dudley in the Midland counties; Sheffield, Auckland, Durham, Newcastle-upon-Tyne, Sunderland, and Tynemouth in the Northern counties; and Tredegar, Newport, Merthyr Tydfil, Swansea, and Neath in Monmouthshire and Wales. Each of these places has in turn become, what may be termed, a centre of infection, from which the disease has spread to smaller towns and rural districts within a large radius, until the epidemic has been more or less felt in all parts of England and Wales. The divisional totals of deaths from small-pox last quarter showed a decline upon recent quarterly numbers in all parts of the country except in the South-eastern counties, and in the 6th and 7th Divisions including most of the Midland counties; in each of the other Divisions the maximum fatality from the epidemic would appear to have been passed. Of the 1483 deaths from small-pox in the 6th Division last quarter, 1028 occurred in Staffordshire, including 489 in Dudley, and 344 in Walsall registration Districts; the fatality from the disease was also very severe in the parish of Kingswinford in the District of Stourbridge. The increased fatality in the 7th Division was principally confined to Leicester, Ashby-de-la-Zouch, and Basford Districts; in Ashby-de-la-Zouch the epidemic was most fatal in Whitwick sub-district, which, it will be remembered, suffered from a severe epidemic of enteric fever during the summer of 1871; of 154 deaths from small-pox in Basford District, 44 occurred in Greasley sub-district, and no less than 81 in the parish of Bulwell, which at the recent Census did not contain a population of more than 4276 persons. In South Wales the epidemic showed in-

creased prevalence last quarter, especially in Pontypridd and Merthyr Tydfil Districts, in which 419 fatal cases were reported, against 241 in the first quarter of the year; the fatality, however, had considerably declined in Neath, and also in the county of Monmouth.

The 2530 deaths referred last quarter to measles in England and Wales showed a slight further increase upon the numbers returned in the corresponding quarters of 1870 and 1871; a large portion of this increase occurred in London and the West Riding of Yorkshire, the disease being very fatal in Bradford; local epidemics of measles also appear to have prevailed in Croydon, Rickmansworth, Alverstoke, and Saltash. Scarlet fever was severely epidemic during 1870, and caused 11,746 deaths in the last quarter of that year, since which the quarterly numbers have rapidly declined, and the 2206 fatal cases returned last quarter were considerably below the number registered in any quarter since the end of 1869; this decline has been general throughout the whole of England and Wales, but the disease was severely epidemic last quarter in Burnley, Dukinfield, and Todmorden, and sharp outbreaks also occurred in many smaller towns and villages, among which may be mentioned Cranbrook, St. Albans, Handborough (Oxon), Wolverton, Ampthill, Bilston, Boston, and Holyhead; these outbreaks could doubtless be traced to defects in the sanitary condition of these places, which should be discovered and remedied. The fatality from diphtheria, which usually rises or falls with that of scarlet fever, was below the average last quarter. The 3415 deaths referred to whooping-cough, although showing a decline of 1284 from those returned in the preceding three months, showed an excess of more than 1200 upon the number in the second quarter of 1871; the fatality from this disease was general, but the proportionally largest excess occurred in London, where 959 deaths were referred to it against 518 in the corresponding three months of 1871. The deaths from diarrhœa last quarter were lower than in the second quarters either of 1870 or 1871; this was probably due to the moderate temperature which prevailed during May and the greater part of June. From simple cholera, or choleraic diarrhœa, 33 deaths resulted, against 26 in the second quarter of 1871. Concerning the principal zymotic diseases, it only now remains to add a few remarks upon the fatality from the various forms of continued fever in England and Wales last quarter. Mortality from fever affords undeniable evidence of an unsatisfactory sanitary condition. It is gratifying therefore to find that the deaths referred to fever, which in the second quarters of 1870 and 1871 had been 3524 and 3269, further declined to 2745 last quarter; compared with the numbers in the three months ending 30th June 1871, those returned last quarter showed a decline in each of the Registration Divisions, except the fourth, containing the Eastern counties. In London, where the sanitary superintendence is perhaps somewhat in advance of the greater part of the country, the decline in the death-rate from fever has been rapid and continuous in recent years. Staffordshire, the manufacturing districts of Lancashire and Yorkshire, and the mining population of the Northern counties still, however, show excessive rates from fever. In the sub-district of Ashton-in-Makerfield (Wigan) 12 deaths from fever were returned last quarter, in addition to 14 from measles, raising the total deaths to 87 in a population of 7463 (at the 1871 Census) against an average of 45 in the three preceding corresponding quarters. Fever was also exceptionally fatal in Walsall and Bilston, and small local outbreaks occurred at Whitchurch (Hants), Bradford (Wilts), and Camelford. So long as any portion of the country, whether urban or rural, is allowed to remain without the control of intelligent sanitary organization and supervision, will this waste of life from fever, and other forms of zymotic disease, be continually reported. The force of public opinion in recent years has done much to improve the sanitary condition of many of our large towns, in spite of the rapidly increasing difficulties arising from the

sewage and water problems; in the smaller towns and villages, however, the same progress has not been made, and it is to their formation into working sanitary districts that we must look for any considerable amelioration in their condition.

During the three months ending 30th June last, 6155 deaths in England and Wales, or 5·1 per cent. of the total deaths, were registered upon the information of the coroners, being inquest cases, against 5807 and 5908 in the second quarters of 1870 and 1871. The deaths referred to different forms of violence during last quarter were 4027, or 3·3 per cent. of the total deaths; in the corresponding period of 1871 the number was 3926, or 3·2 per cent. of the deaths from all causes.

In the large public institutions of England and Wales, including workhouses, hospitals, and lunatic asylums, 11,005, or 9·1 per cent. of the total deaths, were recorded; in the second quarter of 1871 the number of these deaths in institutions was 12,144, or 10·0 per cent. of the total deaths; this decrease principally occurred in the workhouses, and was probably in great measure due to the general decline of pauperism.

Third Quarter.—July, August, September.

In the UNITED KINGDOM the births of 264,879 children, and the deaths of 155,295 persons of both sexes, were registered in the three months ending 30th September 1872. The natural increase of population was thus 109,584.

The registered number of persons married in the quarter ending 30th September 1872, was 122,232.

The marriage, birth, and death rates of the Kingdom differ little from those prevailing in England and Wales.

ENGLAND.—The marriage-rate, which had fallen to a low ebb three years ago, rose after the winter of 1871, and in the last summer quarter ending in September was considerably above the average; the young took a cheerful view of their prospects, and many new families were founded by marriages. The birth-rate of the three months of July, August, and September exceeded the average of the season; and the death-rate was low both in town and country. So the Public Health is growing more satisfactory, and leads us to hope for still further improvement from more effectual sanitary measures. The disasters of the floods and of excessive rain-falls are more than compensated by the better water supply. Against the consequences of the loss of a portion of the potato crop some provision should be made by the supply of vegetables, or of acids, otherwise scurvy may prevail.

Marriages.—In the quarter ending 30th September 1872, 99,636 persons were married, or 6564 more than in the corresponding quarter of 1871. The annual rate was 17·1 per 1000 against 16·2 in the September quarter of 1871, the average rate for the third quarters of the ten years 1862–71 being 16·3. The mining districts of Durham and Monmouthshire, as was to be expected, again showed the greatest proportional increase upon the average number of marriages for the three previous corresponding quarters. In Huntingdonshire, Essex, Bedfordshire, Northumberland, Cumberland, Staffordshire, and the extra-metropolitan part of Middlesex, the increase was also large. The marriages in Wiltshire and Herefordshire were 11 and 16 per cent. respectively below the average for the third quarters of the three previous years. The counties of Kent (extra-metropolitan), Sussex, Dorset, Somerset, Worcester, Rutland, and Westmorland also exhibited a decrease. In London the increase was equal to 8 per cent.

Births.—In the quarter ending 30th September 1872, 201,746 births were registered, or 8475 more than in the September quarter of 1871. The birth-rate was 34·7 per 1000, or 1·0 higher than the rate in the

previous corresponding quarter, and ·6 higher than the average rate for the summer quarter in the ten preceding years. In each of the eleven Divisions, except the South-western, the number of births was greater than the average for the third quarter in the three previous years. The greatest excess was again shown in the Northern Division, particularly in the county of Durham. In Essex, also, the births largely exceeded the average.

Increase of Population.—The excess of births over deaths during the 92 days was 82,819, or at the rate of 900 daily. The counteracting force of emigration, however, diminished the effect of this natural increase of population, 56,778 persons of British origin having sailed during the three months from ports at which emigration officers are stationed. Of these 56,778 emigrants, 36,135 were English, 5,309 Scotch, and 15,334 Irish. The destination of 42,060 was the United States, of 9534 British North America, of 3587 the Australian colonies, and the remaining 1597 were distributed amongst other places.

Prices, Pauperism, and the Weather.—There has been for some time a marked general rise of prices. The price of wheat again rose slightly, the average for the three months being 58*s.* 11*d.* per quarter, against 56*s.* 8*d.* in the previous three months. In the corresponding quarter of 1871 the average price was 57*s.* 9*d.*

Potatoes (best Regents) averaged 119*s.* per ton at the water-side market, Southwark, being 50*s.* per ton dearer than in the September quarter of last year.

A further rise occurred in the price of meat. The average price of beef, by the carcase at the Metropolitan Meat Market, was $6\frac{5}{8}$*d.*, and of mutton $7\frac{3}{8}$*d.* per lb. In the previous quarter the average prices were $6\frac{3}{8}$*d.* and $7\frac{3}{8}$*d.* respectively.

Pauperism continued to decline. The returns for the past quarter, when compared with those for the quarter ending 30th September 1871, show a decrease of 5645, or 4·3 per cent. in the average number of in-door paupers, and of 87,897, or 11·4 per cent. in the average number of out-door paupers, relieved on the last day of each week.

The weather during the whole quarter was changeable. The mean temperature in July, notwithstanding a cold period which lasted from the 8th to the 18th, was 3°·4 above the average, the warmest period in the whole quarter being the 11 days from the 19th to the 29th July, during which the average daily excess of temperature was 7°·9. The first half of August was cold and wet, but during the latter part of that month and the early part of September the temperature was higher, though the weather was unsettled. From the 17th September to the end of the quarter rain fell generally and the daily temperature was deficient. The most remarkable feature of the quarter was the frequency of thunder-storms. In July they were prevalent from the 6th to the 14th, and from the 21st to the end of the month; in August from the 5th to the 12th, and from the 21st to the end of the month; in September from the 2d to the 6th, and from the 19th to the 29th. In consequence of the changeable weather the hay harvest was not completed in July, and the heavy rains and frequent thunderstorms seriously interrupted the progress of the corn harvest in August and September.

The rain-fall of the quarter at Greenwich was only 6·5 inches, and 0·8 in. below the average in 57 years. It was nearly the average in July, exceeded it by 0·3 in. in August, and was 1 in. deficient in September. The rain-fall in the country generally was 10·1 inches; the largest excess occurring in the districts north of latitude 52°. In Salford as much as 16·5 inches fell.

State of the Public Health; Deaths.—In the third or summer quarter of this year, 118,927 deaths were registered; these were 1132 below

the average number in the corresponding three months of the three years 1869–70–71, without taking into account the increase of population. The annual death-rate was equal to 20·5 per 1000 of the estimated population, against 21·1 the average rate in the third quarters of the ten years 1862–71; in those years the summer death-rate ranged from 18·0 and 19·9, in 1862 and 1867, to 23·7 in the remarkably hot summer of 1868.

In the eleven Registration Divisions of England and Wales the annual death-rate last quarter ranged from 16·1 and 16·9 per 1000 in the agricultural counties of the South-western and South-eastern Divisions, to 23·9 and 24·0 in the principally manufacturing counties of the York and North-western Divisions.

Among rather more than 13 millions of persons living in the chief town districts of England and Wales the annual death-rate was 23·1 per 1000, while in the remaining and principally rural population of about 10 millions the death-rate did not exceed 17·0 per 1000. The urban rate was 0·7 and the rural rate 0·5 per 1000 below the average rates in the corresponding quarters of the ten years 1862–71. Only in 1862 and 1867 of the above ten years was the English urban death-rate so low during the third quarter of the year as it was in the three months ending September last; the rural rate was lower in the third quarters of 1862, 1867, and 1869 than it was last quarter.

The 118,927 deaths in England and Wales included 36,615 or 30·8 per cent. of infants under one year of age, and 24,250 or 20·4 per cent. of persons aged 60 years and upwards; the proportion of infant mortality was almost identical with that which prevailed in the third quarter of last year, while that of elderly persons showed an increase of 1·0 per cent. To each 100 births registered last quarter 18·1 deaths of children under one year of age were recorded; the proportion was 20·0 and 19·4 per cent. respectively in the corresponding periods of 1870 and 1871.

The seven principal diseases of the zymotic class caused 27,428 deaths, against 33,963 and 31,388 in the third quarters of 1870 and 1871; of the 27,428 deaths, 2953 were referred to small-pox, 1267 to measles, 2423 to scarlet fever, 406 to diphtheria, 2503 to whooping-cough, 3195 to different forms of fever, and 14,681 to diarrhœa. These 27,428 deaths, of which more than half resulted from diarrhœa, principally infantile, were equal to an annual rate of 4·7 per 1000 persons estimated to be living, against 6·0 and 5·5 in the two previous corresponding quarters.

The fatality from diarrhœa, which is directly influenced by the temperature and rain-fall, may be said in the present day to govern the rate of mortality during the summer or third quarter of the year. The fatality from diarrhœa reached its maximum at the beginning of August, somewhat earlier than usual, owing to the hot weather which prevailed at the end of July; the temperature during the latter part of the quarter was below the average, and the fatality from diarrhœa declined rapidly. The 14,681 deaths reported from diarrhœa during the three months ending September were equal to an annual rate of 2·5 per 1000 persons estimated to be living, against 3·1 and 2·8 respectively in the third quarters of 1870 and 1871. In the 18 large English towns furnishing weekly returns the death-rate from diarrhœa averaged 4·4 per 1000, in the 50 other large towns ranking next in size it was 3·5, and in the whole of England and Wales exclusive of these 68 towns the rate did not exceed 1·5 per 1000. From these figures it is evident that the fatality from diarrhœa is far more excessive in urban than in rural populations; in the agricultural counties of the South-western Division, for instance, the diarrhœal death-rate was only 0·9 per 1000, while it was 3·9 per 1000, or more than four times as great, in the manufacturing counties of Lancashire and Cheshire forming the North-western Division. According to the proportion which prevailed in 1870, 11,862 or 80·8 per cent. of the total deaths from diarrhœa were of infants under two years of age; these deaths therefore exercised an

important influence upon the infant mortality. In presently considering the variations in the death-rate from diarrhœa in the several towns, it will appear that the prevailing branches of industry in some of the principal town centres exercise some effect upon this fatality.

To simple cholera, or choleraic diarrhœa, 471 deaths in England and Wales were referred last quarter, against 527 in the corresponding three months of last year; of these 163 occurred in London.

The epidemic of small-pox, which has prevailed so severely since the latter part of 1870, caused no less than 23,126 deaths during the four quarters of 1871, and 7720 and 6521, respectively, in the first two quarters of the present year. During the three months ending 30th September last the fatal cases of this disease further declined to 2953; this reduced number, however, showed a considerable excess, as the average quarterly number during 1870, notwithstanding a marked increase in the last quarter, did not exceed 655. The deaths from small-pox showed a large decrease upon the numbers returned in recent quarters in each of the Registration Divisions, but Oxfordshire, Dorsetshire, and Westmorland are the only counties in which no fatal case was reported in the three months. In Cornwall and Cumberland the deaths from small-pox showed an increase upon those in the preceding three months, owing to a greater fatality in Penzance and Whitehaven. The other principal places in which the mortality from small-pox was still excessive last quarter were Portsmouth, Dover, Ipswich, Dudley, Whitwick, and Ystradyfodwg (Glamorganshire).

The deaths referred to measles, scarlet fever, and diphtheria were below the numbers returned in either of the two preceding corresponding quarters; the fatal cases of whooping-cough, which had been excessive in the first two quarters of the year, declined in the three months ending 30th September, although the 2503 deaths from this disease exceeded the numbers returned in the corresponding quarters of 1870 and 1871. The 3195 deaths referred to different forms of fever, although exceeding by nearly 500 the number in the second quarter of this year, were lower than those in the third quarters of 1870 and 1871, which were 4635 and 3362 respectively. The mortality from fever has considerably declined in England since 1865, when it was at the rate of 1·1 per 1000 persons living; last year it was less than 0·7 per 1000, and the returns for this year show a further considerable decrease. This decline in the death-rate from fever is satisfactory evidence of decided sanitary progress.

The fatality from zymotic diseases is naturally greatest in the large town centres, where it is fostered by over-crowding, impure air, and impure water. In 18 of the largest English towns the annual death-rate from the seven principal diseases of this class (including diarrhœa) was equal to 7·0 per 1000; in 50 other large, but smaller, towns it was 6·1; and in the whole of England and Wales, exclusive of these 68 towns, the rate was only 3·5. It must always, however, be borne in mind that very many of our smaller towns and villages exhibit in their death-returns the results of an unfavourable sanitary condition, which it is to be hoped will, when the sanitary organization contemplated by the recent Public Health Act shall be completed, stand a fair chance of improvement. Till now many small towns and villages have been entirely without any sanitary authorities, and epidemic diseases have at frequent intervals levied their fatal contributions from the inhabitants, without attracting more than passing local attention. A glance through the sub-district returns in the present Quarterly Return will show that measles was unusually fatal in Brentford and Carnarvon; scarlet fever in Rye (Sussex), Steeple Bumpstead (Essex), Bishop's Castle (Salop), and Aberystwith; St. Austell suffered from whooping-cough, and South Hinksey (Berks) from diphtheria; fever, principally of the enteric type, was fatally prevalent in Liskeard (Cornwall), Hawkesbury (Gloster), Hucknall (Notts), and Ovenden township near Halifax. The most remarkable outbreak of

zymotic disease in the quarter was the epidemic of scarlet fever in Oldham, which resulted in 264 deaths within the registration district of that name, including 217 within the municipal borough; the severity of the epidemic has but slightly abated since the end of the quarter.

During the three months 6209 deaths in England and Wales, or 5·2 per cent. of the total deaths, were registered upon the information of the Coroners, against 5526 and 6032 in the corresponding three months of 1870 and 1871. To different forms of violence 4331 or 3·6 per cent. of the total deaths were referred in the three months; in the corresponding period of 1871 the number was 4202, or 3·5 per cent. of the deaths from all causes.

In the large public institutions, including workhouses, hospitals, and lunatic asylums, 9301 or 7·8 per cent. of the total deaths were recorded; this is the lowest number of institution deaths returned in any quarter since the third quarter of 1870, and is doubtless partly due to the marked decline in the fatality from small-pox, which has since the latter part of 1870 considerably swelled the numbers of deaths both in hospitals and workhouses. The decline of pauperism has also doubtless contributed to the decrease in the workhouse deaths.

Fourth Quarter.—October, November, December.

In the UNITED KINGDOM the births of 270,172 children, and the deaths of 158,744 persons of both sexes, were registered in the three months ending 31st December 1872. The natural increase of population was thus 111,428.

The registered number of persons married in the quarter ending 31st December 1872, was 147,718.

The marriage, birth, and death rates of the Kingdom differ little from those prevailing in England and Wales.

ENGLAND.—The marriage-rate has completely recovered from the depression of the year 1869, and through all the quarters of the year 1872 exceeded the averages of previous years. Births, which had fallen off in 1871, rose again, and exceeded the average number in the year 1872, and notably in its Christmas quarter. The mortality for the year was lower than in any of the last twelve years, and in the Christmas quarter the deaths were only nine in ten of the average number. The reduction of the mortality was greatest in the cold quarters of the year, when the temperature was higher than usual, in the town districts where sanitary improvements have made some progress, and in the sensitive class of acute zymotic diseases. Not only did the population suffer less from small-pox, but also less from measles and diphtheria. Whooping-cough showed some inclination to activity, but fever declined, and scarlet-fever, the plague of the young, failed to reap its accustomed harvest of children. The sickness from these diseases probably declined nearly as much as the deaths. The higher night temperature and the abundant rain-fall undoubtedly contributed to the diminution of the death-toll of the kingdom.

Marriages.—The marriages in the fourth quarter of the year 1872 were more numerous than in any preceding quarter, 121,060 persons having been married in the three months ending 31st December last. The marriage-rate was 20·8 per 1000 persons living, or 0·9 above the mean rate for the fourth quarter in the ten years 1863–72: during those years it was exceeded only once, namely, in the December quarter of 1865. Compared with the average numbers for the corresponding quarter in the three previous years, the marriages in the counties of Monmouth and Durham again showed the greatest increase. In Bedfordshire, Northamptonshire, Cumberland, Nottinghamshire, the East Riding of Yorkshire,

and Northumberland the numbers also largely exceeded the average, while Westmoreland, Herefordshire, and Devonshire exhibited a considerable decrease. A comparison, however, with the numbers of marriages registered in the corresponding quarter of 1871 is less favourable, as an actual decrease is shown in London and in 16 of the counties, while in seven other counties the numbers are nearly identical with those returned for the previous corresponding quarter. In most of these 23 counties the population is engaged principally in agriculture, but among them are also included the counties of Cornwall, Gloucester, Worcester, Warwick, and Cheshire, which contain several populous mining and manufacturing districts.

Births.—The births registered in the quarter ending 31st December last were 206,619, exceeding the number in the fourth quarter of 1871 by 13,150. The birth-rate, 35·5, was higher than in any previous corresponding quarter, and 1·5 above the average rate for the December quarter in the ten years 1862–71. The increase over the average for the three previous corresponding quarters was again much greater in Durham than in any other county; of the remaining counties the largest increase was shown in Warwickshire and Lancashire. Shropshire was the only county in which the births were below the average, but the increase in Devonshire, Herefordshire, and Lincolnshire was very slight. The average birth-rate in the eighteen towns furnishing weekly returns was 37·3, or 1·9 above the rate for the whole of England and Wales. In London the rate was only 35·1. Four others of these towns showed lower birth-rates, the lowest being 32·5 in Norwich. In all the thirteen other towns the rates exceeded the general rate for England and Wales, the highest rate being 48·2 in Sunderland. In the fifty towns ranking next in order of magnitude the average birth-rate was 37·2 per 1000, or nearly the same as in the eighteen towns; the rates in the several towns ranging from 25·8 in Bath and 26·2 in Cheltenham, to 49·5 in Gateshead and 51·7 in Wigan.

Increase of Population.—In consequence of the high birth-rate and the low death-rate in the quarter, the natural increase of the population was large, the excess of births over deaths amounting to 89,068. Emigration, however, was also more active than is usual in the last quarter of the year, 37,855 persons of British origin having sailed during the three months from ports at which emigration officers are stationed, against 30,753 in the last quarter of 1871. Of these 37,855 emigrants, 25,032 were English, 3144 Scotch, and 9679 Irish. The destination of 26,716 was the United States, of 2311 British North America, of 5712 the Australian colonies, and the remaining 3116 were distributed amongst other places. Since 1868 English and Scotch emigrants have increased so as greatly to exceed the Irish in number.

Prices, Pauperism, and the Weather.—The high prices of the principal necessaries of life were still maintained. Wheat averaged 57*s.* 3*d.* per quarter, or 1*s.* a quarter more than in the corresponding period of 1871. The average price per ton of potatoes (best Regents) at the Waterside market, Southwark, was 170*s.* or nearly double the average price in the three months ending 31st December 1871. Beef was slightly dearer and mutton slightly cheaper than in the previous quarter. The average price of beef by the carcase at the Metropolitan meat market last quarter was $6\frac{6}{8}$*d.* and of mutton $7\frac{2}{8}$*d.* per lb. In the quarter ending 30th September the average prices per lb. were $6\frac{5}{8}$*d.* and $7\frac{6}{8}$*d.*, while in the December quarter of 1862 they were $5\frac{1}{8}$*d.* and 6*d.* respectively.

The returns of pauperism again showed a considerable decline, compared with those for the December quarters of 1870 and 1871. The average number of in-door paupers relieved on the last day of each week during the quarter was 138,662 and of those receiving out-door relief 675,644,

or 6 and 29 per 1000 respectively of the total population. In the previous corresponding quarter the numbers were 141,027 and 759,666 respectively; the decrease of in-door paupers being equal to 1·7 per cent. and of out-door paupers to 12·4 per cent.

Till the 24th October the weather was cold, the average deficiency of daily temperature being $3\frac{3}{4}°$. Then followed a warm period till the 9th November, with about an equal average daily excess of temperature. From the 10th to the 19th November was a cold period during which the average daily deficiency was $5\frac{1}{4}°$. A period of 14 days warm weather succeeded, in which the average daily excess was 6°, followed by 16 days of changeable weather from the 3d to the 19th December, after which an extraordinarily warm period set in on the 20th, and continued to the end of the year. During this last period the average daily excess of temperature was more than 9°. The mean temperature in the whole quarter was 45°·3, or 1°·7 above the average of 101 years. In October it was 1°·8 in defect, and in November and December 3°·0 and 3°·8 respectively in excess. The most remarkable feature of the weather during the quarter was the frequency and abundance of rain. Rain fell at Greenwich on 67 out of the 92 days, a greater number than in any previous corresponding period since 1815. In Guernsey rain fell on 80 days, and at Stonyhurst in Lancashire on every day in the three months except two. The total fall was large, amounting at Greenwich to 11·32 inches, a quantity which has only once been exceeded during the corresponding period in the last 57 years, namely in 1821, when the fall was 11·47 inches. Last quarter between latitudes 50° and 51° the rainfall averaged about 16·5 inches, and 15·5 inches between latitudes 54° and 55°. The excess over the average of 57 years was 1·5 inches in October, 0·6 in November, and 2·1 in December.

State of the Public Health; Deaths.—In the fourth or autumn quarter of last year 117,551 deaths were registered, or 12,002 less than the average number in the corresponding three months of the three years 1869–70–71, uncorrected for increase of population. The annual death-rate was 20·2 per 1000, and 2·2 per 1000 below the average rate in the fourth quarters of the ten years 1862–71. During the 35 years 1838–72 the death-rate in the last three months of the year has only twice been lower than in the quarter ending 31st December last; in 1845 the rate was 19·1, and in 1856 20·0. In the other years of this period the annual death-rate in the December quarter ranged upwards to 24·1 in 1858 and 25·5 in 1846.

In the eleven Registration Divisions the annual death-rate last quarter ranged from 16·2 and 17·8 in the agricultural counties of the South-eastern and South-western Divisions, to 23·8 and 22·5 respectively in the North-western and York Divisions, comprising the manufacturing districts of Lancashire and Cheshire, and of Yorkshire.

In the chief town districts, containing a population estimated at rather more than 13 millions, the death-rate was 22·2 per 1000, while in the remaining and principally rural population of about 10 millions the death-rate did not exceed 17·6 per 1000. The urban rate was 2·9, and the rural rate 1·2 per 1000 below their average rates in the corresponding quarters of the ten years 1862–71; in the December quarters of those years the lowest urban rate was 23·9 in 1867, which was 1·7 above the rate for last quarter, while the rural rate in 1867 was 17·7, and nearly corresponded with last quarter's rate. It is evident that the generally high temperature and abundant rain during the last three months of 1872 exercised a more beneficial influence upon the public health in town than in rural districts. A hard winter is most fatal among the dwellers in towns, who suffer from the extremes of poverty; and abundant rain not only mechanically cleanses the streets and sewers, but purifies the atmosphere and carries off zymotic exhalations which generate disease. Although the remarkably low death-rate in town districts last quarter may

be principally due to the somewhat unusual meteorological conditions which prevailed, it may be safe to assume that a portion of the improvement in their health is permanent, and is the result of the general awakening to the importance of sanitary measures which has been so conspicuous in the last few years.

The meteorological influence on the mortality at different ages appears to have been unequal. Of the total deaths 24·0 per cent. were of infants under one year of age, and 25·4 per cent. of persons aged 60 years and upwards; hence 50·6 per cent. were of children and adults between one and 60 years of age against 55·1 and 53·2 per cent. respectively in the last quarters of 1870 and 1871. The proportion both of infant mortality and of deaths of elderly persons to the total deaths was larger than in the fourth quarters of either 1870 or 1871. The deaths of infants under one year of age to births registered last quarter were 13·6 per cent., against 14·4 and 15·7 in the corresponding periods of the two preceding years. It is evident, therefore, that the largest proportional decrease in the mortality occurred among children and adults between one and 60 years; and from the very marked decline in the fatality from zymotic diseases which must next be noticed, it appears all but certain that the proportional saving of life was greatest among children between one and 10 years of age.

The seven principal diseases of the zymotic class caused only 16,794 deaths, against 25,907 and 26,997 in the fourth quarters of 1870 and 1871; of these 16,794 deaths, 1665 were referred to small-pox, 1341 to measles, 3761 to scarlet fever, 525 to diphtheria, 2182 to whooping-cough, 4023 to different forms of fever, and 3357 to diarrhœa. The deaths from these seven diseases were equal to an annual rate of 2·9 per 1000 of the population against 4·6 and 4·7 in the two previous corresponding quarters. The recent epidemic of small-pox was exceptional, and therefore interferes with the value of these figures for comparison. The deaths reported from measles, scarlatina, diphtheria, whooping-cough, and fever, which were 21,629 and 16,554 in the last quarters of 1870 and 1871, further declined to 11,772 in the three months ending December last. The decline in the fatal cases of these five zymotic diseases from the numbers in the fourth quarter of 1871 was equal to 29 per cent., while the decrease in the deaths from all causes did not exceed 13 per cent.

The fatal cases of small-pox, which had been 7720, 6521, and 2953 in the three first quarters of 1872, further declined to 1665 in the last three months of the year; this was the smallest quarterly number since that in the three months ending December 1870, in which the late epidemic first appeared and caused 1229 deaths. In each of the Registration Divisions, except the South-western, the deaths from small-pox showed a further decline from those in the three preceding quarters of 1872; the 1665 last quarter included 94 in Hampshire, 116 in Cornwall, 292 in Staffordshire, 180 in Worcestershire, 142 in the West Riding of Yorkshire, and 76 in Cumberland, while in the other counties the numbers were comparatively inconsiderable. The following figures point out the principal centres of infection in those counties in which small-pox was fatally prevalent last quarter; the fatal cases in Portsmouth were 85, Helston 62, Penzance 37, Newcastle-under-Lyme 31, West Bromwich 80, Dudley 138, Stourbridge 86, Worcester 54, Rotherham 34, York 31, Cockermouth 21, and Whitehaven 52.

The deaths from measles, scarlet fever, and diphtheria have not recently been so few in any quarter as during the last three months of 1872. The deaths from measles were 1341 against 1881 and 3763 in the last quarters of 1870 and 1871; those from scarlet fever and diphtheria 4226 against 12,629 and 5133; the fatal cases of fever further declined from 5364 and 4692 to 4023; while those of whooping-cough, although showing a

decrease upon the number returned in the last quarter of 1871, somewhat exceeded those in the same period of 1870. Although the fatality from these diseases had generally declined, an examination of this return in detail will show that local outbreaks of more or less severity occurred in different parts of the country; among others the following instances may be noted. Measles was fatally prevalent in Northampton, Banbury, Norwich, Hinckley, and Carnarvon; scarlet fever in Chesham, Salisbury, Fowey, Bath, Bishops Castle, Oswestry, Bilston, Sedgley, Hayfield, Runcorn, Radcliffe, Oldham, Whitehaven, Aberavon, Aberystwith, and Tregaron. Fever frequently shows the greatest proportional fatality in the small towns and villages, and the present return affords many examples of the truth of this fact; it is impossible however here to do more than to name a few of the cases of the prevalence of fever that arrest the attention in glancing through the local returns:—Battle, Wellingborough, Kettering, Barking Town, Wellington (Somerset), Stapleford, Glossop, Rotherham, Kimberworth, Mexbrough, Kirkleatham, and Llanelly. Outbreaks of fever may invariably be regarded as due to the presence of zymotic poison, which it is the duty of sanitary organization to remove.

The deaths from the seven principal zymotic diseases in England and Wales were equal as before stated to an annual rate of 2·9 per 1000 persons living. In the 18 large English towns the rate from these same diseases was 3·4 per 1000, and in 50 other large but smaller towns it was 3·3; in England and Wales, exclusive of these 68 towns, the zymotic rate was 2·6 per 1000. As these 68 towns include most of the densest town centres, and a population of nearly nine millions, the fact that there the zymotic rate so slightly exceeds the rate for the whole of England and Wales is a marked proof of sanitary progress. When the smaller towns, villages, and rural districts shall all have been brought within the influence of sanitary organization the rural rates may again compare as favourably with urban rates, as they did before the recent improvement in the health of large towns was inaugurated.

During the three months 6500 or 5·5 per cent. of the deaths in England and Wales were registered upon the information of the Coroners, against 4·9 and 4·8 per cent. in the corresponding quarters of 1870 and 1871. The deaths referred to different forms of violence were 4117, or 3·5 per cent. of all the deaths; in the corresponding three months of 1871 the violent deaths were 4048, or 3·0 per cent. of the deaths from all causes. In workhouses, hospitals, and lunatic asylums 10,136 or 8·6 per cent. of the total deaths were recorded; the proportion in the corresponding quarters of 1870 and 1871 was 8·4 and 8·6 per cent. respectively.

Health of London and other large Cities in 1872.*

THE Great Cities of the world are every year growing greater. Vienna and Berlin have increased rapidly. Paris, for reasons too obvious and deplorable, has remained nearly stationary since the war; but the population amounted at the last Census to 1,851,792, and the capital of France is, after violation by a mob in the face of her enemies and of her own citizens, still the Queen of continental cities. Rome is to be no longer a city of ruins for poets to sigh over, but the living capital of the Italian nation, in sisterly union with Florence, Naples, Turin, Milan, and Venice. In no land, however, are the cities greater than in the English Empire. The cities of India are flourishing. The United States are emulating the land of their origin. But England maintains its ascendancy; and her capital is the greatest the world ever saw. Babylon, Thebes, Rome were never so populous as London, which has now within its widest boundary upwards of *four million* souls; and had in the middle of 1872, within the limits of the Weekly Tables, 3,311,298.

It is evident that the population of its capital must bear some proportion to the population of the empire, and to the population of the States with which it is in relation. Thus the population of Berlin exceeds the population of St. Petersburgh; for though Russia covers a larger area, and has more people than Germany, they are in less intimate relation. And Paris is more populous than the German cities because it has long been the capital of a united nation, in intimate connection with its provinces and with the surrounding States of Europe. While London is the metropolis of a great Empire, with which, as well as with the other States of Europe, America, and Asia, it is kept in intimate connection by means of the mercantile marine, the navy, and the telegraphs. It is the treasury of the wealth and of the mind of a large portion of the world.

Cities are the radiating centres of civilization. And in English cities many economical as well as social advantages are enjoyed; these advantages, too, have undergone no diminution in recent years, otherwise the increase could not have gone on, without their inhabitants exhibiting signs of deterioration, of which no trace exists in the returns. But there is a limit to the growth of every city, as there is a limit to the growth of organic forms; though the extension is neither so definite in space nor in time as it is in species, inasmuch as the growth of cities depends upon the multiplication of coexisting or successive individuals, subject to death indeed, but endowed with surplus powers of reproduction. Some of the canons of the law of limitation are self-evident: a city, for instance, is limited by its water-supply, by its supply of food, by its supply of fuel, by its security from enemies within or without, by its powers of purchasing various requirements, by the attractions it offers in competition with the attractions of other places, and the prices at which these attractions can be purchased. London, in the midst of other centres, attracts and repels various kinds of population in various degrees, and its resident population at a given moment is the result of the equilibrium established at that moment between the various conflicting forces.

The estimated increase of population in the year 1872 was 44,839; and the registered births exceeded the deaths by 46,307 in Registration London.

One cause of the limitation of cities in past ages obtained less attention than it deserves; it is the necessity of removing the daily waste to the atmosphere outside, to the soil or to the sea. The smoke of fires, the dust of workshops, the breath of living things, and all their excretions, are noxious in various degrees. London, with impure wells and without

* Reprinted from the "Annual Summary" for 1872.

sewers, was a city of plagues up to the seventeenth century, and was called in the eighteenth century one of the graves of the nation. The removal of impurities is now carried out to some extent, with the best effect; but difficulties increase, and new engineering agencies have to be brought into the field. The demand, in truth, for new methods of saving and invigorating life is as urgent as the demand for new implements of human destruction.

There is, physically, a limit to the number of people that can live on a given space; in crowds they are in each other's way, and in crowded homes poison each other. The limit varies. London, unlike Venice, has no practical limit of area. As far as houses are concerned, by adopting the system of vertical superposition in stories, so prevalent in the continent and even in some towns of Scotland, the cubical dwelling space on the same area may be augmented; but happily that system has not hitherto prevailed in England. Lofty houses, throwing dark, damp shadows on the streets, each with a common staircase, by which impurities are distributed to many families, however grand to look at, can scarcely fail to be unhealthy to live in.

The population in England is less than one person to an acre of ground; in twenty of the great towns of the United Kingdom the population to an acre is 29, in London within the limits of the Weekly Tables it is 42. But the population is very unevenly distributed over the London area of 78,080 acres: for while, in the large Districts, the persons to an acre are in Lewisham, for instance, 5, in Woolwich 10, Wandsworth 11, the proportions run up to 200 in Holborn, 219 in St. Giles, and 237 in Westminster. In some of the sub-districts the density of population is still greater: in Berwick-street Westminster (St. James), in St. Andrew Eastern, and Whitecross-street Holborn, there are 429, 410, and 418 persons to an acre. 150 persons to an acre in London is, however, a limit beyond which the density of population has not been extending during the last ten years; and in denser districts there has been a tendency of the population to decrease.

The population has decreased in St. George Hanover Square, in Westminster (St. James), and in Marylebone—in all the central districts about the City, in Holborn, the Strand, and St. Giles—in Shoreditch, Whitechapel, and St. George-in-the-East: where the density, if we exclude the river area and the Parks, exceeds the above standard of density.

That the London area is not yet covered is evident from the fact, that if the whole area except the river had a uniform density of 150 persons to an acre, the population would amount to 11,304,300. That such a limit will ever be touched is not probable, as the difficulties of healthy habitation increase with the numbers. Such difficulties are for a time evaded by the residence of householders in the suburbs during the night, and of their families there during day and night. But as the outlying districts, with a few exceptions, although supplied with water, remain imperfectly provided with sewers, or with any other effectual means of removing impurities, this state of things cannot continue without danger, with a population outside the sewerage area running up to a million. Unless the London municipal area be promptly extended so as to include the whole of this outer population, the evils will accumulate to an extent with difficulty reparable.

The worst consequences were apprehended from the increase of London in the reigns of Elizabeth and James I., and an attempt was made to prevent the growth of the capital; but it was in vain, and London grew to its present dimensions in spite of all discouragements, and in spite of the exclusion of nearly the whole of its population from the advantages of municipal institutions: the State ever of old playing the part of a mother that neglects and starves the first born of her children; taking no

pride in its beauty or its growth, but, as if it were not her own, or were her rival, expending her affection on alien objects. Those architectural triumphs, the Tower of London and St. James's Palace, were, exclusive of Westminster Hall, the chief State buildings of the capital until Somerset House was erected. Indeed, London owed its chief ornaments to the Church until quite recently; when a few years of restricted powers of self-government have already given the Metropolis, in addition to its bridges, the grand Thames Embankment, and a vast system of trunk sewers, which, to be complete for the purposes of salubrity, only have to be supplemented by effective branches in communication with every house. The Houses of Parliament, the new Government Offices, the new Courts of Law, and the new Post Office, promise better things; but will London ever rival Athens or Rome in its architecture? Will it find its Pericles?

It is a well-established law that, other things being equal, the insalubrity of a place increases with the density of its population; and that the fevers generated in crowded dwellings have a tendency to spread among the whole of the population. The State, therefore, while it has no right to prevent people in any numbers settling in or near London, has a right to prescribe such conditions of residence as are required in the interests of Public Health.

What is at the present hour especially wanted is the breaking down of the restricted barriers of London, and the extension of municipal organization to the well-considered boundaries laid down in Sir Robert Peel's Metropolitan Police Act, which seems to have taken the prospective increase of population into account: any narrower boundary, while the population is increasing within the great circle at the rate of 75,000 annually, could only be temporary, whereas it is desirable to make the change once for all, or for at least the next hundred years. And it is evident that within this limit the water supply, the drainage, the lighting, the house regulations, and all other municipal regulations, should be under the supreme control of one Municipality, with a great administrator at its head.

The state of things now is, that a small population on 668 acres in the centre, enjoys under a Lord Mayor the old municipal form of government; that 3,266,987 persons on 78,208 acres are living under the Local Management Act, with a paid chairman; and that outside this region 618,654 people, increasing rapidly every day in numbers, are spread over 366,097 acres of land, without sewers, except in a few places, but covered by the Metropolitan Police administration.

If the whole of the people amounting in 1871 to 3,885,641 on a circle with a radius of 15 miles can be administered for police purposes from Scotland Yard, can they not be associated together in one community for the purposes of local government, with the City for the central point of its administration? A city is a Co-operative Society for the supply of common wants; and as the police now discharges the duties of defence which were formerly left to householders, and to parish constables; as common sewers carry away impurities which were formerly got rid of by each householder; so water, light, and perhaps heat, and force to a certain extent, may be provided by a sound municipal organization; in fact, almost every commodity in universal demand which can either only be supplied under monopolies, or be supplied imperfectly under competition. Under this head naturally fall the conditions of healthy existence.

The Greatest London* ; or the Metropolitan Police District.

In this London on the Thames, including all the parishes partly or wholly within a circle of 15 miles (=14·9 miles) round Charing Cross,

* For population of London within its several boundaries *see* Census of England and Wales, 1871, Vol. ii. p. 38.

the mean density of population in 1872 was 9 to an acre; and the annual rate of mortality was 20·8 per 1000. In the 10 years 1861–70 the annual rate was 23·6, in 1871 it was 23·7. The outer ring includes 11 entire districts, with parts of 5 districts; or 44 entire sub-districts; where the mean density of population is expressed by 1·8 persons to an acre, and the mortality was at the rate of 17·5 in 1872, against 19·3 in the 10 years 1861–70, and 19·0 in 1871.

The mortality of the Registration London, at the rate of 24·3 per 1000 during the 10 years, was one-fourth part higher than the mortality in the outer ring; the difference in the annual deaths was 5 deaths in 1000 living. In 1872 the advantages remained in favour of the outside districts, where the population has more air to live in, but the difference in the two rates declined from 5 to 4 in 1000. This is shown in the annexed table:—

ANNUAL RATES OF MORTALITY per 1000.

	Ten Years 1861–70.	1871.	1872.
In the Metropolitan and City Police Districts -	23·6	23·7	20·8
In Registration London - - - -	24·3	24·6	21·5
Outside Registration London - - -	19·3	19·0	17·5

The rates of mortality in the several Districts varied from 15 to 29 per 1000 for the ten years 1861–70, so far as the mortality can be now determined. The deaths in the large hospitals being omitted, the mortality in the other Districts is somewhat understated.

DISTRICTS and SUB-DISTRICTS within the METROPOLITAN and CITY POLICE DISTRICT, arranged in the ORDER of MORTALITY from the lowest to the highest.

(The Districts containing the large Hospitals and Lunatic Asylums are excluded, also Four Sub-districts for other reasons.)

AVERAGE ANNUAL DEATH-RATE per 1000 in the 10 years 1861-1870.

6. Hampstead - - 15·3	39. Richmond - - 19·1	19. Mile End Old Tn - 23·4
27. Lewisham - - 16·2	24. Wandsworth - - 19·5	18. Stepney - - - 24·8
40. Bromley (Kent) - 16·4	125. Brentford - - 20·1	5. Marylebone - - 25·1
186-1. Chigwell - - - 16·7	185. West Ham - - 20·4	2. Chelsea - - - 25·2
29-1 & 2. Carshaltn & Epsom 16·7	28. Woolwich - - 20·7	12. Holborn - - - 25·5

		17. St. Geo. in the East 28·6

Note.—The Districts numbered up to 28 inclusive are in Registration London; the rest are in the Outer Ring.

THE LONDON OF THE WEEKLY TABLES, 1872.

In this year of mild temperature, and great rain-fall, the mortality, which was 21 on an average, varied from week to week: represented by a curve, the mortality had two maxima (26) in the cold second week of January, (27) in the hot first week of August; and two minima, the first (17) in the last week of June, and the second (17) in the third week of September.

Thus the winter and summer diseases prevail most, respectively in the coldest and hottest weather; and then their decline reduces the mortality to a minimum. This law prevailed in the whole of the town popula-

tions, but with considerable variation in particular towns: the highest weekly mortality was met with in Wolverhampton, where in the first three weeks of the year the rates were 59, 49, 47: while some of the lowest weekly rates (14 and 15) prevailed in that town and in Bristol.

Diarrhœa was the prevalent fatal zymotic disease in London, and raised the summer mortality; whooping-cough 3249, small-pox 1781, measles 1680, and fever 1340, were the other most fatal diseases of the same class. The great number of 2608 deaths by violence is remarkable; 2169 having been referred to negligence or accident, 125 to homicide, 268 to suicide, and one to execution. 81 suicides were committed by wounds, 17 of them gunshot; 64 by hanging, 44 by poison, and 57 by drowning, and 22 by other means. The suicides by drowning are probably understated; for the "found drowned" are classed under accident, unless the coroners discovered the cause of the drowning. Efforts should be made to diminish these violent deaths, especially those from vehicles without proper drags, driven in the streets by incompetent drivers. Deaths by burning have happily declined; but 239 deaths by this dreadful cause are still too numerous. Numbers may be rescued as "brands from the burning" by more attention to dress, by fire-guards, and safety ladders. The deaths by burns in the summer quarter, 30, it will be noticed are less than half as many as the deaths in the Christmas quarter following, when more fires are burning.

The Weekly Returns of the number of deaths by fevers in 33 years show what may be the influence of the seasons on these formidable diseases. The influence is not great; the weekly mean number of deaths by fever is 43; and it ranged from 38 in the middle of the year, or the end of June, to 49 and 50 in December. Fever-matter (*typhine*) has an independent life of its own, undergoing periodical developments; thus, while the disease in the middle of 1845 was fatal to 14, 18, and 18 in three successive weeks of July, it rose in 1846, and in three weeks of December 1847 was fatal to 132, 136, and 131 lives in successive weeks: the disease was again epidemic in 1864; while at the end of 1872 it had fallen to a low ebb.

Recent research has shown that the common continued fevers of England may be resolved into three kinds, *typhus;* enteric or typhoid fever (*typhia*); and relapsing fever (*typhinia*). In the early years the species were not distinguished, and even now they are often confounded by common observers; but in 1872 the deaths returned were by *typhus* 175, *typhia* 824, and simple continued fever 341, including probably a few cases of typhinia. Typhus has declined rapidly since 1869, enteric fever (*typhia*) slowly.

12,029 deaths occurred in the public institutions of London; 6177 in the workhouses, 5085 in the civil hospitals, including 94 in hospitals for foreigners; 183 men died in the naval and military hospitals; 16 women and 60 children died in lying-in hospitals, 191 men and 155 women in lunatic asylums. One person in 6 dies in a public institution. Out of 100 deaths 9 occurred in workhouses, 8 in hospitals. The deaths in public institutions are increasing; more dying in hospitals, fewer in workhouses and prisons.

London within the Tables can now be followed through the 33 years 1840–1872; and by means of the Censuses and the death-returns its annual rates of mortality are shown in its five great divisions. The mortality during the whole period is at the rate of 24·3 per 1000; in the West Districts 22·7; in the North Districts 22·9; in the South Districts 24·5; in the Central Districts 25·2; in the East Districts 26·0. The mortality in the five corresponding groups of Districts in 1872 was at the rate of, West 19·6; North 21·2; South 20·9; Central 23·6; East 23·6. The density of population in the five groups, expressed in persons to an acre, was West 52, North 56, South 21, Central 150, and East 107.

This Table (No. 37) is the test of the result of sanitary improvements; and it is gratifying to find, that while the population has gone on increasing, and has grown denser in the parts formerly open, the mortality, on the whole, has not increased; on the contrary, it has decreased; for if, to get rid of fluctuations, we compare the mortality of 1840–9 with that of 1860–9, there is a decrease from 25·2 to 24·3 in the rate, or nearly of 1 per 1000. Taking the five regions, this improvement is found in the West; in the North and the East there is a slight deterioration; in the dense Central region the mortality increased; while in South London the mortality fell from 26·6 to 23·2, or 3·4 in the 20 years of interval. This is decisive evidence of the salutary effects of the drainage of South London, which was formerly a marsh; and of the substitution of a better water for the impure waters drawn from the Thames, at points where its stream was polluted by London sewage. The decisive improvement of South London, it will be seen in the Table, became manifest in 1856.

Some disappointment may be felt that the mortality of London, which should be below 20, has not descended permanently to that rate: the reason is too obvious, for the water supply is still drawn from the stream of the upper Thames, which drains a populous basin, and receives much of its impurities. Then it has been shown that although the main sewers have been well laid, the branch sewers, under the district boards, are still imperfect; they are in places ponds of impurities, as Dr. Hardwick and others have discovered by inspection, even in the West End of London. Fine old houses have had vast cesspools laid in the præcloacal age; and those cesspools in many cases remain undisturbed, exhaling their fumes through the air. The London Building Act, in some respects worse than the Sanitary Acts applying to country districts, has no adequate clauses to provide for the effectual purity of the new dwellings erected. There is still a want of thoroughness in the London sanitary work, accounting fully for the higher rates of mortality, which look unfavourable by the side of a high standard of salubrity, but favourable as compared with the rates of other cities left in a worse state.

In the year 1872 the annual rate of mortality fell to 21·5 per 1000: this contrasts favourably not only with 1849 and 1854, when the annual rates were, owing to cholera, 30·1 and 29·4, but with every year except 1850, after the cholera had swept off the feeble, when the rate was 21·0. The causes of this better state of things can be most conveniently discussed in the Annual Report, for they were in general operation throughout the kingdom.

In the meantime, London may accept the improvement in the vitality of her population as of good augury.

The 20 Great Cities and Towns.

Their mortality in the aggregate is above the London standard; they lag, as might be expected, somewhat behind the capital, and their mortality only fell in 1872 to 24·3, which was the rate in London during the twelve years 1860–71. These 20 cities are arranged below in the order of their mortality during the last five years. It is right to bear in mind that the three cities of highest mortality are the densest. Density raises the mortality through the condensation of impurity; the quantity of air respired being equal in two populations, the quantity of impurity taken in bears a certain proportion to the strength of the noxious mixture. While density of population does not, therefore, necessarily, it does practically imply density of zymotic impurity in most towns; and a higher resulting rate of mortality. Precautions are required in proportion to density in order to obviate its evils.

20 GREAT CITIES and TOWNS of the KINGDOM arranged in the ORDER of MORTALITY.

AVERAGE ANNUAL DEATH-RATE per 1000, 1868-1872.			
Portsmouth - 21·9	Hull - - 25·4	Sunderland - 26·8	Newcastle-on-Tyne 27·6
Bristol - - 23·8	Edinburgh - 26·0	Oldham - - 27·0	Salford - - - 27·9
Birmingham - 24·0	Dublin - - 26·0	Leicester - - 27·3	Manchester - - 30·9
Nottingham - 24·9	Bradford - - 26·4	Sheffield - - 27·5	Glasgow - - 31·1
Norwich - - 25·2	Wolverhampton 26·5	Leeds - - 27·6	Liverpool - - 31·3

The Authorities of the 20 great cities deserve applause for what they have done or attempted; but they are far from having attained the stage of the traveller who can rest and be thankful. The deaths in 1872 were in excess by 53,886—more than 1000 a week—of the healthy standard; at the rate of 17 to 1000 inhabitants, the deaths would have been 125,682; whereas 179,568 deaths were registered in the year: and so long as the wails of thousands of children, of the young cut off in the bloom of life, of fathers dying of fever or killed outright by violence, of mothers perishing in childbirth, of men who never attain the fulness of age, are heard, mayors and town councillors should give themselves no rest until they have done their utmost by sanitary precautions to save life, and to render the respective populations under their rule vigorous. They are now on their trial. They will be questioned at the bar of public opinion. They are about to appoint health officers; will they carry out their recommendations, backed as they are by the experience of the navy and army, as well as by the whole series of national civil returns, showing how invariably sweet air, pure water, cleanliness, and hygienic measures of every kind, are attended by health and strength, and their absence by death, disease, and disability?

THE 50 LARGE TOWN DISTRICTS.

The mortality of these town districts, 24·8 in the year 1871, was at the rate of 23·8 in 1872; higher, in the aggregate, than the mortality of London, but somewhat lower than the mortality of the great cities. They follow arranged in groups according to the order of mortality:—

ANNUAL RATE of MORTALITY per 1,000 Persons estimated to be LIVING during 1872 in 50 LARGE ENGLISH TOWNS; ranged in the order of the rates from the lowest to the highest.

Cheltenham 17·6	Birkenhead - 20·5	Plymouth - 22·3	Carlisle - - 24·6	Wigan - - 26·6
Hastings - 17·8	Derby - - 20·5	Lincoln - - 22·4	Stoke-upᵒⁿ-Trent 24·8	Macclesfield - 26·6
Maidstone - 18·0	Shrewsbury 20·6	Cardiff - - 22·5	Dover - - 25·2	Ashton-unᵈᵉ-Lyne 26·6
Chatham - 18·8	Brighton - 20·9	Bath - - 22·7	Blackburn - 25·5	Merthyr Tydfil - 26·7
Reading - 19·2	Chester - 21·0	Yarmouth - 22·7	Stockport - - 25·8	Exeter - - - 26·8
Oxford - - 19·3	Swansea - 21·3	Halifax - - 22·9	Gateshead - 25·9	Preston - - 27·9
Colchester - 19·3	Worcester - 21·4	Newport (Mon.) 23·0	Bury - - 26·3	Walsall - - 28·9
Southampton 20·3	Coventry - 21·8	Rochdale - 23·4	EastStonehouse 26·3	Northampton - 29·7
Devonport - 20·4	Gosport - 21·8	Ipswich - - 24·0	South Shields - 26·4	Bolton - - 30·0
Cambridge - 20·4	Huddersfield 22·2	York - - 24·2	Tynemouth - 26·4	Dudley - - 32·3

Preston, Walsall, Northampton, Bolton, and Dudley enjoy here a painful pre-eminence, which cannot fail to awaken the attention of their respective authorities.

THE 11 GREAT FOREIGN CITIES.

Health is of almost equal importance to all mankind, and efforts have been made here to induce the authorities of the great cities of the world to record observations as in London on their state as shown by the returns of deaths and fatal diseases compared with the population living. These efforts have been successful in the Capital cities of all the great

Powers except Russia, whence returns are expected shortly from both St. Petersburg and Moscow, which have excellent municipal organisations.

New York sends returns quite regularly. The authorities of Bombay, Madras, and Calcutta deserve great credit for the efforts they are making to compete in the race of improvement with the advanced cities of Europe.

POPULATION, DEATHS, and the DEATH-RATE in 11 FOREIGN CITIES, 1872.

NAME.	POPULATION.	DEATHS.	DEATH-RATE.
PARIS	1,851,792 (1872)	40,479	21·9
BRUSSELS	185,000 (estim^{d})	4,176	22·6
VIENNA	644,356 (1872)	20,506	31·8
BERLIN	828,000 (1872)	26,706	32·3
ROME	244,484 (1872)	9,223	37·7
FLORENCE	167,093 (1872)	5,815	34·8

NEW YORK	942,292 (1870)	32,474	34·5
BOMBAY	646,636 (1872)	18,906	29·2
MADRAS	397,552 (1872)	13,911	35·0
CALCUTTA	477,600 (1872)	11,947	25·0

Remarks on the Meteorology of 1872. By James Glaisher, Esq., F.R.S., &c.

The year 1872 was remarkable :—1st for the extraordinary atmospheric depression in the month of January, and the long continued period of depression in the last four months of the year; 2ndly for the lengthened period of warm weather which characterised the first three months of the year, and 3rdly for the remarkable excess of rain-fall during the last quarter of the year.

In Table 40 (pages xcvi and xcvii) the annual means of the several elements for the stations between Guernsey and North Shields are given.

The following remarks with regard to excess or deficiency of atmospheric pressure, temperature, and rain-fall are primarily derived from the observations at the Royal Observatory, but they may be taken as applying generally to the whole country.

Atmospheric pressure.—The reading of the barometer decreased from 29·9 in. on the 1st of January to 28·87 in. by the morning of the 5th, and the mean reading for the 5th was no less than eight tenths of an inch below the average for the day. From the 6th to the 13th the changes were numerous, but on the 14th an increase to 29·9 in. occurred, followed by a steady decrease to 28·9 in. by the 18th. With slight exceptions the mean readings were below their average values from this day until the 3rd of April, and on some days the departures were large especially on the 23rd and 24th of January, when the amounts were 1 in. and 1·1 in. respectively. The minimum value on the 24th of January, viz., 28·21 in. is remarkable as being lower than any since 13th January 1843, when 28·096 in. was recorded. On 24th December 1821 a still lower value was recorded, viz., 27·89 in., and other instances of low readings have been: 6th March 1783, 28·22 in.; 17th December 1809, 28·20 in., and 23rd November 1824, 28·37 in.

On 3rd April, a decided increase set in, and by the 6th 30·3 in. was reached. From the 7th to the 15th high values were generally recorded, but on the 16th a downward tendency was shown which continued until the 21st, when the reading was 28·9 in., the minimum value for the month. From this date with slight exceptions increasing values were recorded to the end of the month.

During the months of May and June the movements were numerous but not generally of very great magnitude, whilst in July the readings were very steady and the range unusually small. In the earlier portion of August larger movements were experienced, the general tendency being to decrease till the 7th when the minimum for the month occurred. After this date increasing values were recorded, the absolute maximum being reached on the 28th. In the last four months of the year the readings were remarkably low, the mean values for each month being respectively 0·13 in., 0·17 in., 0·25 in. and 0·40 in. below the corresponding averages. It is very rarely that so long a period of continuous depression is experienced. The mean value for these months is 29·535 in., and there has been no instance of any approach to such low readings for so lengthened a time except in the year 1841 when the mean for the corresponding period was 29·576 in.

Temperature.—The warm weather which set in on the 13th December 1871, continued with very few and very slight exceptions till the 18th of March 1872. The mean temperature of the 97 days ending on this day was more than 5° in excess as compared with the average, the direction of the wind during this time was mostly from S.W. This warm period of 97 days has, however, been exceeded in length in a few cases. For

instance in 1821 a warm period set in at the end of October and continued until the end of April 1822. In 1833 a warm period began on October 21st, and continued till 16th March 1834. In 1858 a warm period set in on December 18th, and extended to 11th April 1859. In 1862 a warm period commenced at the beginning of December and continued to the end of March 1863. The mean temperature of the five months ending March 1822 was 44°·6, for those ending March 1834 was 43°·5, and for those ending March 1872 (owing to the severity of the cold in November and December 1871) it was 41°·3 only. The mean temperature of four months ending March :—

In the year 1822 was	43°·8.	In the year 1863 was	42°·8.
„ 1834 „	43°·3.	„ 1872 „	42°·2.
„ 1859 „	42°·7.		

So that, remarkable as the first quarter of the year 1872 had been for its long continued warmth, there were no less than four instances of a more lengthened period, two of which, viz., in the winters of 1821–1822, and 1833–1834 were of nearly five months duration. The mean value for the three months January to March alone was for 1872, 43°·6.

The corresponding mean in	1779 was	42°·4
„	1819 „	41°·4
„	1822 „	43°·5
„	1834 „	42°·9
„	1846 „	43°·6
„	1849 „	41°·9
„	1851 „	41°·9
„	1859 „	43°·3
„	1863 „	42°·6

It follows therefore that throughout the period of 100 years the warmth of the first quarter of 1872 has been but once equalled, viz., in 1846, and has never been exceeded, but in two instances there have been closely approximate values, viz., in the year 1822 and 1859. From the end of March until the first week of May the weather was very changeable with alternate periods of warmth and cold of short duration, the warm periods generally preponderating both in duration and amount. From the 6th of May to the 12th of June the weather was generally cold and cloudy. On June 13th a warm period set in, and for some days the weather was fine, bright, and hot, with heavy thunderstorms on June 17th, 18th, and 19th principally over the Northern and Midland Counties. A long period of changeable weather now ensued which continued until the middle of August, the weather then improved somewhat, about the 16th, but became broken towards the end of the month, and was changeable till the end of the first week in September, with very mild, and almost summer like temperature ; in the second week the weather was unsettled, particularly in the north, where much rain fell, whilst in the south it was finer with but little rain, and the mean daily excess of temperature for the 33 days ending September 17th was nearly 4°.

From September 18th to October 24th, cold, ungenial weather prevailed, although S.W. and W.S.W. winds predominated, and the average daily deficiency of temperature was about 4°. A warm period set in on the 25th October and continued till November 9th, with an average excess of $3\frac{1}{2}^{\circ}$, and this was followed by a steady cold period from November 10th to 19th with the wind from N. and N.E. and an average deficiency of 5°. On November 20th a period ensued of as warm weather as the preceding period was cold, lasting until December 3rd, after which occurred variable periods until the 19th but generally a deficiency of temperature was more strongly marked, but on the 20th of December a remarkably warm period set in, which continued until the end of the year and yielded an average daily excess of more than 9°.

Rain-fall.—The fall of rain in January was large, being as much as 1·7 in. in excess, but in February less rain than the average fall was measured to the extent of 0·8 in. In March the amount again exceeded its average but only to the amount of 0·5 in., and in the next three months the falls were slightly in defect in April and June, but in excess to almost the same amount in May. In July the amount was nearly the same as its average, in August slightly in excess, but in September as much as 1·0 in. in defect. The rain-fall, however, in these months was much heavier in the Northern than in the Southern counties and harvesting was frequently interrupted both in August and September by heavy rains and frequent thunderstorms, so that by the end of September very little progress had been made either in the north of Ireland or in Scotland, where operations were still further checked by sleet and snow. In the next three months the frequency of rain was a most remarkable feature. During this period it fell on no fewer than 67 days, a larger number than had been previously experienced at Greenwich since the year 1815. The total amount was large, amounting to 11·32 ins., a quantity no less than 4·2 ins. in excess of the average. In 58 years this fall has but once been exceeded in the corresponding three months, viz., in 1821 when it was 11·47 ins. or 0·15 in. greater; and back to 1815 there is only one other year in which a greater quantity than 11 ins. was recorded, viz., in 1852, 11·13 ins.

This unusual frequency of rain was general over the country. At Stonyhurst, rain fell on 89 days, and at Guernsey on 80 days whilst the general average over the country was 67 days. The amount at Guernsey was very remarkable being as much as 25¼ ins.

The mean amount from all the stations was 13·97 ins. being more than double the fall in the corresponding period of 1871, which was 6·09 ins.

The total rain-falls for the year ranged from 65·4 ins. at Allenheads, to 28·5 ins. at Royston, and the number of rainy days from 319 at Stonyhurst, to 156 at Holkham.

PRELIMINARY TABLES.

TABLE 1.—Estimated **Population,** and Number of **Marriages, Births,** and **Deaths** registered in **England** in each of the Thirty-five Years **1838–72.**

YEARS ended Dec. 31st	Estimated POPULATION in ENGLAND in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.
1838	15,287,699	118,067	236,134	463,787	342,760	121,027

Mean - -	16·5	33·8	22·3	61	30	45

NOTE.—The Table may be read thus:—In the year 1838 to every 10,000 persons living there were 154 persons married, 303 births, and 224 deaths; the number of persons living to every person married, birth or death, was 65, 33, and 45 respectively. The rates in this Table have been calculated upon the estimated populations given in Table 1, but no corrections have been made for the difference between an ordinary year of 365 days and leap year.

TABLE 3.—**Marriages** in **England** in each of the Thirty-two Years **1841–72**; those solemnized according to, and not according to, the Rites of the Established Church; with other details respecting the Marriages in the Churches of the Established Church.

Years ended 31st December	Total Marriages.*	According to the Rites of the Established Church.						Not according to the Rites of the Established Church.

Mean Annual Rate per 1000 in each quarter - -					13·7	16·8	15·9	19·6

Note.—The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For this inequality a correction has been made in the above calculations.

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living, 124 persons were married.

TABLE 6.—**Marriages** in **England**. The Proportion per Cent. of **Minors** of each Sex, of Males and Females who **signed the Register with Marks,** and of Persons who were **Widowers** or **Widows,** in each of the Thirty-two Years **1841–72.**

Years ended 31st December	To 100 MARRIAGES.

1872 -	11,231,389	11,836,496	22·7	20·0	108	113
Average proportion in 35 years, 1838-72 - -			23·3	21·4	104	109

The Table may be read thus:—In the year 1838 to every 1000 males living there were 23·4 deaths; to every 1000 females living there were 21·5 deaths; and to each 100 females who died there were 105 deaths of males. The last column shows the *relative* mortality of *males* and *females*; and that out of equal *numbers living* the deaths of males were as 109 to every 100 deaths of females in 1838.

TABLE **19.—Deaths** of **75 Persons** RETURNED as **Aged 100 Years and upwards** in ENGLAND and WALES during the Year **1872.**

Note.—The Table may thus be read:—Of each 1000 male children living under five years of age, 72·5 died in the 35 years 1838-72; in the five years 1841-45 this proportion averaged 69·0 per 1000; and in the five years 1866-70 it was 73·0.

* The population used in these calculations is deduced from the ascertained rates of increase observed in the 30 years 1841-71 (*see* Table 61, pp. cxiv-cxv), distributed in the several groups of ages according to the proportions found to prevail at the four Censuses.

Mean Annual Rate per 1000 in each Quarter -					24·9	22·1	20·7	21·9

* These rates may thus be read, without reference to the decimal points:—In the March quarter of the year 1838, to 10,000 of the population 262 deaths were registered. A correction has been made in the calculations for the inequality in the number of days in the different quarters, *see* note to Table 5.

TABLE 27.—**Proportional Number** of **Deaths** in **England** in each **Quarter** to **1000 Deaths** in the **Average Quarter*** of each of the Thirty-five Years **1838–72.**

NOTE.—The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts in the last column approximately represent, are Municipal or Parliamentary.

* The figures in this column are the unrevised numbers enumerated at the Census in April 1871, raised to the middle of 1872 by the addition of 1½ times the annual rate of increase which prevailed between 1861 and 1871. A decrease of population between 1861 and 1871 was shown in Gosport, Devonport, Dudley, Coventry, Macclesfield, and Ashton-under-Lyne; in these instances the enumerated population has been proportionally depressed.

† These rates of mortality have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the District or Sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situated outside that area.

TABLE **34.—Population; Births** and **Deaths; Annual Birth** and **Death Rates; Mean Temperature** and **Rainfall,** in the Year **1872,** in LONDON and TWENTY other LARGE TOWNS of the UNITED KINGDOM.

* The figures in this column, excepting those for London and Dublin, are the *unrevised* numbers enumerated at the Census in April 1871, raised to the middle of 1872 by the addition of 1¼ times the annual rate of increase which prevailed between 1861 and 1871. The estimate for London is based upon the *revised* Census number for 1871, and in the case of Dublin the population is taken as stationary at the *revised* number then enumerated.

TABLE **35.—LONDON.—Deaths in Public Institutions** in the 52 or 53 Weeks of each of the Thirteen Years **1860-72.***

Average Number living to One Death annually (1840-72) . . .	41	44	44	40	38	41

NOTE.—The populations upon which these rates of mortality have been calculated are deduced from the numbers enumerated at the four Censuses of 1841, 1851, 1861, and 1871. The deaths used are those registered in the complete years.

Certain alterations affecting the West and Central groups of districts were made in the year 1868, but corrections have not been made in the results given in this Table for years prior to 1861.

Total	1,456,647	4,905,262	1,016,526	182,850	7,561,285

Average annual emigration from the United Kingdom — From 1815 to 1872 - 130,367; For the 10 years ending 1872 - 230,223

* The Customs' returns do not distinguish the emigration to Australia during these 10 years, but it appears from other sources that the emigrants who went to this country were in 1821, 320; in 1822, 875; in 1823, 543; in 1824, 780; and in 1825, 458 persons. These numbers are not included in the totals of this Table.

* The deaths of soldiers, marines, and seamen from the Royal Navy, who were passengers in British Merchant Ships, were 33 in 1856, 59 in 1857, 156 in 1858, 196 in 1859, 196 in 1860, 69 in 1861, 122 in 1862, 116 in 1863, 96 in 1864, 140 in 1865, 134 in 1866, 97 in 1867, 81 in 1868, 51 in 1869, 27 in 1870, 24 in 1871, and 1 in 1872. The number is 1,648 in seventeen years, which, if added to the 9,440 above, makes 11,088, the total number of deaths of British subjects at sea in 1856-72, exclusive of those of merchant seamen. The Entries in the "Marine Register" of Births occurring in 1872 were but 73, and of Deaths 219.

In the 21 years 1852–72	3,844,345	81,515	21·2

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return *includes seamen dying ashore in foreign parts*, whose wages and effects are delivered to the consuls or officers of the hospitals on their discharge from their ships.

If a *seaman* die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a *passenger* die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given, and in the accompanying tables the births and deaths are classed according to the years in which they occurred. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE **60.**—RETURN of the AGES, RATING, and CAUSES of DEATHS of **4,123 Seamen** reported to the BOARD OF TRADE as having died in the **British Merchant Service** in the Year 1872. (*Parliamentary Return, No.* 216, *Session of* 1873.)

TABLE 62.

ESTIMATED POPULATION OF THE UNITED KINGDOM,

(including ISLANDS in the BRITISH SEAS)

with Army, Navy, and Merchant Seamen abroad belonging thereto.*

Middle of the Census Years.	PERSONS.	MALES.	FEMALES.
1801 -	16,302,410	8,096,082	8,206,328
1811 -	18,532,522	9,194,348	9,338,174
1821 -	21,300,573	10,519,256	10,781,317
1831 -	24,423,588	12,004,025	12,419,563
1841 -	27,077,095	13,325,889	13,751,206
1851 -	27,764,034	13,656,998	14,107,036
1861 -	29,358,927	14,397,427	14,961,500
1871 -	31,914,985	15,622,725	16,292,260

* In estimating the number of men in the Army, Navy, and Merchant Service abroad, the proportion belonging to foreign countries and the colonies has been excluded. In 1811 the troops and seamen were 640,500, but as this number included natives of colonies and foreign parts, only 502,536 were taken.

The above numbers have been deduced by adding to the estimated population of the United Kingdom, as given in Table 61, the enumerated population of the Islands in the British Seas, and the Army, Navy, and Merchant Service abroad (*see* p. vii. of Vol. I. Census of England and Wales, 1871).

NOTE.—Cholera is given as being chiefly the cause of the high rate of mortality in Denmark in 1853; in Sweden in 1853, 1857, and 1866; in Austria in 1866; in Prussia in 1866; in the Netherlands in 1859 and 1866, where also small-pox prevailed in 1871; and in France in 1865 and 1866. War contributed to the same end in Denmark in 1850 and 1864; in Austria in 1866; in Prussia in 1866, 1870, and 1871; and in France in 1870 and 1871.

M. V. Falbe-Hansen remarks that an addition of territory containing about 8000 population was made in 1864, and the facts relating to these are shown in this Table from 1860.

* The populations for these years were enumerated at the respective Censuses.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

NOTE.—Previous to 1st January 1860 children who died within 24 hours after birth were counted as still-born.

TABLE **67.—Sweden. Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1850** to **1872.**

(Supplied by Dr. Berg, Chief of the Statistical Department of Sweden.)

1872	4,250,412	29,470	58,940	126,988	68,802	13·9	30·0	16·3

* The populations for these years were enumerated at the respective Censuses. Dr. Berg attributes the decrease observable in the population in the years 1868 and 1869 to failure of crops and consequent emigration.

† Cholera was epidemic in the years 1853, 1857, and 1866.

TABLE **68.—Austria. Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1853** to **1872.**

(Furnished by Dr. A. Ficker, the Chief of the Statistical Department of Austria.)

NOTE.—The Returns for Austria include Hungary, Croatia, Slavonia, and Transylvania from 1853 to 1862 inclusive; since 1862 the returns exclude those portions of the empire. Until 1864 the States of Italy were included; since 1864, however, they are excluded.

* Dr. Ficker attributed the excessive mortality in the year 1866 to Cholera and the war.

NOTE.—The Statistical Department of France favoured the Registrar-General with the returns for the years 1853-61 and for the year 1866. The population in the four years 1862-65 and in the years 1867-69 was estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The estimates for 1870 and 1871 have been supplied by the French Government. The returns since the year 1860 include the three newly annexed departments. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which was their last domicile. The Statistical Bureau revised the Population and the numbers of Marriages, Births, and Deaths for the years 1853-71.

* Cholera was prevalent in 1865-66, and war raged in 1870 and 1871.

TABLE **72.—Spain. Population; Number,** and **Proportion** per 1000, of **Persons Married, Births** and **Deaths** in each of the Ten Years **1861** to **1870.**

1871*	—	—	—	—	—	—	—	—
1872*	—	—	—	—	—	—	—	—

NOTE.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for the Years subsequent to 1861 has been deduced from the Excess of Births over Deaths in each Year. This method of estimating the population is sanctioned by the Junta General de Estadistica at Madrid. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* The figures relating to 1871 and 1872 have not yet come to hand.

1872‡	—	—	—	—	—	—	—	—

* The decrease of marriages in 1866 may be attributed to the law which then came into operation removing the civil registration from the parochial authorities to the communes; there had been a marked increase in the previous year resulting from a wish to evade the law about to come into operation. Doubtless many of the marriages solemnized in the churches during 1866 escaped registration.

† The figures for 1870 were supplied by Signore L. Bodio, chief of the Statistical Department in Italy.

‡ The figures relating to 1872 were not received in time for publication.

TABLE **74.—Changes** in the **Constitution** of the **Superintendent Registrars' Districts** and **Registration Sub-districts** during the Year **1872.**

[The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*. The Figures in Cols. 1. and 4. show the number of the District.]

Superintendent Registrar's DISTRICT and Registrar's *Sub-district* from which a Transference was made.	Date of Change.	Place and Population (1871) transferred from the District in Column 1 to the District in Column 4.	Superintendent Registrar's DISTRICT and Registrar's *Sub-district* to which an addition was made.

No Change was made during the Year 1872 in the Constitution of Registration Districts or Sub-districts.

The following alterations were made in the names of the under-mentioned Sub-districts of ROCHDALE, No. 470:

Castleton Without *renamed* Castleton Further.
Castleton Within „ Castleton Nearer.

* The *Registration Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Counties (proper).

† These figures have been furnished to the Registrar General by the Ordnance Survey Department; they do not include space occupied by foreshore or tidal water of rivers and creeks.

the Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1872.

‡ Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions: in these cases the two ceremonies are entered as two marriages. This column also includes 58 cases of marriage after divorce, viz., 22 *divorced men* who married spinsters, 21 bachelors who married *divorced women*, 4 *divorced men* who married widows, 9 widowers who married *divorced women*, and 2 *divorced men* who married *divorced women*. For the districts in which these marriages took place, see Table 10, p. lxvii, of Report.

* The *Registration Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (*proper*) are included entirely in that County in which either the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

† These figures have been furnished to the Registrar General by the Ordnance Survey Department; they do not include space occupied by foreshore or tidal water of rivers and creeks.

‡ Some of the births—especially of illegitimate children in London and large towns—escape registration.

* The *Districts* are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are generally identical with the Poor Law Unions of the same names; they are arranged according to their local position under the Registration Counties. The presence of Institutions in any District is indicated in this column of the Table by *H* for Hospital or Infirmary, *L* for Lunatic Asylum, and *w* for Workhouse Establishment receiving inmates from other Districts than the one in which it stands; and repetitions of these letters show the number of such Institutions in any District.

† Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated.

II.—SOUTH EASTERN COUNTIES.—MARRIAGES, BIRTHS, AND DEATHS, 1872—DISTRICTS—*continued*.

* Sub-districts are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (−) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated. The Excess of *Deaths* over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1872 are given on pages 99–117.

DEATHS IN PUBLIC INSTITUTIONS,

1872.

THE FOLLOWING PAGES contain the numbers of deaths registered during 1872 in most of the public institutions of England. These figures will afford the means of correcting the mortality of districts and sub-districts where affected by the situation therein of these institutions, through the deaths recorded in them. The following list includes all Workhouses, Hospitals, Infirmaries, and public Lunatic Asylums, while prisons, almshouses, schools, private lunatic asylums and benevolent asylums, are excluded. The list, as settled, includes 1245 institutions; of which 712 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 450 Hospitals or Infirmaries; and 83 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included.

Deaths registered in the principal **Public Institutions** of **England** in the **Year 1872.**

* Seven deaths occurred during the year in the Brislington House private lunatic asylum.
† This hospital is situated partly in Somersetshire and partly in Gloucestershire. As an institution it is counted as belonging to the latter county, in which the larger portion stands; the deaths, however, are referred to the county in which they actually occurred.
‡ Four deaths were registered during the year in the Longwood House private lunatic asylum.
§ Four deaths occurred during the year in the Barnwood House (private) Hospital for the Insane.

Deaths registered in the principal **Public Institutions** of **England** in the **Year 1872**—*continued.*

NOTE.—The Table may be read thus: Of the 255,135 deaths of Males, 68,387 were those of children under 1 year of age; 20,105 those of the age 1 and under 2 years; 9,650 of the age 5 and under 10 years; 6,642 of the age 15 and under 20 years, and so on.

* This column includes the deaths of 24 males registered as aged 100 years and upwards; namely, 9 aged 100, 5 aged 101, 2 aged 102, 4 aged 103, 1 aged 104, 1 aged 105, 1 aged 107, and 1 aged 111 years. The districts in which these deaths occurred and the cause of death in each case are stated in Table 19, page lxxvi, of Report.

The *Causes of Death* in England and in London, in combination with the Ages at Death, are given at pp. 144-159.

ENGLAND.—SUPPLEMENTARY TABLE of the

[The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all Diseases are classified in the Tables of Causes of Death, pp. 146–149, under 116 heads; some of these heads, however, include groups of diseases which are very distinct from one another, but which either are fatal to only a *few persons*, or are often confounded with other diseases. The rule has been to refer the distinct diseases to heads under which the cases were so numerous, that the additional numbers

CAUSES of DEATH at different Periods of Life, in the Year 1872.

would not materially interfere with the calculated proportions. Where it is desired, partial correction, however, can be made by means of the following Supplementary Table, containing the deaths from many distinct diseases, such as chicken-pox, mumps, &c. &c., which in the preceding Tables, have no separate classification, and also many of the deaths from various *forms* of disease (such as softening of the brain, *necrencephalus*, deaths from which are included under "*Brain Disease, &c.*") which in some cases are returned under other heads.

APPENDIX.

LETTER to the REGISTRAR GENERAL on the CAUSES of DEATH in ENGLAND, by W. FARR, Esq., M.D., F.R.S.

YEAR 1872.

SIR,

DEATH is the inevitable termination of human life, and is physically only one of the changes of the forces that animate the body in its evolution from a living point to final dissolution into its elements. Its causes are not unimportant even when life is protracted to its extreme limit of a hundred years; but their importance is enhanced incalculably by the fact that life is cut short in childhood and manhood by mechanical injuries, by fire, by water, by poison, by famine, by plague; by zymotic, constitutional, local diseases; and by various agents which modern science has shown are under control.

Homicide is the most dreaded cause of death; it is a cause which society in its earliest stages undertook to limit by punishing menslayers, and by stopping the arm of private vengeance. The primary aim of judicial proceedings was the protection of life against criminals; and in England this gave rise to the coroner, whose office consists mainly, Blackstone says, "in inquiring, when any person is slain, or dies suddenly, or in prison, concerning the death," and committing any one found guilty by the inquest for further trial.* The number of inquests held in the year was 25,705, and the verdicts are thus classified in the Judicial Statistics:—

CORONERS' RETURNS OF INQUESTS, 1872.
(*See* Judicial Statistics, 1872, p. xxii.)

VERDICT.	TOTAL.	Males.	Females.
TOTAL INQUESTS	25,705	18,046	7,659
Murder	257	130	127
Manslaughter	176	120	56
Justifiable homicide	2	1	1
Suicide or self-murder	1,455	1,057	398

* See Jarvis on Office and Duties of Coroner, 3rd edition; and Baker's Law of Coroner.

The cost of the inquests was 78,535*l.*, or 3*l.* 1*s.* 1*d.* an inquest; and this is exclusive of the value of the time of the twelve jurymen summoned to each inquest.

It will be observed that the verdict of murder was only returned in 257 cases, of manslaughter in 176; the convictions for murder on trial were 30, and the executions in the year 14.*

The intention of the inquest was to discover crime, with a view to its punishment and prevention; and in the imperfect state of science at that time "sudden death" was fixed on as a primâ facie ground for inquiry. Now it is well known that many spontaneous diseases take away life suddenly; and that in some of the most atrocious murders by arsenic, by antimony, and by cruelty, death is slow in its approaches. The mere fact that death is sudden is a ground for medical inspection, but not necessarily for an inquest; and there are many violent deaths of which a medical inspector may ascertain the causes without moving the apparatus of the inquest, there being no more suspicion of crime in such cases than there is in deaths from fever, pleurisy, or consumption.

With the extension the inquest had attained it left the causes of about 466,560 deaths—of 95 per cent. of the total number in the year—unexplored; yet it is now ascertained that vast numbers of these deaths are referable to negligence; or to causes which admit of removal by hygienic treatment, and by sanitary regulation. To take one class of causes only found to prevail with the greatest intensity in the dense population of towns,—it can be shown that with the present distribution of population by age, the mortality in many healthy districts is below, and in none above, 17 annual deaths to 1000 living: and at this rate the deaths in England and Wales would have been 392,151 in the year. The actual deaths registered were 492,265. Hence it follows that at least 100,114 deaths were the results of causes not everywhere,—not necessarily in such fatal operation. The mean lifetime of people living in the least unhealthy districts of the kingdom is 49 years; in all England 41 years; thus life is abridged by full 8 years. The half of an English generation is cut off before the forty-sixth year is attained; and we have seen how small a fraction of the loss of life is the result of intentional homicide. After judicial inquiry, only 125 deaths are referred to this head, whereas full 100,000 deaths due to violations of natural laws call for inquiry, with the prospect of success in the discovery of causes still prevailing, which are as fatal as the serpents, wild beasts, and savage criminals of past ages.

The attempt to extend the inquiry into the causes of death was made in London in the sixteenth century, after the College of Physicians was founded by Linacre. The fatal plagues impressed the minds of statesmen, but to one of the companies of the city of London is due the credit of publishing the first weekly bills of mortality. It was not, however, until 1837 that the Inquiry into the cause of death was instituted in every case of death under the Registration Act. Then the Registrar General engaged the medical colleges to afford him their assistance on the ground of its scientific utility, the "Cause of Death" having been inserted in the schedule of the Bill by the House of Lords, and accepted by the House of Commons, after its importance had been urged by no less a body than the British Association. A Certificate Book first issued by the Registrar General in 1845, to legally qualified medical practitioners, a statistical nosology, and a letter to the coroners completed the administrative machinery under which the results of the inquiry into the causes of death are recorded.

Without entering into metaphysical disputes on causation, it is evident, that to be of practical use, the cause of death recorded must be as clearly defined as possible, and that the verdicts of juries should express the exact essential facts, and not vague generalities.

* *See* note, p. 203.

There were 790 deaths returned simply as by burns, and as the way in which the burns were wrought is not stated, it is not possible to suggest practical remedies. But 16 deaths by burns are referred distinctly to fires, and this implies that some such deaths may be avoided by preventing fires, by extinguishing fires, by fire-escapes, and by other means. Again, 373 deaths by burns are referred to the clothes taking fire, and this at once suggests that such deaths may be diminished in number by caution in approaching open fires, by fire-guards, and by the use of less combustible dresses than those in common use. And this is confirmed by the discovery that females, whose dresses are the most combustible, are burnt to death in greater numbers than males; and that of 152 males so burnt to death 131 were children under ten years of age, when the clothes of boys are often as combustible as those of girls. The old loose verdict of "drowning" without distinction is of little practical avail, but the knowledge of the circumstances at once suggests a variety of preventions. Thus, while it is stated that 242 males and 2 females were drowned when bathing, 68 males and 2 females by falls from ships, 102 males and 5 females by shipwreck, 4 males in skating, 63 males and 6 females by the upsetting of boats, we cannot but regret that 2854 deaths are registered as found drowned, or drowned, without any further particulars available for analysis. The verdict "suicide" points out a criminal act, but it does not display important links in the chain of causation; for to say nothing of controlable passions, there are the seductive temptations offered by instruments of death at hand. Take out of easy reach the cartridge, the razor, the poison; and the number of suicides from these causes declines. The instrument, therefore, as well as the agent is to be recorded under the cause of death. In deaths by wounds the part wounded is of evident importance; for a gun shot, for example, fatal in the heart or the brain, may be of little consequence in other parts of the body: the wound is only directly fatal in some important organ, which should be specified in the return, as the wound in that organ is the final cause of death. The *place* and the exact *time* in which the fatal injury was inflicted should be noted; this is important in such cases as street accidents, where the sufferer is carried away from the spot and dies elsewhere.

In fine, as is shown in the "Observations on the Registration of the Causes of Violent Deaths,"—

"Care should be taken that every return of a violent death answers the three-fold inquiry involved under 'the Cause of Death;' *namely*,—

(1.) Was the deceased killed by his own act, or by that of other persons, and in what circumstances?

(2.) What were the means, instruments, or things by which the fatal injury was produced?

(3.) What was the nature of the mortal injury, and what time elapsed before death?

Or the return should have on the face of it an explanation of the omission.

At the same time the statement should be made as concise as it is clear and comprehensive: no vague or unnecessary word should be inserted."

The inquest is a most valuable institution, and under the intelligent coroners of the country we may hope to see henceforward the true causes of the deaths into which they inquire set forth in systematic completeness, as under the Act 6 & 7 Will. 4. c. 89. they have the power to call in a medical expert, and to direct him to perform a post-mortem examination, with or without a chemical analysis. The new Registration Act relies entirely on the jury, instructed by the coroner, for a return of the cause of death whenever an inquest is held.

Hitherto the grant of certificates of the cause of death by the registered medical practitioners of England has been purely voluntary, and the Registrar General has to thank the medical profession for the hearty co-operation he has received from them in the administration of the Act. In the Amendment Act of 1874 (37 & 38 Victoria) the Legislature has inserted the subjoined clauses:

Certificates of Cause of Death.

Regulations as to certificates of cause of death.

20. With respect to certificates of the cause of death, the following provisions shall have effect:

(1.) The Registrar General shall from time to time furnish to every registrar printed forms of certificates of cause of death by registered medical practitioners, and every registrar shall furnish such forms gratis to any registered medical practitioner residing or practising in such registrar's sub-district:

(2.) In case of the death of any person who has been attended during his last illness by a registered medical practitioner, that practitioner shall sign and give to some person required by this Act to give information concerning the death a certificate stating to the best of his knowledge and belief the cause of death, and such person shall, upon giving information concerning the death, or giving notice of the death, deliver that certificate to the registrar, and the cause of death as stated in that certificate shall be entered in the register, together with the name of the certifying medical practitioner:

(3.) Where an inquest is held on the body of any deceased person a medical certificate of the cause of death need not be given to the registrar, but the certificate of the finding of the jury furnished by the coroner shall be sufficient.

If any person to whom a medical certificate is given by a registered medical practitioner in pursuance of this section fails to deliver that certificate to the registrar, he shall be liable to a penalty not exceeding *forty shillings*.

And under the penalty clause (39) it is enacted that, "Every person "who refuses or fails without reasonable excuse to give or send any cer- "tificate in accordance with the provisions of the said Acts (Registration "Acts, 1836 and 1874) shall be liable to a penalty not exceeding forty "shillings for each offence."

Thus under the Amendment Act every registered medical practitioner in England is bound, under penalty for refusal, to give "a certificate stating to the best of his knowledge and belief the cause of death." This will only bring a salutary pressure to bear on the few practitioners who neglect to give such certificates as have hitherto been given freely by their brethren.

Where the persons deceased have not been attended by registered medical practitioners, and there has been no inquest, there is no provision to secure the certification of the cause of death in the Act; but this defect may be met to some extent, for under clause 44 the Registrar General, with the consent of the Local Government Board, is empowered "to make "regulations for prescribing any matters authorised by this Act to be "prescribed, and to revoke and alter such regulations."

In England every poor person, unable to pay for medical advice, can obtain the services of a poor law medical officer gratuitously, so that the day may not be distant when nearly every person dying will be attended by a registered medical attendant.

At present a certain number of educated practitioners holding good degrees are not on the register; and hitherto their certificates have been received by order of the Registrar General, who did not wish to bring any undue pressure to bear on them. But to comply with the new Act it will be desirable for them to register, as only certificates of registered practitioners are recognized under the above clause.

The refusal of certificates from quacks and pretenders will enlighten the public, and distinguish the qualified practitioner from the unqualified.

In several foreign states every dead body is visited by a medical inspector, who inquires into the cause of death, and grants a certificate, without which the burial cannot take place. As a measure of police this has some advantages. But under the Amendment Act the medical attendant is consulted, and is entrusted by the State with the duty of returning the cause of his patient's death; he performs in death from disease the office which the coroner executes in sudden deaths, or deaths from violence; and this arrangement, while it is most satisfactory to private families, is less costly, is probably most agreeable to the practitioner, and supplies more authentic information than could be procured from any other source.

Sometimes the medical practitioner falls into the error of the coroners of old, and omits some essential fact in the associated links of the cause of death. It is important to avoid this mistake. For example, measles is often followed by pneumonia, and other *sequelæ;* now measles is the primary cause of death in such a case, but it is rendered fatal by the supervention of pneumonia, which is one of its developments. The cause of death is, therefore, properly returned "measles, pneumonia." So when scarlet fever is followed by fatal dropsy the scarlet fever as well as the dropsy is properly returned. By error, death has been by some practitioners ascribed solely to pyæmia, peritonitis, or hæmorrhage, whereas these secondary diseases have sprung from precedent childbirth, which should never be suppressed.

A great variety of names are in use; but for the purposes of the national register, practitioners will do well to adopt the names in the excellent nomenclature of the Committee appointed by the Royal College of Physicians.

As pathology is continually advancing, changes necessarily supervene in what have been called the morbid units; and these changes have to be recognized in the certificates. Embolism, Bright's disease, hypertrophy of heart are now recognized diseases; they were a few years ago masked and returned under some of their prominent symptoms.

It is true that the disease of which a person dies is at times unknown; the medical practitioner has had inadequate means of observation; he may be imperfectly skilled in advanced diagnosis; or the symptoms may be indistinct, complicated, and only explicable by autopsy. In such cases the certified cause is vague; but it does not follow that the whole series of returns subject to such imperfections is useless. If the attainable though imperfect knowledge of disease suffices for the purposes of medical practice, it cannot be worthless for medical statistics.

The mortality of the year 1872 was below the average, and the diminution of activity was apparent in all the five classes of causes except the third.

I.—Zymotic Diseases.

The mortality from these maladies showed a sensible decline. Smallpox, which had been excessively fatal in the previous year, declined in virulence; but of it no less than 19,094 persons died. The mean annual mortality* to 10,000 in the 20 years, 1850–69, was at the rate of 2·04, whereas it was 10·24 in 1871, and 8·33 in 1872, and this after the most laudable efforts to extend vaccination by legislative enactments. The mortality by measles, scarlet fever, diphtheria, croup, and the various forms of fever was much below the average. Thus scarlet fever and diphtheria, instead of killing 10·46 in 10,000, as they did in the twenty years, were only fatal to 6·15; the fevers, instead of the average 9·18, were fatal to 6·12. Diarrhœa and cholera together were fatal to 10·05, which is as near the twenty-year average as possible. Whooping-cough was more than usually prevalent.

The enthetic order of disease, which is induced by inoculation of morbid virus, became more fatal.

To syphilis, 1831 deaths were referred; the average rate of the twenty years was 0·59, while in this year it rose to 0·80.

The dread disease hydrophobia, which had gone down to a low point, rose again, and was fatal to 39 persons in the year. It can only be reduced by stricter police regulations.

The dietic order of disease exhibits some changes; deaths referable directly to privation became less frequent; but more deaths than the

* Throughout these comments, by *mortality* must be understood the proportion dying in a year to 10,000 living, unless some other basis is mentioned. The average referred to is drawn from the 20 years 1850–69.

average in the 20 years, 1850–69, were referred to the want of breast-milk. The deaths from purpura and scurvy have grown more frequent since 1860 than they were in the previous 10 years. Alcoholism showed evident marks of decline; and we may hope ere long to see still less evidence of the effects of drinking to excess.

The parasitic order presents some changes; thrush declined, and worms and other parasites have been a little less fatal since 1870 than in the ten preceding years.

The mortality by the whole zymotic class was 50·86 on the average, and only 47·73 in the year under review.

The zymotic diseases replace each other; and when one is rooted out it is apt to be replaced by others which ravage the human race indifferently wherever the conditions of healthy life are wanting. They have this property in common with weeds and other forms of life; as one species recedes, another advances. By improving the hygienic conditions in which men live, you fortify them against infection; and further, by isolating the infected, the chances of attack are diminished.

II.—Constitutional Diseases.

Like zymotic diseases, these diseases, variable in their seat, are characterized by specific products, which are, however, not to the same extent capable of reproducing themselves in other bodies. Thus soft cancer is diffused over the body of its victim, but it is not like small-pox, infectious.

The constitutional diseases were fatal to 86,280 persons. The mortality was 37·68, the average being 43·12. Gout, the first of the diathetic order, is more fatal than it was, as a natural consequence of the increase of luxurious living among larger numbers of people. The decrease of reported deaths by dropsy is probably only apparent; the disease by better diagnosis being referred to the heart or other original source; and so, perhaps, the increase of cancer may be only apparent, as better means now exist of detecting it in internal organs. Be this as it may, the latter dreadful disease is much more commonly referred to in the Returns than it was; the mortality was 3·15 in 1850–9, became 3·87 in the next decenniad, was 4·29 in 1871, and 4·37 in 1872.

The tubercular is far more fatal than the diathetic order. The great central disease phthisis—commonly called consumption—is the most constant, the most fatal of all the diseases of the human race; the mortality by it alone was 22·97. This is a decline on previous rates, for the average was 26·38. But I reserve any further observations on phthisis until I have to notice the deaths ascribed to asthma and bronchitis.

III.—Local Diseases.

These diseases are pure inflammations and their sequels, giving rise to general disturbance, and producing changes in the tissues of particular organs; or they are functional disorders, such as insanity and neuralgia. Their mortality is increasing, and they were in the year fatal to 86·22 in 10,000; which is less by 4·27 than the mortality in the previous year, but is 2·89 above the average. The deaths by local diseases were 197,429.

The diseases of the nervous, circulating, respiratory, and digestive systems are the most fatal, as they affect central ruling organs on which the life of the individual and of the more remote parts of the organism directly depends.

The fatal diseases of the nervous system were slightly below the average, they amounted to 62,809, including convulsions 25,377, affecting children chiefly; apoplexy and paralysis together, 23,412; the two affections

running very much into each other, and resulting from lesions of the brain and spinal marrow. It is a curious fact that the deaths referred to each of the two diseases are nearly equal in number. Thus, 11,793 died of apoplexy, 11,619 of paralysis; many of the cases of softening and other affections of the brain are distinguished in the supplementary table (p. 150–1.) to which reference should be made in this and similar cases.

Among the uncommon causes of death shaking palsy may be cited, males 36, females 31; ophthalmia, males 14, females 16; otitis, males 45, females 14. One death of a male (55–65), and one of a female (20–25) are ascribed to catalepsy.

27,086 deaths are referred to diseases of the heart and blood-vessels; among them are 643 from aneurism, 603 from pericarditis, the larger proportion of cases specified being hypertrophies. In syncope 922 persons died. By embolism 136, a disease of recent discovery, and by the distressing angina pectoris 350 persons perished. The embolism was most fatal to women, the angina to men.

The diseases of the respiratory organs of all the local diseases are the most fatal; by them 73,393 persons died. 42,752 deaths are ascribed to bronchitis, 20,282 to pneumonia, and while the deaths by pneumonia (inflammation of the lungs), and asthma have decreased, those from bronchitis have increased steadily from 16,499 in the year 1847 to 32,347 in 1860, and to 42,752 in 1872. Here it is necessary to bring phthisis into account. That disease affects the intestines and other viscera, but its most prominent symptoms, the hæmoptyses, and the largest tubercular deposits are in the lungs, and it was often formerly, and is now sometimes confounded with chronic bronchitis. Hence we may inquire whether the increase of bronchitis is only apparent; whether what was formerly called phthisis, or popularly consumption, may not now be called bronchitis. In that case there should have been a corresponding decrease from phthisis, which has, however, not been observed. The deaths ascribed to phthisis (consumption) were 53,317 in 1847; 51,024 in 1860; and 52,589 in 1872. Taking the deaths from pneumonia, bronchitis, and phthisis together for the three years 1847–60–72, the numbers are 93,263, 108,635, and 115,623. The increase of population has to be taken into account, and this is done in calculating the rate of mortality. Now, dealing with the whole order, the mortality by respiratory diseases was at the rate of 30 and 34 in the two decenniads 1850–9 and 1860–9, by phthisis 27 and 25; by the two together 57 and 59. Thus there is an evident increase in the mortality by pulmonary disease.

The year 1872 was remarkable for a diminution in the respiratory mortality; which was due to the mild temperature of the winter, for while extreme winter cold long protracted, always increases, mild weather diminishes the mortality of bronchitis.

The breathing of dust, and of any mechanical substances, such as grit, and particles of steel evolved in grinders' or stonemasons' work, is known to produce diseases of the air tubes, called by various names; and it is thus exceedingly probable that the increase of deaths by bronchitis is due to the smoke, dust, dirt, and other matters in the air of towns and workshops where more people every year are doomed to breathe.

The practical inference is, that the most effectual means should be adopted, to purge the air people breathe of all impurities; hence fires should be constructed to burn their smoke, streets should be kept clean, workshops be well ventilated.

Intestinal disease is increased by the heats of summer, probably increasing the activity of disease matter in air and water, or in the organism itself.

The mortality ascribed to diseases of the digestive organs slightly declined, those by diseases of the urinary organs increased, and that notwith-

standing the sensible diminution of the mortality of stone by one of the most brilliant discoveries of surgery.

Since 1860–64 the mortality by the painful disease, ovarian dropsy, has diminished; it was then at the rate of ·13, from that it fell to ·11 in 1865–9, and to ·10, ·09, ·09 in the three last years. This may be fairly traced to the skill with which surgeons now extirpate the ovaries, the seat of the disease.

Addison's disease was fatal to 28 males, 29 females; the greatest number of deaths amongst males was at the age 35–45, and amongst females at the age 45–55.

The diseases of the integumentary system were fatal in 1311 instances, including 179 from eczema, 48 from pemphigus, 16 from impetigo, 20 from psoriasis, 13 from elephantiasis, 10 from lepra. What a contrast with the state of things when Europe was covered with hospitals for lepers!

IV.—Developmental Diseases.

These diseases are incidental to reproduction, growth, nutrition, and decay. They were the assigned causes of 75,287 deaths, and the rate of mortality under them was 32·88. Of the children born before their intra-uterine life was completed, 10,334 died from causes not specified; they were unable to struggle on into maturer life; 571 children died of cyanosis, the heart's formation remaining incomplete. Spina bifida—the vertebræ of the spine remaining incomplete—was fatal to 452 children; or to exactly the same number (452) as died from all other malformations. Among the deaths from these other malformations there were ascribed to cleft palate 61, anus imperforatus 167, both forms occurring in males more frequently than in females.

Teething is one of the first marked steps in development after birth, and by inducing convulsions and other irritative reflex diseases, it is chargeable with a certain number of deaths; the number so charged was 4093.

The second order of this class consists of the diseases incidental to reproduction. 99 deaths were referred to paramenia and disorders of menstruation; and 2403 to childbirth. This is exclusive of 1400 deaths by metria or puerperal fever. The total deaths of childbearing women by childbearing was 3803. These deaths are very deplorable; they require to be watched, as they are from very various causes, some of which are under control. Metria has been frequently induced by collecting many women into the wards of lying-in hospitals; that evil has been to some extent remedied, but it still exists. A very common cause of death is the want of skilled midwives, to which I have before called attention. A mother's life often hangs on some simple act which can be easily performed by a woman who understands the mechanism of delivery; in the absence of the skilful hand to perform that act she dies and carries out of life with her the unborn child. In some cases there is malformation, or displacement; and in others the powers fail despite the efforts of the highest medical skill; the resources of art fail in the great struggle. The day may be looked forward to when less than 49 mothers perish to every 10,000 children born alive. In the year 1872 the proportion was only 46. But this is higher than the 42 in the years 1857 and 1869; lower than the 60, 61, and 58 in the epidemic years 1847–8–9.

A certain number of women in the early stages of pregnancy die of small-pox, scarlet fever, and other diseases; the number so returned is 34.*

* See Table 11, p. 249.

An attack of small-pox, scarlet fever, or enteric fever is almost invariably fatal to a woman in the advanced stages of pregnancy, and is properly referred to those heads in the abstracts; 233 such deaths were referred to small-pox, 38 to scarlet fever, 33 to enteric fever, 18 to diarrhœa, 10 to rheumatism, and 3 to syphilis. 65 deaths were by pneumonia, and 1 death by intussusception. 131 deaths of pregnant women were ascribed to phthisis, 68 to heart disease, 19 to nephria (Bright's disease).

There is in some cases early in life simple debility, failure of vital force; in others reversion of the nutritive process, wasting away, atrophy, ending fatally. To this head are referred 29,983 deaths, exclusive of old age.

This wasting away, this debility, occurs naturally in old age, of which 26,900 persons died. The lamp of life was burnt out. Disease itself, as years wear out the body, is shorn of its symptoms which require strength for their manifestation; and it is probable that some of the deaths ascribed primarily to old age may have been preceded by pneumonia or other latent maladies.

V.—Violent Deaths.

In many cases death is evidently caused by mechanical force, or by some of its various changes. Thus in the year 46 persons were struck and killed by lightning. The electric force quenched the force of life. The circumstances of each death during the years 1867–72, so far as recorded, are printed in Table 13, pages 250–1, for the facts may probably be turned to account by physicists at some future time, and although man cannot everywhere arrest Jove's lightning, he can avoid the places where it is most apt to strike. The 46 is an extraordinary number of deaths; the numbers in the five preceding years having been 17, 11, 7, 19, and 28; after the year 1869 such deaths rapidly increased.

The deaths by violence of every kind were 17,257, and the mortality by them was 7·54; this is slightly below 7·64, the average mortality of twenty years. The mortality gradually rose from 7·42 in the five years 1855–9 to 7·70 and 7·97 in the two quinquenniads following. The deaths by violence bear a certain proportion to the quantity of mechanical force in use, unless special precautions are employed to meet new exigencies; and that force is increasing every year.

It will be borne in mind that the deaths of merchant seamen by *drowning at sea*, which amounted according to the returns to 2297, besides 67 in the Royal Navy, are not included in the above numbers.

The violent deaths are arranged in five orders, according as they are caused indirectly or directly by human agency; 15,162 deaths in the first order are referred to what has been called accident, but may be more properly called in many cases negligence; by battle, the deaths in the second order, no deaths have happily in England been caused since registration began; the deaths by homicide, in the third order, were 387; the deaths by suicide, in the fourth order, were 1,514; and the registered deaths in the final fifth order, by execution, were 10.

The mortality under the five orders was 6·62 by accident or negligence, 0 by battle, ·17 by homicide, ·66 by suicide, and ·004 by execution. This classification is based on the verdicts of the coroners juries which are, as has been shown, often reversed subsequently. The homicides, including infanticides, are perhaps overstated, and the suicides are understated, as in cases of doubt the deaths are referred to the first order. The deaths by suicide are stationary, and there is no reason to believe that the apparent is not a real decline of homicide. Assassination is happily not a crime to which the English race is addicted.

Some of the particular circumstances in which homicide and suicide were perpetrated are shown in the tables. Thus of the 237 persons murdered

111 were males, 126 females; 64 males and 66 females were under a month old; 8 more were boys, 15 girls, under 5; 4 were boys, 8 girls, (5—20); leaving 35 adult men and 37 women murdered over the age of 20. As in India more girls than boys were murdered. The returns show, that of the adult men 25, of the women 15, were murdered by wounds and mechanical violence; of the men one was drowned, of the women 2 were suffocated or strangled. It is difficult to draw any inference from the facts as the coroners omitted in their returns to state in 99 cases how the murder was committed; but it would appear that the men in proportion to their number are as often killed by mechanical violence as the women. No murder is ascribed to poisoning.

101 deaths of males and 49 of females are returned as manslaughters; they are all except 27 males and 9 females adults of 20 years of age and upwards. Of the 74 men manslaughtered, 50 were killed by wounds, blows, and other kinds of mechanical violence; of the manslaughters of 40 women, only 21 are referred to the same score. This may perhaps lessen the alarm some people feel at the imaginary increase of wife-murders.

Suicide was committed by 1095 males, 419 females; 6 of the males, 3 of the females, being over 10 and under 15 years of age; 36 of the men, 11 of the women, over 75 years of age.

The mode of suicide was not returned in 48 cases, 33 males, 15 females. Of the men 186 drowned, 438 hanged, 28 strangled themselves; 24 men, 19 women, threw themselves from heights; 217 men, 62 women, cut their throats; 11 men, 4 women, cut or stabbed themselves; 57 men, no women, shot themselves; 72 men, 66 women, poisoned themselves: laudanum, strychnia, prussic acid, and "vermin killers" were the most common poisons.

Among the deaths of the first order, due to negligence or, the true cause not being known, to what is called accident, there are, exclusive of deaths in mines, 1516 from suffocation, and 3004 from drowning. Of the cases of drowning, exclusive of 335 suicides and 8 murders, there were 2519 returned without any further detail; the insignificant word "found" occurring, however, in 1049 instances. Of the other males, 242 were drowned while bathing, 68 by falling from ships and boats into the water, 102 by shipwreck near the coast, so as to be buried ashore, 4 by immersion while skating or sliding, 63 by upset of boats; of the females distinguished, 2 were drowned while bathing, 2 by falling from ships or boats into the water, 5 by shipwreck, 6 by upset of boats.

Of the males dying by suffocation the mode is not returned in the case of 321 males; but 59 were choked by food, &c.; 273 were smothered under the bedclothes, and 155 were overlaid by mother. 19 died by chloroform. Among females suffocated, the mode of death was not stated in 260 cases; 16 were choked by food, &c., 232 were smothered under the bedclothes, and 171 were overlaid. Four women died by chloroform; or only a fifth part of the men who died by it.

The number of deaths by mechanical violence, exclusive of deaths in mines and on railways, was 5843, namely, 4575 of males and 1268 of females. The particulars when returned are given in the table (p. 196–215). It may suffice to state here that 226 were by horses or other animals, and 1239 by conveyances drawn by horses; of the latter cases 1048 were deaths of males and 191 of females.

There are two groups of violent deaths which have been separately distinguished since 1863, the violent deaths in mines, and the violent deaths on railways. These two great branches of industry are carried on under unusual circumstances, and without the utmost vigilance and skill they involve great sacrifices of life.

The mines are of two kinds, the coal mines, and the copper or other metallic mines, each kind involving its peculiar dangers. The danger of the

coal miner arises from gaseous explosions and from falls of coal, stone, and other bodies from the roof. The copper miner is free from the danger of explosion but deprived of the advantages of ventilation, he works in impure, heated air, which induces a peculiar form of lung disease, developed after a certain number of years exposure. Here we have to do only with violent deaths, which are much less common in copper than they are in coal mines.

The mortality by violent deaths in mines and on railways is shown in the two Tables annexed,* at the several ages, as calculated on the population living at those ages.

The second Table shows the mortality by violent deaths in mines as calculated on the respective mining population, and on the general male population of England and Wales.

With regard to the violent deaths of every kind on railways, either of passengers or railway servants, the mortality has been calculated on the whole population living at several periods of life. This may be compared with the loss of life in mines.

We have no means of determining the mean population exposed to risk on railways, but the number of railway male servants of every kind in 1871 was 84,625, including 13,715 engine drivers and stokers, 22,083 railway officers, clerks, station-masters, and 48,827 railway attendants and servants. This is exclusive of 45,070 railway labourers, platelayers, and navvies.

The number of railway journeys in 1872 was 423,000,000, exclusive of journeys by season ticket holders, making perhaps in the aggregate 500,000,000. Taking each journey as of 9·6 miles† and allowing half an hour for its performance, it follows that the average number of passengers exposed to risk through the year does not exceed 30,000. Adding the 30,000 to 84,625 the total number of persons exposed a year to risk, and among whom the deaths on railways may have occurred was 115,000. Now the deaths were 1160, so the annual rate of mortality was 11 in 10,000.

We have no means in the returns of separating the deaths of passengers from the rest, and there is reason to believe that the companies' returns in which this distinction is made are incomplete.

We do not know the mean ages of railway passengers and railway servants in the aggregate, but dividing the deaths at each age by the living at each age in the whole population, then it is seen that the mortality at seven decennial ages over the age of 15 differs little among men: the loss of life by violence on railways is at a rate slightly above 1 in 10,000; it is 1·0 at the age 15–25, 1·2 at the age 25–35.

It will be seen upon comparing the above figures with those made by the companies to the Board of Trade for the corresponding years that the latter were exceedingly defective, and I claim for the returns which have been made in your Reports, the merit of having called public attention to the excessive number of deaths among the railway staff, as the mortality of that meritorious class of men might be greatly reduced.

I have the honour to be,
Sir
Your obedient servant,
WILLIAM FARR.

To
The Registrar General.

* From 1847 to 1857, inclusive, premature birth and infantile debility were abstracted under one heading. In order, therefore, to establish something like uniformity in the above Table, the numbers against each of these separate headings have been estimated from the proportions which the numbers under each bore to the sum of the two in subsequent years, when they were

† See note on page 230.

in **England** in each of the **26 Years 1847-1872.**

	Violent Deaths (not classed)	759	739	725	..	..	2	6	7	8	7	14	10	14	13	12	12	7	8
	Sudden Deaths (cause unascertained)	223	185	178	160	145	146	136	138	147	162	153	173	165	137	140	143	140	135
	Causes not specified or ill-defined	159	167	120	†	†	†	†	†	†	†	†	†	†	†	†	†	†	†

In the three years 1855-57 Violent Deaths were not distinguished according to ORDERS.

* These rates have been estimated from the figures in Table 1, page 234, which are explained in a note.
† For the years 1858-72 the deaths of which the cause was not specified have been distributed pro rata over all the causes in the Table.

TABLE 3.—**Causes of Death in England in 1872.** Proportional Numbers dying from each Class of Causes, and from each Cause.

* The rates given in this Table for the various groups of years are the means of the calculated rates in the several years. Under some of the separate headings the means cannot be given for the entire period, as the classification in full detail has not been made during the whole 23 years. In a certain number of cases in each year the cause of death is not stated; in calculating the proportional numbers since 1853 these have been distributed pro rata over all the causes in the Table.

† Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population.

TABLE 4.* (*continued.*)—**Mean Annual Rate** of **Mortality** in **England** from each CLASS of CAUSES and from each CAUSE of DEATH during the **20 Years 1850–69,** and in each **Decade** and **Quinquennial** of that Period; also the **Rate** of **Mortality** in the Years **1870, 1871,** and **1872.**

TABLE 5.—**Causes of Death in England in the Year 1872,** arranged in the order of their fatality.

CAUSES OF DEATH.	Number of Deaths registered in the Year 1872.	*Proportional Number* from each Cause to 1,000,000 Deaths from All Causes.
Phthisis	52,580	107,619
Bronchitis	42,752	87,489
Atrophy and Debility	29,983	61,357
Old Age	26,900	55,048
Heart Disease	25,840	52,879
Convulsions	25,376	51,930
Diarrhœa	22,219	45,469
Pneumonia	20,282	41,505
Small-pox	19,094	39,074
Whooping-cough	13,806	28,253
Scarlet Fever	11,922	24,397
Apoplexy	11,703	24,133
Paralysis	11,619	23,777
Premature Birth	10,334	21,148
Cancer	9,993	20,450
Enteric Fever	8,741	17,888
Measles	8,530	17,456
Hydrocephalus	7,196	14,726
Fractures and Contusions (Accident)	6,974	14,272
Tabes Mesenterica	6,856	14,030
Liver Disease	6,061	12,402
Brain Disease	5,446	11,145
Dropsy	5,162	10,564
Cephalitis	5,054	10,343
Lung Disease	4,869	9,964
Teething	4,093	8,376
Croup	3,640	7,449
Simple Continued Fever	3,415	6,988
Sudden Deaths	3,103	6,350
Drowning (Accident)	3,010	6,160
Asthma	2,981	6,100
Bright's Disease (Nephria)	2,911	5,956
Kidney Disease	2,779	5,687
Enteritis	2,758	5,644
Epilepsy	2,667	5,458
Scrofula	2,587	5,294
Stomach Disease	2,551	5,220
Rheumatism	2,456	5,026
Childbirth	2,403	4,918
Burns and Scalds (Accident)	2,204	4,510
Diphtheria	2,152	4,404
Typhus Fever	1,864	3,814
Peritonitis	1,847	3,780
Joint Disease	1,832	3,749
Syphilis	1,831	3,747
Erysipelas	1,787	3,657
Jaundice	1,629	3,334
Suffocation (Accident)	1,568	3,209
Laryngitis	1,532	3,135
Metria	1,400	2,865
Mortification	1,297	2,654
Ileus	1,284	2,628
Hepatitis	1,269	2,597
Want of Breast-milk	1,213	2,482
Uterus Disease	1,081	2,212
Thrush	1,039	2,126
Hernia	1,013	2,073
Ulceration of Intestines	1,007	2,061
Pleurisy	977	1,999
Otherwise (Accident)	940	1,924
Dysentery	815	1,668
Simple Cholera	801	1,639
Insanity	801	1,639
Gastritis	790	1,617
Diabetes	769	1,574
Ascites	655	1,340
Aneurism	643	1,316
Nephritis	606	1,240
Pericarditis	603	1,234
Cyanosis	571	1,168
Hanging (Suicide)	566	1,157
Phlegmon	534	1,093
Purpura and Scurvy	518	1,060
Cystitis	473	968
Gout	460	941
Spina Bifida	452	925
Other Malformations	452	925
Skin Disease	409	837
Murder and Manslaughter	387	792
Intemperance	385	788
Ulcer	368	753
Intussusception	352	720
Drowning (Suicide)	335	686
Delirium Tremens	328	671
Stricture of Intestines	318	651
Cut, Stab (Suicide)	294	602
Influenza	278	569
Poison (Accident)	274	561
Stricture of Urethra	250	512
Calculus	207	424
Ovarian Dropsy	200	409
Carbuncle	190	389
Violent Deaths (not classed)	184	377
Worms	154	315
Cancrum Oris (Noma)	140	286
Poison (Suicide)	138	282
Otherwise (Suicide)	124	254
Cut, Stab (Accident)	118	241
Fistula	117	239
Quinsy	110	225
Spleen Disease	109	223
Ischuria	107	219
Paramenia	99	203
Other Zymotic Diseases	92	188
Synovitis (Arthritis)	92	188
Ague	84	172
Remittent Fever	82	168
Gunshot Wounds (Accident)	74	151
Privation	64	131
Gunshot Wounds (Suicide)	57	117
Chorea	53	108
Hydrophobia	39	80
Pancreas Disease	13	27
Hanging (Execution)	10	20
Glanders	7	14

Note.—The causes of 3,603 deaths in 1872 were not specified. In calculating the proportional numbers in the above Table these deaths have been distributed pro rata over all the specified causes.

TABLE 6.—**Deaths** in **each** of the **Counties** of **England** from **Scarlet Fever** for **each** of the **18 Years 1855–1872.**

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report. The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.]

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted, the districts have been re-numbered consecutively from 1 to 627.*

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 259) *and "Index of certain Towns"* (page 269).

A

Aberayron, 600.

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (570; 2) is the 2d Sub-District of the Wigton District, No. 570.]

Sub-District.	District.	No.
A		
Abbey	Bath	317; 3
Abbey Holme	Wigton	570; 2
Abbots Bromley	Uttoxeter	367; 2

ALPHABETICAL INDEX

TO

REGISTRAR-GENERAL'S THIRTY-FIFTH ANNUAL REPORT AND APPENDIX.

PAGES

AGES; of Persons married in 1872 xi

Mean Age at Marriage xi

Deaths of Males and Females registered at different Ages in England in each of the Years 1838–72. (Tables 20, 21, pp. lxxxi, lxxxii.) . . . . . xviii–xix

Mortality of Males and Females at different Ages in England in the Years 1838–72. (Tables 22–25, pp. lxxxiii–lxxxvi.) . xviii–xix

of 291,014 Persons married in 1872, distinguishing Bachelors, Spinsters, Widowers, Widows 26–28

at Death of Males and Females registered in 1872 in Divisions, Counties, and Districts 120–141

at Death of Males and Females in England registered from different Causes, in 1872 144–149

at Death of Males and Females in England registered from different Supplemental Causes, in 1872 150–153

at Death of Males and Females in London registered from different Causes, in 1872 154–159

(*See also* MARRIAGES, BIRTHS, and DEATHS.)

ALCOHOLISM. (*See* INTEMPERANCE and DELIRIUM TREMENS.)

APPENDIX TABLES 230–253

AREA in Statute Acres of each Division, County, District, and Sub-district . 30–84

of the Islands in the British Seas. (Table 46.) civ

of the sub-districts of London, *inclusive* and *exclusive* of Tidal Water. (Table 36.) xcv

in Acres and Hectares of the United Kingdom. (Table 44.) . . ciii

ARMY; Strength and Mortality of the Army at Home and Abroad. (Tables 50–57, pp. cviii–cx.) xxii

Average Strength of the British Army at Home in 1872. (Table 50, p. cviii.) xxii

Average Strength and Proportion per cent. of the British Army at Home and Abroad in each of the Years 1861–72. (Table 51.) cviii

Mortality of the Army at Home in 1872. (Table 52, p. cviii.) . xxii

Average Strength of the British Army Abroad in each of the Years 1869–72. (Table 53.) cix

Number of Deaths in the British Army at Home and Abroad, 1869–72. (Table 54.) cix

Annual Rate of Mortality per 1000 amongst Officers and Men in the Army at Home and Abroad, 1858–72. (Table 55.) . . cix

Strength at Home and Abroad in 1861 and 1871, showing the Numbers and Proportion per.cent. born in the different parts of the United Kingdom and elsewhere. (Table 56.) . . cx

Deaths in Army Abroad of Officers and Men belonging to Great Britain and to England and Wales, 1858–72. (Table 57.) . cx

PAGES

AUSTRIA; Average Annual Proportion to Population of Persons married, Births, and Deaths, 1853–72 xxviii

Marriage, Birth, and Death Rates compared with those of other European States. (Table 64.) cxvii

Estimated Population; Number, and Proportion to Population, of Persons married, Births, and Deaths, in each of the Years 1853–72. (Table 68.) cxix

BERLIN; Population, Deaths, and Death-rate in 1872 lvi

BIRTHS in 1872, exclusive of still-born xv

that escape Registration . . . . . v & xvi

of the two Sexes xvi

out of Wedlock, proportions in various Counties . . . xvi–xvii

in quarter ending March 1872 xxx

in quarter ending June „ xxxvi

in quarter ending September „ . . . . . xl–xli

in quarter ending December „ xlv

registered in England, and excess over Deaths, in each Year, 1838–72. (Table 1.) lxii

Legitimate and Illegitimate in England in 1842 and in the Years 1845–72, and Proportion of Males to Females. (Table 11.) . lxxii

proportion of Illegitimate Children to every 100 Births in the several Counties of England in each of the Years 1862–72. (Table 12.) lxxiii

registered in England in each Quarter of the Years 1838–72. (Table 13.) lxxiv

proportional Number of Births in each Quarter to 1,000 Births in the average Quarter of the Years 1838–72. (Table 14.) . . lxxv

in Counties, in 1872. Numbers, Sex, Legitimate and Illegitimate; Proportions of Male to Female Births, Legitimate and Illegitimate; Proportion of Illegitimate Births to Total Births. (Table 15.) lxxvi

proportion of Male and Female Children born in the several Counties of England during each of the Years 1862–72. (Table 16.) lxxvii

in Fifty large Town Districts in 1872. (Table 33.) . . . xciii

in Twenty-one large Towns of the United Kingdom in 1872. (Table 34.) xciv

in London in the Years 1859–72, distinguishing Males and Females. (Table 38.) xcvii

in the United Kingdom in 1872. (Table 44.) ciii

in the Islands of the British Seas in the Years 1851–72. (Table 46.) civ

of British Subjects at Sea, in the Years 1856–72. (Table 58.) . cxi

registered in each of the Divisions, Counties, Districts, and Sub-districts in 1872, distinguishing Males and Females and the Illegitimate 30–84

excess of, over Deaths in each of the Divisions, Counties, Districts, and Sub-districts in 1872 30–84

registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters of 1872 . . . 86–89

of Children born out of Wedlock registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters of 1872 90–93

in Foreign States. (*See* FOREIGN STATES.)

Illegitimate. (*See* ILLEGITIMATE BIRTHS.)

PAGES

BIRTH-RATE in England, 1838–42, 1868–72, and in 1872 xv
in England in each of the Years 1838–72. (Table 2.) . . lxiii
in England in each Quarter of the Years 1838–72. (Table 13.) . lxxiv
in Counties in each of the Years 1862–72. (Table 17.) . . lxxviii
in Fifty large Town Districts in 1872. (Table 33.) . . . xciii
in Twenty-one large Towns of the United Kingdom in 1872. (Table 34.) xciv
in the United Kingdom in 1872. (Table 45.) ciii
in Foreign States. (*See* FOREIGN STATES.)

BOMBAY; Population, Deaths, and Death-rate in 1872 lvi

BRONCHITIS; Mortality from 225

BRUSSELS; Population, Deaths, and Death-rate in 1872 lvi

BURNS AND SCALDS. (*See* VIOLENT DEATHS.)

CALCUTTA; Population, Deaths, and Death-rate in 1872 lvi

CAUSES of DEATH; of Seamen in the British Merchant Service in 1872. (Table 60.) cxiii
of Males and Females in England, at different Periods of Life, in 1872 144–149
(Supplementary Table) of Males and Females in England, at different Periods of Life, in 1872 150–153
of Males and Females in London at different Periods of Life, in 1872 154–159
of Males and Females in England, and in each of the Divisions and Counties, in 1872 160–183
(from certain zymotic and other Causes) in 1872, in the Divisions, Counties, and Districts of England 184–195
Dr. Farr's Letter to the Registrar General thereon . . . 219–229
desirability of verdicts by Coroners' juries being less vague . . 220–221
certificates of, by medical practitioners 222–223
registered in England in each of the Years 1847–72. (Table 1.—App.) 230–235
Mortality from the several Causes in each of the Years 1855–72. (Table 2.—App.) 236–238
proportional Numbers dying from each Cause in 1872. (Table 3.—App.) 239
Rate of Mortality from different Causes during four periods of Five Years, two Decades, and in 1870, 1871, and 1872. (Table 4.—App.) 240–243
in England, in 1872, arranged in the order of their fatality. (Table 5.—App.) 244

CENTENARIANS; deaths of reputed. (Table 19.) lxxx

CERTIFICATES of CAUSE of DEATH 221–223

CHILDBIRTH; excessive number of Deaths from 226
Deaths in 1872, at different Ages, of Women after Childbearing, classed under different Diseases, and neither referred to Childbirth nor to Metria in the Abstracts. (Table 10.—App.) . 248
Deaths of Women in 1872 who were returned as pregnant, classed under certain Diseases. (Table 11.—App.) 249
Deaths of Women from *Metria* and *Childbirth* in each of the 26 Years, 1847–72, and *proportional Deaths of Mothers to Children born alive*. (Table 12.—App.) 249
